6th. The last requisite I have to refer to is, non-liability to acquire a vegetable coating. No property in stone has been less examined than this. My friend, Dr. Balfour,* tells me, that botanists have scarcely yet looked into the question. There are two modes familiar to us all, in which stone acquires a coating of vegetable matter. One is, where the stone is continually wetted, and displays a bright green streak, such as we see in numbers of our buildings, that streak being occasioned by plants, of the order *confervæ*, clinging closely to the stone, and giving it an unpleasing colour. The other coating of stones is, where there is little moisture accompanying the development of vegetable growths. There it is mainly in the form of lichens. I do not know æsthetically any coating of stone which is less to be objected to; indeed, some regard it as a beauty; but looking at it from a chemical point of view, we object to the lichen. That there is a very marked difference between the tendency of different stones to become coated with vegetable matter, all must have noticed. I saw this strikingly illustrated some years ago, when not

† See p. 435, *ante*.

‡ The action of sulphuret of iron in decomposition under certain circumstances, is very powerful, as is shown in the production of artificial earthquakes, when a mixed mass of it is exposed under ground to the requisite heat, moisture, &c. May not some sudden and otherwise unaccountable disruptions and falls of the walls of buildings be thus produced where the material of which they consist may happen to contain an unlucky deposit of the disrupting or disintegrating agencies, exposed to the conditions favourable to their action?

* Professor of Botany in the Edinburgh University.

anticipating saying a word on the subject here, in the stones of Stonehenge. That great mysterious circle of stones, which I suppose we may say is at least 3,000 years old, as the Romans wondered at it as a strange thing when they saw it, consists in the large external range of sandstone, much like some of the whitest of those we have here, and it is only slightly spotted with lichens. I have since seen in Bute, dry stone dikes of limestone, probably not 200 years old, and there not only were the old stones spotted over with lichens, but even the gaps between the stones had been filled up with a rich vegetation. When the stone gathers much moss, that moss begins to crumble into a mould, in which plants of a higher character than lichens grow, so injurious, that botanists give them the name of *saxifrages*, or stone-breakers. These follow the growth of the original lichen on the stone. In Bute, also, I saw drystone dikes of trap rock, probably not older than those I have referred to, totally uncovered with vegetation, the bare stones lying on each other with not a growth upon them. In towns the accumulation of vegetable matter in buildings is less than in the country. They are less subject to those *conferroid* streaks, and the conditions of a town atmosphere are all less favourable to the growth of plants. There is, therefore, always less of it in towns than in the country, though it does occur in the former to some extent. This important point is to be recollected in connection with the growth of plants on stones, more in reference to the selection of rocks in quarrying, than to the injury which the stone suffers from being spotted with pleasing-coloured lichens. Stones which in the quarry, or elsewhere, readily acquire a coat of vegetation, and stones that crumble quickly into arable soil, are less suitable for building purposes than those which do not. A stone which quickly becomes a *nidus*, or nest of vegetation, must be one which is porous, absorbent of water, possessed of ingredients soluble in that liquid, and readily susceptible of disintegration by the atmosphere. The very coarse limestones, which contain magnesia, potash, soda, and phosphate of lime, crumble down to good soil, and plants readily grow on them. I think I can venture to assert with great confidence, that where in a quarry there are different kinds of stone, that one should be chosen which spots least with vegetable matter, and makes the worst soil when disintegrated, in preference to that which makes the best. It is the saving of building stones, in relation to plants, if nothing will grow *on* them. Buildings, however, are also injured, when the seeds of plants are carried up by birds and by winds into the crevices of stones and grow there. We see ash trees growing in this way, from their winged seeds being carried into the spaces between the stones. In India there is a well-known tree, called the *peepul* (*ficus religiosa*), resembling the banyan, which is considered as sacred by the people. The seed of it grows in the crevices between stones: the inhabitants will not meddle with the tree; and I am told that there are cities, now in ruins, where the singular power of this tree to overturn architecture, is shown in a remarkable way. This point, however, belongs rather to the consideration of mortar; for the seeds rather grow in the crevices between the stones of the wall than in the stone itself. It is, however, a curious point in reference to architecture and the durability of materials.

To recapitulate, then, a building stone should be compact, moderately hard, little liable to solution in water, little liable to decomposition by the atmosphere, little disposed to alter in colour, and not prone to acquire quickly a vegetable coating. Now, to secure these conditions, certain mechanical as well as certain chemical qualities are requisite. That certain mechanical qualities are essential, as well as certain chemical ones, is manifest from this, that two mineral masses may have the same chemical composition, and yet be very unequally acted on by the same agents. I gave you an example of that already, in iron pyrites, where we have one kind of it in one crystalline form, which remains unacted on, and will not dissolve in acids, neither in sulphuric acid nor nitric acid, and that does not become dimmed or tarnished after any length of time; while we have it in another crystalline form, which, as soon as it is brought into the air, changes to green sulphate of iron, and rapidly dissolves. In the same way, at Dartmoor, there is granite which they work for building purposes, and send to London, where it is now coming seriously to interfere with the sale of Peterhead red granite and Aberdeen grey granite, and which appears to be unalterable; while, at the same place, other masses of granite are found rapidly crumbling down by the action of the air, although not chemically different from the kind which does not so crumble down. In the same way the Bolsover magnesian limestone, which was selected for the Houses of Parliament from amongst an immense number of stones, as the best stone for building purposes, is assuredly not much acted on by atmospheric agencies, while other magnesian limestones go with great rapidity—the carbonate of lime dissolving out of them, and leaving the carbonate of magnesia. Some of these magnesian stones consist of multitudes of little grains, like the roe of a fish, cemented together; but they present a great diversity of surface to chemical agencies, downward from such magnesian limestones as our lithographers use, which are generally pretty nearly homogeneous in structure, and admitting of fine polish. Certain basalts, also, crumble with rapidity into fertile soil, whilst others are not acted on by the chemical agents in our laboratories, even with the assistance of heat, though we expose them to the fire for a very long time. The causes of these differences are obscure.

The chemical properties of stone are dependant chiefly on eight substances. Of these eight, six are metallic oxides—*i. e.* compounds of metals and oxygen, and they are what the chemists call bases. These six bases may be arranged in three sets or pairs. In the first place, there is a pair of calcareous earths, the one is lime, the other magnesia. This pair of bases largely occurs in building stones. The second pair may be familiarly called clay earth and iron earth. Clay earth is what the chemists call alumina, a soft white powder, forming a large part of clay. The sapphire is crystallized alumina, with a blue tinge; the ruby is crystallized alumina, with a red tinge. We may either give it the English name of clay earth, or the chemical name alumina. Iron earth, the other one of this pair, is oxide of iron. The third pair are the alkalis, potash and soda. You have thus six metallic oxides, which may be remembered as arranged in three pairs. Then there are two acids; carbonic acid, occurring so largely in limestones, and silicic acid or silica, forming the entire mass of pure quartz, and constituting from 98 to 100 per cent. of sandstone. In arranging building stones for practical purposes, we may divide them into two great groups, the one named from the bases, the other from the acids. The group named from the bases is the calcareous group, and we may more familiarly call it limestones. The second is named silicious, from silicic acid, which is a white powder like alumina, but with very different properties. The silicious group is represented by sandstones. Under the head calcareous, we include marble, all forms of ordinary limestone, and magnesian limestones. Under the head silicious, we have a much greater number—for example, quartz, flints, sandstones, granite (including syenite), the whole of our whinstones, the whole of our roofing slates and slate stones, with a few others of less importance.*

STEALING LEAD: CAUTION.—At the Middlesex Sessions, a few days ago, John Kirby was indicted for stealing seventy pieces of lead, the property of Messrs. Cubitt and Co. builders, in Gray's-inn-road. The prisoner was a carter in the service of the prosecutors, and on the 14th of last month he had to convey a load of old lead from Uxbridge House to their premises, and on the way he sent a woman to sell that which he was charged with stealing, at a marine-store shop in Cleveland-street. The person in charge of the shop refused to buy it, and the woman went away, leaving it there. Shortly afterwards, the prisoner called for the lead, and he was given in charge. The jury found him guilty, and Mr. Witham sentenced him to hard labour for six months.

* To be continued.

CHEAP AND EFFICIENT HOUSE-DRAINAGE.

THE present Metropolitan Commissioners of Sewers appear to have warmly embraced the principle of Combined Tubular Back-drainage, enunciated last year by Mr. F. O. Ward, in a letter which Lord Palmerston forwarded to the late Commissioners; and which, it may be remembered, led to their resignation *en masse*. The bye-laws adopted by the late commissioners in favour of costly separate drainage, and against cheap combined drainage, have been rescinded by the existing commissioners; who have also abolished the heavy "frontage charges," levied by their predecessors, for permission to join house drains to the sewers. Builders know, to their cost, that the enforcement of the separate system of house drainage operated in many cases to double or triple the expense of the work; while the frontage charges, as they are also well aware, added a further heavy percentage to the outlay. The expense thus imposed upon house proprietors desirous of abating nuisances and improving the condition of their tenants, amounted, in many cases, to a virtual prohibition; which the policy adopted by the present commissioners has removed. Large numbers of applications for permission to drain houses in groups, according to the new system, have, in consequence, been sent in to the present commissioners; by whom, in a multitude of cases, the requisite authorization has been granted. The reduction of cost thus secured to the public already amounts to some thousands of pounds; while the sanitary benefits resulting to the families whose dwellings have thus been provided with efficient drainage, are incalculable. The House-drainage Act, passed three months ago, and now in successful operation, greatly facilitates the work, by enabling the Commissioners to make advances (recoverable by easy instalments) to parties having houses to drain, but not possessing capital enough to undertake the work without pecuniary aid.

The advantages which have marked the adoption of the new policy afford reasonable ground for believing that the Central Board, which is next year to supersede the present Commission, will act on similar principles, and will refrain from re-imposing the obnoxious restrictions and charges of a bygone period. As, however, nothing future can be regarded as absolutely certain, the present is an opportunity of which builders and others should avail themselves, to secure legal authority for the economical drainage of their houses in blocks, and for the connection of their drains with the sewers free of frontage charge. The present dry cool weather is, moreover, particularly favourable for drainage works; the price of pipes and other materials has fallen considerably this year; and the readiness with which well-drained houses let, to a better class of tenants, paying better rents, with greater regularity, holds out (in addition to motives of humanity) a prospect of increased pecuniary gain to housecowners,—especially to those whose property consists in the lower class tenements. We are acquainted with instances in which the outlay of 5*l.* each in improving the drainage of a block of houses, has raised the rent obtainable 2*l.* per house per annum; at the same time securing abundance of applicants, and obviating sickness, so that the houses no longer stand empty as they used, and the occupants are not hindered by illness from punctually paying their rents. In one of the cases to which we allude an outlay of 200*l.* on forty houses has produced a positive improvement of the annual revenue estimated by the agent at upwards of 120*l.* a year. Although, therefore, we do not apprehend that any future body will reverse the policy adopted by the existing commission, we yet advise such of our readers as are interested in house property to seize an opportunity which *may* never recur under such favourable circumstances, of improving, on easy terms, their tenants' condition and their own receipts. These remarks are peculiarly applicable in the case of property situated in the various courts and alleys in which the present Commissioners are now laying down self-scouring tubular sewers, instead of the old brick sewers: for, a considerable saving is effected by branching on the private house drains to the

public sewer while the trench for this is still open and the pipes are being laid. As a further motive for taking advantage of the present favourable conjuncture for effecting what has been well called "Basement Reform," we may mention that those who let slip the facilities for house drainage afforded *now*, will, on the 1st of January, come under the compulsory clauses of the new Act,—the powers of which, in this respect, are of a stringent character.

THE DECORATIONS OF CHIRK CASTLE.

ON my return to England, my attention has been directed to an article in the *Builder* of August 18, giving an account of the proceedings of the Archæological Institute at Shrewsbury, and describing a visit to Chirk Castle, as follows:—"We then proceeded to Chirk Castle, the seat of Colonel Myddleton Biddulph. We were struck by the grandeur of the view, more than by the architecture, which has been restored. But if we were indifferent to the exterior, our horror was great at the interior. Ionic columns, supported on deep blue balusters, led us into a room, the walls of which were bright green and gold, and the ceiling of bright blue. It was stated that it is a moot point whether the responsibility of these decorations rests on Mr. Pugin or Mr. Crace: whichever way the question is settled, the result will certainly bring no fame to either."

I feel called upon to reply to these remarks, and trust you will favour me by inserting this letter.

The late Mr. Pugin directed the architectural restorations at this fine old building, considered to be one of the most interesting specimens of the ancient Border Fortress. I carried out the various decorations of the interior, subject to the approval and directions of Mr. Pugin, and most fully appreciating the value of his suggestions throughout. The remark as to the staircase is simply an error. The columns do not rest on blue railings: they rest, as they did more than a hundred years ago, on a good solid base, and the railings merely abut against them. The room to which the article refers is thus decorated. The aspect being south, and a series of valuable portraits having to be arranged on the walls, a paper was selected of a deep warm green flock, on brown leather ground, relieved with gold. The ceiling is divided by large intersecting beams into fifteen panels: in each panel is an allegorical painting in relievo, on a dark olive ground. These paintings, being curious, were to be preserved, and properly brought out in the decoration. We decided on a deep blue for the grounds of the panels, the ornaments surrounding the paintings being vellum colour, relieved in parts with gold. The beams of the ceiling, forming also the cornice and facia, were made oak, the carved ornaments lime-tree, the main mouldings being solidly gilt, and the ground of a wreathed enrichment, picked in dull red. The ground of the carpet is maroon: the curtains are maroon, green, and gold, of silk and worsted tapestry. I am particular in describing the decoration of this room, as my only defence against an attack somewhat coarsely made. Anybody who understands colour will perceive that a warm green wall, nearly covered with portraits, can be perfectly well made to harmonise with a blue ceiling. Any two colours may be brought together by a proper modulation of tone, and interposition of suitable contrast between them.

Our garden flowers will give many examples of most beautiful yet rather unorthodox contrasts of colour; so likewise the plumage of the exotic birds; and what can be more gorgeous, and yet more harmonious than the tail of the peacock, with its shades of mingled blue, and green, and gold. The illustrations of Mr. Gruner's work give examples, showing that blue and green can be made to harmonise well together; and I would refer to a ceiling of the Palazza Vecchio, at Mantua, where these two colours predominate. I am not arguing for these colours in preference to other colours, but I am defending the use of them, and showing that an artist, with proper study and intelligence, may never fear any difficulties of contrasts, if he will apply his mind to the rules of harmony, and his eye to the beauties of nature. I cannot close my letter without expressing the pain I feel at any attempt to cast a slur on the late A. W. Pugin, a man whom it was my pride to know, and whom to know was to esteem, to love, and respect, as a most warm-hearted kind man, and the greatest genius that has appeared for many an age in the world of art.

JOHN G. CRACE.

*** There was no attempt whatever to cast a slur on the late Mr. Pugin. Able as he was, that architect, like other men, was not always right. In the present case the question is, whether or not the difficulty attending the harmonious conjunction of blue and green is successfully overcome. Our correspondent says not; and (with the best opinion of Mr. Crace) his statement remains just where it was.

THE ARCHITECT OF THE EAST-INDIA HOUSE.

THE additional information relative to Holland, the architect, with which Mr. Hodson has supplied you, is a truly welcome contribution to the scanty notices we at present possess respecting the architects of that day. It certainly settles the *vexata questio* as to the authorship of the design of the East-India House, and for which there ought never to have been any room. But Holland seems to have been singularly indifferent to fame, nor has much regard been paid to his reputation by others; for it is equally strange and provoking to find his truly miserable design for the first pavilion at Brighton inserted in Richardson's "New Vitruvius Britannicus," while the India-House, Carlton House, and the charming little screen façade of Dover House, are omitted. The last-mentioned piece of architectural design,—which, by the bye, would have been all the better had the order of the portico been carried up higher than that of the wings, so as to bring the lower line of its entablature on the same level with the top of the other,—seems to have been carefully shunned by architectural draughtsmen and illustrators. I have never met with but one view of it, and that is in "Malton's Picturesque Tour through London and Westminster," where it does not show at all to disadvantage, but gains in importance, owing to the view being all but completely confined to it.

AMATEUR.

PROVINCIAL NEWS.

Chelmsford.—The arrangements for securing a new corn-exchange, near the Shire-hall, are, it is said, almost completed. The spot now fixed upon is in the square.

Portland.—A new pier has been built by the government at Portland, for the use of steam-boats plying to Weymouth. It is constructed on piles.

Bristol.—The foundation-stone of a building intended for national schools in the district of St. Matthias, was laid on Thursday before last. The school-house will be in the Decorative style, in accordance with the architecture of the church. It will be built of native Hanham or Stapleton stone, with Bath stone dressings. The boys' school-room will be on the ground-floor, 64 feet by 18 feet, and the girls' room on the first-floor, and of same size. Behind these rooms there will be a class-room, 28 feet by 18 feet. Adjoining will be a dwelling-house for the teachers.

Chester.—The Earl of Shrewsbury's premises in Eastgate-row lately occupied as a toy-shop have been pulled down, and, according to the plans and under the superintendence of Mr. Penson, architect, a new shop has been built for a bookselling firm. The architect has adopted for the exterior design to the street, a timber and plaster gable, such as flourished in the fifteenth and sixteenth centuries, and one of the greatest characteristics of the original architecture of the Rows. This gable is filled in with net-work and tracery, portions of which are decorated with carvings. The barge-boards, pinnacle, and string-courses are also ornamented, and the pinnacle surmounted with a fane, bearing the monogram of the firm. The interior decoration of the shop and shop-front is Elizabethan. The works are yet incomplete. The external ornamentation of the shop-front is formed of four pilasters of Caryatides, supporting an entablature. The design for the completion of the stall and approach to the street, for the present, is in abeyance. The constructive works are by Mr. Bellis, builder. Mr. West, of Wolverhampton, was employed in the ornamentation.

Birmingham.—The ceremony of formally opening the free industrial schools-rooms, in Gem-street, took place on Monday before last. The building cost upwards of 4,000*l.*

Warrington.—The foundation stone of the new museum about to be erected in Bold-street was to be laid on Thursday.

Glasgow.—The new suspension-bridge at the Glasgow-green is opened for traffic. The whole cost, including Parliamentary expenses, was 6,500*l.* and it is believed that the half-price of occasional passengers, and the 2d. a week of daily customers, will, at no distant date, enable the council to throw open the bridge to the public free of any charge. The length of the bridge is 230 feet, the width between the rails 15 feet, and the height of the columns 24 feet. ——The upper quays now in course of formation between Victoria and Glasgow bridges, with the streets and buildings behind, occupy the site of the Old Green, which, 90 or 100 years ago, was the fashionable promenade of the inhabitants, to the neglect of the present Glasgow-green. Almost all this old green had been feued out by the town council previous to the close of last century; but by the foresight of a magistrate, it was stipulated in the feu contracts that, should the river-side ground, which was laid out as a pasture field, be required at any future period for harbour purposes, it should be restored to the council at the price originally paid to them for it, which was a very moderate one. The stipulation was agreed to by the feuars without any great difficulty, as it was considered quite out of the question that there should ever be any need for harbour extension in this direction. The result is that this valuable piece of ground, in the very heart of the city, has been re-acquired without the bother or cost of jury trials, or without paying ten times the original cost, as has been pretty nearly the case with some other river trust acquisitions.

CANADA WOODWORK.

THE *Times*, in one of its articles on the Paris Exhibition, speaks very highly of the Canadian department:—"There are sections, sound to the core, of the trunks of all the most useful timbers of commerce, including oak, yellow pine, black walnut, maple, beech, birch, cherry-tree, and hickory, and, close beside the wood itself, its manufactured products, turned out by machinery at a price which, even to Englishmen, with their wealth of mechanical appliances as compared with other countries, appears fabulously low. There are window-frames complete, with jalousie blinds on the French patteru, for 7*s.*; and doors with their framing, ready for use, for 16*s.*; and mouldings, 8 inches wide and 100 feet long, at the same price; and capital oak wheel-spokes for 5*d.* each; and beautifully turned and shaped handles for axes in the best material for 6*d.*; and oak flooring, ready made, at 20*s.* per 10 square feet. Even the waste of this branch of manufacture has, in a careful spirit of industry which cannot be too highly commended, been overhauled, and among the objects to which the attention of the European markets is thus invited gigantic shavings, which give some idea of the scale of the operations in wood, are included. In other portions of the space are exhibited a number of objects further illustrating the advanced state and capabilities of this branch of colonial industry, and among them may be specially mentioned a good, strong wooden bridge of 150 feet span, costing only 600*l.* and the parts of a strong box for packing sugar, which go into the smallest possible space when in pieces, can be put together when required at once, are much better for stowage and in every other way than hogsheads, and cost only 2*s.* Following up this subject of manufacturing in wood, we find the Canadians exhibiting, at the opposite end of the Annexe, some excellent and ingenious machines for working in this material. One of these, shown by Mr. Munro, is capable of performing seven different operations in planing, tonguing, and grooving. Another, for heavy ship carpenters' work, by Mr. Rodden, besides its special merits, points to what the colony is doing in the formation of a commercial marine; and besides these there is an ingenious nail-making machine and other interesting objects."

CLUSTER OF PILES, MARGATE PIER.

MARGATE NEW PIER.

There are few Londoners of a certain age who do not remember "Jarvis's Landing-place" at Margate. It did its duty for a time, but falling into decay, and involving annually much outlay for repairs, a new pier was determined on; and a competition being invited, the plans sent in by Messrs. Birch were accepted. We have at different times noted the progress made, and to some extent described the structure. We now give a view of it, sketched on the spot, and the following more complete particulars. The pier commences at the Droit-office: the width at entrance is 84 feet: this part is curved. it gradually narrows to 20 feet at a distance of 180 feet from its commencement, and is supported on twenty-three cast-iron piles, 12 inches in diameter, driven on an average 10 feet into the chalk. On the top of these cast-iron piles are placed seven wrought-iron girders 18 inches in depth, varying in length, being placed transversely according to the width of this part of the pier. On the top of these girders the timbers are placed, being 14 inches by 9 inches, running longitudinally, and on the top of these timbers is the platform. From this point the pile runs in a straight line for 950 feet, and this portion of it is thus supported on iron piles 16 inches in diameter, and placed in clusters of five, with one pile placed in the centre: each cluster is braced and tied together with wrought-iron braces and tie-rods.

Our second sketch shows one of these clusters more at large. There are 14 such clusters, 72 feet apart from centre to centre. The piles are driven 10 feet into the chalk, each pile being in three lengths, measuring on an average 40 feet when put together: the joints of the piles are bored and turned to fit correctly, and bolted together by flanges. This part of the pier is of the uniform width of 20 feet. The upper portion of the piles is cast with a bold moulding and flange 3 feet from the top: on this flange rests a timber cap, 3 feet broad and 14 inches deep, connecting the two piles together. On each side on these caps are placed two logs of timber, running transversely, connecting all four piles together: on these are placed two more timber caps similar to the foregoing, and on these rest the two large girders, made entirely of wrought-iron 4-feet deep of boiler plate, $\frac{3}{8}$ths of an inch thick, with large angle iron on each side, top and bottom, 6 inches, equal sided, making the top and bottom edge of these girders 12 inches broad. The platform is supported by these girders, which also form a parapet on each side nearly 3 feet high, on the top of which is an ornamental rail 12 inches high, running the whole length of the girder. The timber sleepers on which the planks are laid are bolted on the inside of each girder to wrought iron brackets, and rest on the bottom angle iron at every 6 feet. On these sleepers are laid the planking running in the direction of the girders. The pier head is in the form of a parallelogram, 110 feet long by 45 feet broad, supported on fifty-seven screw piles, of solid wrought iron, $5\frac{1}{2}$ inches diameter, and 20 feet long, with a screw cast on the bottom end 30 inches diameter. The top end is turned conical, to receive a cast iron cap, which is bored out to fit, and keyed on with two wrought iron keys screwed into the chalk rock 10 feet. On the top of the cast iron caps are placed timber sole pieces on sleepers, each sleeper composed of four logs bolted together, and 45 feet long, running transversely: there are twelve of these sleepers, which support the same number of timber frames 10 feet apart, braced together by longitudinal and diagonal timbers, various sizes and lengths, the top of these frames being covered with planks corresponding with the rest of the pier. There are three landing stages at the head, so placed as to allow the steam boats to land and embark passengers at any time of the tide. The staircase is in the middle of the head, 13 feet wide, of easy ascent and descent. The pier is 14 feet above high-water mark, of ordinary spring tides. The total length is 1,240 feet, giving a promenade of upwards of 30,000 superficial feet. The first pile was driven on the 3rd of May, 1853, by Mr. G. Y. Hunter, chairman of the Pier Company, and the last pile was driven on the 3rd of March, 1855.

Whatever may be its mechanical sufficiency, the ugliness of the new pier is unquestionable.

Ireland.—A court-house and police-barrack are in progress at Dundrum, county Dublin, for the Right Hon Sidney Herbert, M.P. Messrs. Deane and Woodward, architects.

VIEW OF MARGATE PIER.

TRAPS PECULIAR TO LONDON.

OUR pavements, laid over 1,000 miles of vaults, are dotted, at intervals of nine yards or less, with round iron plates: the old ones are worn smooth as the half-polished *cove* at your fireside. Peripatetics, beware of them: they are as slippery as glass when half frozen or greasy with mud: when an orangepeel lying on the disc catches your tread, then a somerset is certain; but oh! most specially beware when a coal-waggon is drawn up to the curb: take heed to your ways: the porter is gone down to prepare the cellar, the trap is removed, and has rolled perhaps to the kennel: if you are looking inward, or even askance, down you go to the hip. This occurred to a friend in Hyde-park-square lately. Really, some obligation ought to be imposed on porters while delivering coals, to place a firm stand or guard around the aperture (before the plate is removed), so as to admonish, if not forcibly arrest, the unwary. Suppose a low frame, square, and only 1 foot or 18 inches high, on which to rest the sack, and thus ease the shoot and the shooter. Until some such sanitary provision is made (and it is recommended as being more utilitarian than the ponderous swinging *unused* balance, with its 2 cwt. weight), these accidents will occur.

There is, however, another trap, more frequently annoying, in the guise of projecting sun-blinds to shops: these protrude various distances into the street, from 5 to 15 feet. On the sail-cloth is painted the trader's name—a fair way to *canvas* for business, if at a proper elevation; but they are often no more than 5 feet 6 inches from the flags!

I am 5 feet 10 inches in my boots, and have had my hat frequently knocked off,—picked it up, mayhap soiled, and as the injury was unintentional, walked silent off. Lately, however, in Edward-street, Portman-square, sidling rather closer to the shops, to avoid the sloppy way, a sudden blow between the eyes stunned me, and sent my beaver flying: as the obtrusion of the iron rod seemed levelled at my optics, I went into the shop and remonstrated, but the proprietor replied that it covered his own ground!

Now there certainly is a sort of platform, about 5 or 6 feet wide, elevated some 3 or 4 inches over the pavement, formerly an area, which for many houses lies open to the causeway; but this would seem to be, to all purposes, if not intents, a "trottoir:" what Puffendorff, Vatel, Grotius, or the surveyor of highways may judge is another matter.

My remonstrance was derided, and as a *gent* (smoking a cigar) sided with the dealer's views of his private estate in the public way, I walked away scathed, but not convinced.

Ought not the perambulating parish authorities to mete and regulate these growing innovations? They are evidently on the increase, and as coming events *cast their shadows before*, timely precaution may save from cerebral violence and capital punishment, many a

"VIATOR."

STORIES OF BELLS.

IN the course of a paper on Bells recently read,* the Rev. A. Gatty said,—Bells were supposed to have the power of ringing of their own accord; so we are told that when Thomas A'Becket was murdered in Canterbury Cathedral, the bells rang without being touched.

When La Bonne Florence, of Rome, approached the church of Hilarius, we are told that—

> "When that sche came nere the place,
> The bellys rang thorow Gody's grace,
> Wythowten helpe of hand."—*Ritson.*

When Hugh of Lincoln was buried, it is said that—

> "A' the bells o' merry Lincoln
> Without men's hands were rung;
> And a the books o' merry Lincoln
> Were read without man's tongue;
> And ne'er was such a burial
> Sin Adam's days begun."—*Jamieson.*

Blind Harry tells us of strange bell commotions when William Wallace died, and in Scotland bells are still supposed to ring "untouched by mortal hand" on momentous occasions.

The great bell of the Cathedral of Saragossa, in Arragon, used to toll of itself, says the legend, just before the King of Spain died.—

> "The bell of Arragon, they say,
> Spontaneous speaks the fatal day."

In the little bay of St. Gowan, near Tenby, you are shown what are called the ruins of this saint's hermitage. In the small oratory attached he hung a sweet bell, whose sound was audible far out at sea. Some godless pirates heard its pleasant tones, and resolved to make it their booty, so they landed, tore the little bell from its turret, and hurried with it to the beach; but as they bore it along it grew so wondrously heavy that they were obliged to rest it on a stone. This stone is reported to have retained ever since a ringing sound when struck, and the tourist to this spot finds his guide place a hammer in his hand, and bid him strike a hollow stone, whilst he reverently tells him the legend of St. Gowan.

At Aberbrothok, on the coast of Forfarshire, was an abbey dedicated to Thomas A'Becket. One of the abbots placed a bell on a floating frame over the Inchcape Rock, which lies a little distance out at sea, and which was a frequent cause of shipwreck to passing vessels.

> "When the rock was hid by the tempest's swell,
> The mariners heard the warning bell,
> And then they knew the perilous rock,
> And blessed the prior at Aberbrothok."

A pirate captain resolved to destroy this protective signal, so one day when the sea was calm, and the floating bell-frame at rest, he lowered his boat and cut away the bell, which at once sank into the sea. Exulting in the mischief he had accomplished the pirate sailed away; but ere many years had passed, his vessel, laden with booty, was again in the neighbourhood of his evil deed. It was night, and a terrific tempest was raging. He thought he was near the old spot, but was not certain, and spoke to his helmsman—

> "Canst hear, said he, the breakers roar?
> For yonder, methinks should be the shore;
> Now where we are I cannot tell,
> But I wish I could hear the Inchcape bell."

For a moment the black heavens were gashed over with lightning, and on the near shore the Abbey of Aberbrothok became visible, whilst below and around the breakers were white with foam. Too late to alter the course of the vessel, she struck upon the rock and foundered, whilst the drowning pirate heard—

> "A sound as if with the Inchcape bell
> The devil below was ringing his knell."

Of the bells in Limerick Cathedral, Mrs. S. C. Hall has preserved a very touching legend. They are said to have been founded by an Italian, who was an enthusiast in his art, and devoted himself to making them a surpassingly melodious peal. They were finished and suspended in a monastery, near which this founder took up his residence, in order to enjoy their daily sound. War desolated the country, the monastery was razed to the ground, the bells sold, and the population scattered. The enthusiastic bell-founder himself became an exile. Haunted, even to his old age, by the memory of his favourite bells, he determined, if possible, to hear them once again. They had found their way to Ireland—a country always famous for its bells—and the ship in which the exile sailed in pursuit of them dropped its anchor in Limerick Pool, two miles below the city. He took boat and rowed up the Shannon, when the towers and turrets of the cathedral rose into view. The rowers paused to give their passengers a view of the noble building. As he gazed the chimes of the cathedral clock sounded the very bells which he had most loved and longed after. The old man leaned forward as if to hear them more distinctly, and the garrulous boatmen were silent and subdued by the fixedness of his look. Alarmed by his continuing motionless they again stretched to their oars, and soon reached the landing-place; but when they would have helped him ashore they discovered that his life had already passed away with the chimes.

There is a fine bell at Trinity College, Dublin, for which a handsome turret has recently been erected. A story is told of Dr. Barret with regard to this bell, that when asked by a company who had been drinking various toasts, to give his belle as a toast, he said, "I'll give you the college bell, for I believe there is no belle so fine as that."

There are many interesting customs and charities connected with bells at the present day.

At Dewsbury a bell is tolled on Christmas Eve as at a funeral, or in the manner of a passing bell; and any one asking whose bell it was, would be told that it was the Devil's knell. The moral of this is, that the Devil died when Christ was born. The custom was discontinued for many years, but was revived by the vicar in 1828. Amongst the sweet bells of Dewsbury is the famous "Black Tom of Tothill," which is said to have been an expiatory gift for a murder.

At Thruxton, Herefordshire, there is a piece of ground called the Bell-acre, which from ancient times has been let, and the rent applied in the purchase of bell-ropes.

At Ecclesfield Church a bell is rung at six o'clock in the morning, again at twelve, and again at eight in the evening: the curfew, on Saturday, is always rung at seven. The sexton receives a yearly payment, charged in the churchwarden's account, and the poor, especially, derive accommodation from these convenient notices. It may be remarked here that the curfew ought properly to be *rung*, not *tolled*; hence Gray and Moore err in their poetical descriptions when they say—

> "The curfew *tolls* the knell of parting day,"—

And—

> "Faintly as *tolls* the evening chime."

Scott, on the other hand, says correctly—

> "When Hawick he passed, had curfew *rung*."

CHURCH BUILDING NEWS.

Norwich.—An Early English three-light window has just been placed in the east end of the church of St. Faith Newton, having been executed at the expense of Mr. R. Twining, of London, as a memorial of some members of his family. The design is the early scroll ornament, filling geometric forms, with the figures—Faith, Hope, and Charity,—one in the centre of each light, and each light surrounded by a border. At the bottom are initials. The work was entrusted to the Messrs. King, of this city.

Tofts (*Norfolk*).—An entire new chancel is being added to this beautiful church, which, when completed, will measure 48 feet long by 21 feet wide. It has a small chantry on one side, and a vestry and organ-loft on the other. The material used is flint, with Bath stone dressings. The interior ashlar is local clunch stone, The internal arches, window moulds, &c. are in Caen stone. The ceiling will be panelled, with carved oak bosses at the intersections of the ribs. It will be fitted up choirwise, with carved oak stalls, for thirty persons. There will also be sedilia, piscina, &c. &c. The altar, we are told, will be worked entirely in alabaster and coloured marbles. In short, no expense, it would appear, will be spared. The work is being carried out at the sole expense of John Sutton, Esq. of Cambridge, from the designs of Mr. E. Welby Pugin. Mr. G. Myers, of Lambeth, is the builder.

Winchester. — At a recent meeting of the parishioners of St. Thomas and others, interested in raising a suitable memorial to the late rector of the parish, it was unanimously resolved, according to the *Hampshire Advertiser*, to finish the church by completing the tower and erecting a spire thereon. A committee was also appointed to wait upon the parishioners, and ascertain the amount of pecuniary aid they would render towards carrying out the desired object. The Dean and Chapter intend giving 100*l.* and the Warden and Fellows of the College 50*l.* towards the cost of completing the spire. The cost will be about 1,200*l.*

Dorchester.—On 7th instant were formally laid the foundation-stones of the two chapels in the new cemetery now being enclosed at Dorchester.

Shrewton.—The consecration of the restored parish church of Shrewton took place on Wednesday before last. The church was built from the plans and under the superintendence of Mr. T. H. Wyatt. The tower, one arch of the nave of the former church, the piers of the

* The paper will be found printed in full in the *Leeds Intelligencer*.

chancel arch, and two lancet windows, which were found walled up in the former chancel, have been retained in the new building. The style of the several parts of the new church was determined by remains of the former one, the nave and chancel being of earlier character than the aisles and tower. The nave is lighted by a clerestory of three trefoil-shaped windows. The western tower arch is open to the body of the church, separated, however, by a carved wood screen. The floor of the tower is used as a ringing place. The east end of the north aisle is divided off as a vestry by a screen, and the whole church fitted up with open seats of stained deal. There is a wooden roof, both to the nave and chancel, of stained deal. The carving of the corbels and other stonework was executed by the Messrs. Howitt. The pulpit, desk, lectern, and chancel seats, are of carved oak. The materials are flint and ashlar stone. The chancel is paved with encaustic tiles. The communion rails are of ironwork, by Potter. The dimensions of the church are 75 feet by 40 feet; and the accommodation is for 363. All the sittings are free. The east end of south aisle is adorned with a window of stained glass. It contains two lights, one filled with a full-length figure of St. Peter, the other representing St. Paul. The total costs of the works at present undertaken are estimated at less than 1,808*l*. The vicar and churchwardens are, it is said, anxious to complete the work by the restoration of the tower in the erection of a spire, which is much needed, but there still remains a deficiency in the funds provided for the work already accomplished.

Ipswich.—The consecretion of the new cemetery here took place on Thursday before last.

Carlisle.—The Dean and Chapter of Carlisle have recently held a meeting with the view to raise the necessary funds for effecting the restoration of their cathedral to a much greater extent than the result would be of the repairs of it now in progress. These latter repairs have reference chiefly to the fabric, and had long been urgently needed; but the Dean and Chapter contemplate the introduction of a number of decorations which they think necessary for the complete restoration of the building to its original state, in the execution of which, however, they are not at liberty to apply any of the funds raised on the cathedral estates for the substantial repairs, and they are consequently obliged to have recourse to voluntary contributions. The supplemental alterations they are desirous of making include the rebuilding of the ancient parish church of St. Mary as an integral portion of the restoration of their cathedral; the fitting up of the remains of the nave for cathedral purposes, as soon as the parishioners of St. Mary's are provided with a new church; the decoration of the oak roof, so as to restore it to somewhat of its original condition, when it was ornamented with the coats of arms of some of the principal Border families; the cleaning and repairing of the old stained glass in the tracery of the great east window; and a new organ, for which a fund has already been partially raised. The Dean and Chapter think the execution of the substantial repairs of the fabric out of the funds of the cathedral estates an opportunity which should not be lost for making the other changes to which reference has been made; and with that view they have made an appeal to the citizens of Carlisle and the inhabitants of the neighbouring districts, to which a hearty response is now being made.

Shrewsbury.—St. Michael's church, situated in the suburb of Castleforegate in this town, has been undergoing considerable enlargement during the last four months, and has now been re-opened. The alterations and additions have been executed by Mr. Dodson, from designs by Mr. S. P. Smith, architect. The four re-entering angles were taken down, and the walls extended, the space thus obtained at the north and south sides of the chancel and the west end being converted into pews. The original free sittings have been removed, and pews fixed there instead: to compensate for this, the gallery is widened and lengthened, and wholly appropriated to free sittings. The principal entrance is through the south face of the tower, and there is also an entrance at the south-west angle of the building. By these alterations upwards of 400 additional sittings have been obtained, one half of which are free. The cost will be about 700*l*.

Wellingborough.—A new church, or chapel of ease, is about to be erected at Wellingborough; the present edifice (though one of the largest in the county) being too small. The subscription toward its cost is progressing.

East Retford.—The parish church of St. Swithin, East Retford, was opened on the 11th instant. The work of restoration was entrusted to Mr. G. G. Place, of Nottingham, architect, and the contract for the works to Messrs. Lee and Webster, of Boston. The church was in a very dilapidated condition, externally and internally, and was sadly disfigured with galleries and enormous pews. The north aisle has been rebuilt and enlarged, and roofed with red deal. A similar roof has been placed on the south aisle. Benches of stained deal occupy the place of the pews, and the galleries have disappeared. The tracery in the windows has been removed. The floors have been laid with Yorkshire flagging, new gas-fittings (by Skidmore, of Coventry) adjusted, and a stone pulpit, and eagle lectern of oak provided. The external masonry has been thoroughly repaired, and the south transept gabled and battlemented. A new organ-chamber and vestry have been built on the south side of the chancel; the chancel itself extended 17 feet, and a clerestory added to it, so as to restore to its original proportions the eastern second pointed window, the centre compartment of which has been filled with stained glass, by Messrs. O'Connor, as a memorial of Mrs. Hawkesley Hall. The Foljambe window has been refixed in the south transept, and one compartment of the west window of the south aisle has been filled with glass, representing the Baptism of Jesus in the Jordan by St. John the Baptist: it is also from the pencil of Messrs. M. and A. O'Connor. The carving was executed by Mr. Lee. All the tablets and memorials in the interior of the church have been cleaned and restored, and several new mural monuments have been erected. The churchyard has been levelled. The entire cost of the restoration amounts to about 3,400*l*. all obtained by voluntary contributions, nearly 1,000*l*. of it through the exertions of the ladies of East Retford.

Glasgow.—The local *Gazette* adduces, as an instance of a rise in the value of church property, the recent sale of Renfield Church, with the ground attached to it. This property, situated at the corner of Renfield and Gordon streets, was acquired in the year 1822, at a feu duty, lately redeemed, for 1,000*l*.: the church building cost 2,300*l*.; making together 3,300*l*. as the cost of this property, which was sold by auction on Wednesday week at the rate of 15*l*. per square yard, yielding, say 16,111*l*. 13s. 4d. the highest price, it is said, at which church property has been sold in Scotland.

PARIS.

WE learn from *Galignani* and Paris papers that there are eight competitors for the prize of architecture at the Ecole des Beaux Arts. The subject is a Conservatoire de Musique for a great capital, entirely isolated, having a façade of 260 yards on a public square or place, and containing, besides a concert-room for 1,200 persons, a theatre of equal size, a library, and a museum of musical instruments.

The Academy have awarded the great prizes in sculpture. The first grand prize was given to M. Chapu, pupil of MM. Duret and Pradier. The work of this artist was injured by a fall, which broke it into several pieces at the moment it was being placed in its position. The fragments were afterwards arranged together, and its superiority was then so great as to merit the first prize. The second was awarded to M. A. D. Doublemard, pupil of M. Duret; and the third to M. Rolland, pupil of MM. Duret and Feuchère.

The International Statistical Congress has held its sittings in Paris successfully. The representatives of various countries attended. The wonderful facility with which these gentlemen expressed themselves in the French language surprised the Frenchmen. It was a matter of difficulty to discover a fault of language or in elegance of expression.

NAMES OF STREETS.

ALLOW me to say a word on the absurd manner in which the buildings in our streets are named and numbered, *e. g.* look at Hugamuffin-road, situate in the parish of ———; but why should I trouble myself to search musty rolls to discover the parish to which this celebrated road belongs? Look at it, Mr Editor. You walk, perhaps, on the right-hand side of the road, and see

Returning from my customary avocation in the City, a few days since, I was accosted by an individual, dressed in a fiery-coloured uniform, with the mystic characters—G.P.O. 4001, on his collar, who thus accosted me: "Can you direct me, sir, to Mumford-place?" I replied, "I have lived ten years down this road, and do not know it." "I only wish," replied this industrious individual, "I only wish, sir, that these here builders had to follow a postman's life for a few weeks: that would soon sicken them, I reckon, of this here way of calling the row of houses in a street by a score or two of names."

I really think, Mr. Editor, if the uxorious builders who thus immortalise their wives, and those gentlemen who are in a state of single blessedness, but are hoping for better days, only could experience a little of this difficulty, the system would pass away like the other remnants of the good old times, and remain in future ages only for the consideration of the antiquary.

J. C. S.

ISLINGTON.

CHURCH OF ST. PHILIP THE EVANGELIST.

A NEW church, to be named St. Philip's, has been commenced on an eligible plot of ground at the corner of Arlington-square, New North-road, having a frontage of 120 feet in the square, by a depth of 176 feet in Linton-street. This site was gratuitously reserved some years since by the foresight of the then Prebendary of Islington in St. Paul's Cathedral, the Clothworkers' Company, and the trustees of Lady Packington's charity, to whom jointly belonged "the Shepherd and Shepherdess fields," a tract now nearly covered with houses.

The church will be in the Anglo-Norman style, of the latter part of the twelfth century. It will consist of a nave, transepts, and aisles, and will accommodate 1,054 persons: the sittings are chiefly on the ground-floor. The total cost is to be 4,800*l*. The present design contemplates a church only, but there is ample space on the site for boys', girls', and infants' schools, towards Hale-street, and for a parsonage-house fronting the square. Mr. A. D. Gough is the architect; and Messrs. Dove, Brothers, of Islington, are the builders.

Funds are greatly needed for the prosecution of this work. With one exception, there is no district in the whole parish of Islington which contains so small a proportion of church sittings to the number of inhabitants, as St. Mary's district. Its church has a population of 17,500 still ecclesiastically attached to it, and the design of allotting 5,000 of that number to the new incumbency of St. Philip's deserves the earnest support of every churchman.

A writer in the *Islington Indicator* (a superior local print), shows that a great extent of the parish is as yet unprovided with accommodation for public worship. So far from there being provision for five-eights, or 62½ per cent. of the population (the proportion Dr. Chalmers estimates able to attend religious services), there is provision for only 29 per cent. The population is still rapidly increasing; and ere long, the 3,000 acres of the parish will form one dense mass of houses.

Building is still going on with rapidity in this part of Islington. Messrs. Rowland and Evans have raised a very large number of houses, including nearly a hundred on the site of the "Rosemary Branch" Tavern. Several large houses have been finished on Mr. Rydon's land, Highbury New Park; and Messrs.

Stroud have just commenced a long row in Mildmay-grove, facing the railway.

Buildings for the accommodation of the infant poor of Islington are now in course of erection on a plot of ground called Porter's Acre, situate on the east side of the Hornsey-road.

"Porter's Acre" was devised to the poor of the parish by John Parsons, by will dated 1700.

The main building contains, on the ground floor, accommodation for 180 children, namely, 90 boys, 60 girls, and 30 infants; a dining-hall for 200, to be used also as a chapel; a kitchen, washhouse, laundry, dairy, stores, and other necessary offices. Airing-grounds, with covered yards for unfavourable weather, are also provided. On the first floor are the dormitories, with proper conveniences attached.

The dwelling-house, in the centre, divides the girls' from the boys' department. In connection with the main building are baths, lavatories, workshops, &c. The building intended for the infirmary contains two fever and two convalescent wards, for twenty children, with nurses' rooms, bath-rooms, and other offices.

The buildings are faced with stock bricks, with red brick quoins, and have splayed reveals to the openings. The cost is estimated at about 10,000*l*. Mr. Frederick Tyerman is the architect, and Messrs. Patrick and Son are the builders.

THE BRITISH ASSOCIATION AT GLASGOW.

A VERY brilliant annual meeting of the *stars* and other *savans* of the British Association and their satellites has just been held at Glasgow. This was the second meeting of the Association in the western metropolis of Scotland, the former having been held in 1840. The arrangements for the present meeting were of the most complete kind. The university class-rooms were set apart for the sectional and committee meetings, the City Hall was engaged for the general meetings, the Trades' Hall was opened as a reception-room, and the Merchants' Hall was made available for the meetings of the general committee, who met on Wednesday in last week at one o'clock. Among those present on the platform and in the hall were Prince Lucien Bonaparte, the Earl of Harrowby, Count Frolich, from Sweden; Sir R. I. Murchison, Sir C. Lyell, Sir Charles Pasley, Sir John Rennie, Professor Fleming, Professor Balfour, Dr. Lyon Playfair, Dr. Whewell, Dr. Scoresby, Colonel Sabine, Sheriff Glassford Bell, Mr. Tite, Mr. Wentworth Dilke, &c.

The Earl of Harrowby was called to the chair, and Professor Phillips, assistant general secretary, read the minutes of the meeting of the general committee at Liverpool in 1854.

Colonel Sabine, as general secretary, read the report of the council to the meeting then held, and which, amongst other topics, congratulated the Association on the probable concentration of scientific bodies in Burlington House. A list of office-bearers was then read and other business transacted.

At five o'clock the Lord Provost of Glasgow gave a grand inaugural banquet in the M'Lellan Rooms. These halls, which were built for public purposes by the late Mr. Archibald M'Lellan, and in which is usually exhibited a collection of works of art of the different European schools, including numerous paintings by great masters (the greater part of the collection having belonged to the late Mr. M'Lellan himself), were on this occasion superbly fitted up. The saloons are three in number, one of which was prepared as a reception-room, the central one as a dining-hall, and the third as a coffee-room.

Amongst those present, besides names already given, were the Duke of Argyle, as president elect, the Earls of Elgin and Eglinton, Lords Ingestre, Belhaven, and Talbot, Baron Liebig, Sir D. Brewster, and many other eminent men.

The first general meeting of the association took place in the City Hall, at eight o'clock. The entire of this great hall was filled with a brilliant assemblage, including a nearly equal proportion of ladies, all in full evening costume. The Earl of Harrowby then introduced, as president elect, the Duke of Argyle, who, after ably reviewing the progress of science, said,—

The advancement of science depends, above all things, on securing for it a better and more acknowledged place in the education of the young. What we desire, and ought to aim at is, that abstract science, without special reference to its departmental application, should be more recognized as an essential element in every liberal education. We desire this on two grounds mainly,—first, that it will contribute more than anything else to the further advancement of science itself; and, secondly, because we believe that it would be an instrument of vital benefit in the culture and strengthening of the mental powers. And this brings me to say a word on the value of instruction in physical science, not merely with a view to its own advancement, but as in itself a means of mental training, and an instrument for the highest purposes of education. Even where the researches of physical science can do little more than guide conjecture, or illustrate merely what it cannot prove, how grand are the questions which it excites us to ask, and on which it enables us to gather some amount of evidence. It is sometimes proudly asked, who shall set bounds to science, or to the widening circle of her horizon? But why should we try to do so, when it is enough to observe that that horizon, however it may be enlarged, is a horizon still — a circle beyond which, however wide it be, there shine, like fixed stars without a parallax, eternal problems in which the march of science never shows any change of place. If there be one fact of which science reminds us more perpetually than another, it is that we have faculties impelling us to ask questions which we have no powers enabling us to answer. What better lesson of humility than this? What better indication of the reasonableness of looking to a state in which this discrepancy shall be done away; and when we shall "know even as we are known?"

SCHOOLS OF DESIGN IN CONNECTION WITH THE DEPARTMENT OF ART.

IN reply to several inquiries, let us state, that District Schools of Art, in connection with the Board of Trade Department, are now established at the following places. Entrance fee, 2s. Admission, 2s. and 3s. per month. The instruction comprises practical geometry and perspective, free-hand and mechanical drawing, and elementary colour:—

1. Spitalfields, Crispin-street.
2. Camden-town (late North London), High-street.
3. Finsbury, William-street, Wilmington-square.
4. Westminster Mechanics' Institute, Great Smith-street.
5. Saint Thomas, Charter-house, Goswell-street.
6. Rotherhithe, Grammar School, Deptford-road.
7. St. Martin's-in-the-Fields, Long-acre.
8. Saint Mary's, Princes-road, Lambeth.
9. Gore House, Kensington.

At schools 1, 2, and 9, there are female classes.

DRAINING RICHMOND PARK.

DEEP AND SHALLOW DRAINS.

THE Office of Works are draining that part of Richmond-park, near the Ranger's kitchen-garden, bordered by Sheen Common, which is now covered with rushes and weeds. The drains are all 4 feet and 5 feet deep, varying from 30 feet to 50 feet apart, in sand, and some clay. The work is being done under the directions of Mr. R. B. Grantham. Nearly all the park requires draining. Parts of it were drained some years since, but from the shallowness of the drains, and imperfect manner of laying the pipes or tiles, we are credibly informed, it requires to be drained again.

MASTERS AND MEN.

THE written certificate of character and ability suggested, by your correspondents of August 11th and 18th, to be given by employers to the employed in the building trades, I consider would be highly useful and encouraging. The present system, or rather no system, of setting on men just when they are wanted, without any recommendation (except, perhaps, that of some fellow-workman), and turning them off when they are done with, is most degrading: this is really using man just like a machine. Now masters should have more consideration for a man than a machine, and there should be more communication with the one than the other. It is important that our building magnates should be considerate towards those employed: both should be intimately and cordially united together: one cannot do without the other: each should remember they are eating of the same loaf. The relation between masters and men is close, but, ye masters, do ye feel and show the relationship by your friendly words and looks?—by your inquiries, or your call, or that of your wife or daughter, if any in your employ are ill at home?—or by your friendly reasonings in any case of unfaithfulness? If a kindly connection, a moral tie such as this does not exist, let it be cultivated and aimed at: it is duty, if not interest; and masters ought to consider it a part of their duty to make their men happy, remembering we are all the children in common of One whom we call "Our Father." W. A. H.

Workmen and Testimonials.—I have observed in your journal of the 11th of August, a letter from a Builder's Clerk, and on the 18th from a Builder, on the subject of workmen. Their opinion was that every workman should obtain from his employer when discharged a testimonial of good conduct, sobriety, &c. without which testimonial he should not be employed by any one. Now, Sir, having, I believe, given you their side of the question, allow me, in the name of the working classes, to state a few of the objections to their suggestion. If a workman should by any means (however innocently, or without intention), give offence to his employer, it would lie in that employer's power to ruin, if not utterly annihilate that man's character for life. Again, a workman, on leaving his employer, it might be to better himself, or that he had a chance of work nearer his home, would be entirely dependent on that employer's will for his future prospects (as far as his obtaining any more employment went), thus rendering the condition of the working man, already sufficiently overburdened, little better than, if so good, as that of a serf. It may be very well for clerks, and such classes of men, to require testimonials of character from one employer to another, because generally they have great responsibility and confidence placed in them, in consequence of having to handle a great deal of money, and perhaps to pay the workmen's wages, thus proving the necessity for a good character on their parts. But as workmen are very seldom required to take much responsibility, why should their very chance of gaining an honest living be vested in and subject to the whim and caprice of an employer?

A WORKING MAN.

COMPETITIONS.

Newark Cemetery. — The first premium has been awarded to Messrs. Bellamy and Hardy, of Lincoln, and the second to Mr. Pritchett, of Darlington.

Guildford Cemetery.—Twelve designs were received in competition, and from these the Burial Board have selected one marked "Hope," afterwards found to be by Mr. Roberts, of Southampton-street, Strand, to whom they awarded the *munificent* premium (10*l*.) offered. The design marked, "Do I deserve," was second favourite.

Aberystwyth Clock Tower.—Competitors still complain that they can neither get their drawings back, nor replies to letters. The committee appear to have behaved very ill in this affair.

SUGGESTIONS FOR LONDON.

I TAKE the liberty of offering to your notice a few suggestions.

I would propose first, a scheme which might be called "A Small Public Thoroughfare and Minor Improvement Scheme," for the purpose of relieving the principal streets of much of the traffic which is continually blocking them up, by simply converting many of the existing courts and alleys into small streets or thoroughfares. We want small outlets to take away the light traffic, such as cabs, carts, &c. For example, Ludgate-hill would be eased a good deal by throwing open the Broadway, Water-lane, Little Bridge-street, &c. Drury-lane and Covent-garden Theatres would also be materially benefited by converting what is now called Vinegar-yard and Marquis-court into a small street, which could be done by merely pulling down a few houses.

Again, there are many good streets existing which are quite disfigured, because a few houses are suffered to remain projecting a great way before the adjoining ones, such as St. John-street, Smithfield, Cursitor-street, Hanway-street, Rathbone-place, Sutton-street, Great Wild-street, and many others all over London.

While discussing the desirability of throwing back houses, I wish to ask whether the Act which compels all shops in the leading streets to be thrown back, does not apply equally to streets of every kind? There are many streets, particularly in the outskirts, built as private houses, with two or three feet of ground in front (in some cases called a garden), afterwards converted into shops, and the shops built right over the front bit of ground, instead of being carried back flush with the brickwork of the house, rendering such neighbourhoods very unsightly.

All these evils might be remedied by a general inspection of London, without any surveying, and if undertaken by the various Metropolitan Improvement Committees, such nuisances as Middle-row, Holborn, would no longer remain.

I think, likewise, the backs of houses ought to come under a general inspection, and persons should not be allowed to choke up every bit of ground they have with workshops, &c. In my opinion every house should have a space of ground equal to its own superficial area unbuilt upon, and every block of buildings should have a right of way or public footpath carried through the back.

Under the head of dirty property, I would advise a general clearance of all back slums, such as the purlieus of Gray's Inn-lane, &c. allowing but a bare compensation for the same, and the tenants of such nasty places should go to the outskirts of the town to find a lodging.

I will now propose a scheme (a novelty in its way) which, if carried out, would be a great boon to a large portion of the public who seem to be forgotten altogether, I mean the children, and that is nothing

more nor less than the establishment all over London of small public play-grounds. An excellent opportunity offers itself in the closing of all metropolitan graveyards, and some of these might be fitted up with every kind of gymnastics suitable for both boys and girls. I am sure it would be hailed with delight by a large portion of the inhabitants of London, if street music of every kind were restricted to these playgrounds. A. B. C.

AN AMERICAN BOOKSELLING ESTABLISHMENT.

THE buildings of the Harper Establishment are situated in New York, on Cliff-street and Franklin-square. The establishment covers about half an acre of ground, and consists chiefly of two blocks of buildings, one fronting on Cliff-street, and the other fronting on Franklin-square, with a court between. The two blocks of buildings are united, and made, as it were, one, by a series of iron bridges connecting the various stories of the two blocks with each other, and with a large circular tower in the court, which contains the only common stairway for the whole establishment. The edifice is constructed almost exclusively of stone, brick, and iron, and is hence fire-proof. That portion of the building which fronts on Franklin-square, is five stories in height, with a cellar and sub-cellar below, making seven floors in all. The front is built wholly of iron. It consists in each story of twenty-one Corinthian columns, with lofty windows filling the intercolumnations. Each range of columns supports the bases of the range above, and thus they rise, tier above tier, to the topmost story. Over the entrance-door is a full-length statue of Benjamin Franklin, in iron, and between the windows of the fifth story is a row of smaller statues of Washington, Franklin, and Jefferson. Above them is the cornice of the roof, supported by massive trusses. The depth of the foundation of the edifice may be inferred from the fact that the floor of the lowermost cellar is 22 feet below the sidewalk. A large portion of the space in these cellars is used for the storage of paper. This paper is taken across as wanted into the lower stories of the building on Cliff-street by a subterranean railway under the court. There are no staircases leading from one story to another in either of the buildings within the walls. Thus the several floors of the buildings are continuous and entire throughout. This construction is adopted as a safeguard against fire. The fireproof floors consist simply of a series of long, narrow, flat brick arches, supported by wrought-iron beams, the ends of the beams being supported in their turn by girders of wrought and cast iron, and these by a range of cast-iron columns, supported by a similar range in the story below. The number of cast-iron columns and girders in both parts of the edifice is over 250. The number of brick arches, averaging about 4 feet span, and 15 feet in length from girder to girder, with wrought-iron beams to support them, is about 2,000, and the whole area of floors thus supported in the different stories is between two and three acres. Mr. James Bogardus, engineer, was the constructor of the iron front of the building; Mr. John B. Corlies, the architect and builder; Mr. James L. Jackson, the designer and manufacturer of the iron columns and girders; and Mr. Abram S. Hewitt, of the firm of Cooper and Hewitt, manufacturers of the iron beams. We have gathered these particulars from one of a series of "Story Books," published, in this country, by Messrs. Low.

Miscellanea.

THE NEW-ROAD, ST. PANCRAS.—While you are on the subject of encroachment, perhaps you may deem it worth while to call attention to the encroachments that have been made, and are still being carried on, in one of the principal thoroughfares in the north of London. I mean the *New-road*, especially that portion by Tottenham-court-road and Pentonville. There is at the present moment a substantial brick building being run up at the corner of Chaltonstreet, and like all the other encroachments, it is carried out to the very pavement, not even the width of an ordinary area left between house and footway. The first of these encroachments were wood erections, built on wheels; but now they have got more audacious, seeing that the parties whose business it must be to see the Act properly carried into force, do not prevent any encroachments being made. I believe the Crown has something to do with this line of thoroughfare, and when it was originally laid out, the conditions were that a wide and clear thoroughfare should be left, and that no building of any kind whatever was to be *erected* on the gardens each side the road. This road is now becoming of more importance than ever, in consequence of its being the connecting line of the termini of the four greatest railways entering London.—A. M. G.

VILLAGE READING-ROOMS AND LIBRARIES.—A *conversazione* of the Bucks and Berks Lecturers' Association will take place at the Town-hall, Windsor, on Tuesday, the 25th inst. at seven o'clock. The Association has been formed for the purpose of establishing reading-rooms and libraries in the villages of these counties, and of assisting mechanics' institutes in the smaller towns. It is hoped there will be a large attendance of those interested in such purposes. Members of existing institutes are particularly invited to be present. Among those expected to favour the Association with their company are the Hon and Very Rev. the Dean of Windsor, the Hon. and Rev. S. Best, Mr. C. Knight, Mr. P. Le Neve Foster, &c. &c.

SMOKE CONSUMER.—At Mr. Hunter's saw-mills, Greendyke-street, Glasgow, may be seen a simple smoke consumer, described in the *North British Mail*. Connected with a valve and lever, a tin can dips into a small tub of water, and fills when the furnace-door is open; and, when the door is let down, the full can is lifted out of the water, and immediately commences to empty itself through the tap. As it empties, the sliding-valve gradually drops, until at last, when the can is about empty, the opening in the furnace door is entirely closed. Less than 2*l.* fits it up, and, although it is not said whether there is any economy of fuel or not, the absence of smoke is vouched for.

THE GREAT CLOCK AND BELLS FOR WESTMINSTER PALACE.—Copies of all papers and correspondence relating to this subject have just been published by order of Parliament. Amongst other matters there is a discussion between the Commissioners of Works and Mr Dent relative to the clock, which was not fixed and completed according to the contract, owing, as Mr. F. Dent affirms, to the tower and bells not being ready. As regards the bells and the construction of chimes, it appears that Mr. Wheatstone conferred with Sir Charles Barry, and proposed that they should be empowered to collect information in Paris respecting the most esteemed chimes in France and Belgium, and to ascertain whether there are in either of those countries makers acquainted with the traditions of the art, or who have applied the modern discoveries of science to the improvement of bells or to efficient substitutes for them. This suggestion was approved by the Board of Works. Mr. Wheatstone remarks that the miserable failure of the chimes constructed for the Royal Exchange, which have been twice recast without ultimate advantage, shows that no known bell-founder in England can be relied upon, as the best in repute have been tried, and have failed. What have our bell-founders to say to this?

METROPOLITAN WATERWORKS.—Parliament having some time since determined that no water used for the supply of London should be taken from the Thames within tidal influence, with other directions in relation to reservoirs and filtration generally, has occasioned the almost reconstruction of those works by which the metropolis is supplied. Among these, the Chelsea Waterworks Company are directing extensive alterations—the construction of filtering works, new pumping machinery, at Seething Wells, above Kingston-upon-Thames, and in the erection of an aqueduct between Fulham and Putney, by which means, in its onward course, the water of the Thames will be carried over the Thames itself. The Lambeth Water Company, who had anticipated the decision of Parliament, by obtaining an Act in 1848, deemed it desirable to construct their new works so that the water must of necessity undergo the process of filtration before it reaches the pump-wells of the steam-engines, the filters being a series of sunken reservoirs, compounded of numerous layers, through which the water from the river percolates, and, constantly descending, filters itself into the subterranean culverts, receiving wells, basins, and reservoirs. The works are arranged to be constructed in sections, so that a new section may at any time be added. The first section of the Lambeth Works now in operation is in duplicate, and comprises engine-houses and offices, in which are erected steam-engines equivalent to the power of 600 horses, and calculated to pump 10,000,000 gallons of water a day. The Chelsea Company are removing their entire pumping establishment from Thames-bank to the new site at Seething Wells. The site of their old works, from the erection of buildings between Millbank and the Ranelagh, has become valuable property.

THE GALLERY OF ILLUSTRATION.—A new picture from an original drawing by Mr. James Randell, representing the battle-field of the recent victory on the Tchernaya, has been added to the beautiful diorama of the events of the war, and serves, with the exception of the last great event, to make it a complete picture of the campaign, equally instructive and amusing. Messrs. Grieve and Telbin have spared neither pains nor cost to keep the promises they made when they opened their gallery, and should, if the public have any gratitude, be reaping a rich harvest as their reward.

THE CAMP AND BARRACK SANITARY CART.—It must be obvious, that the early and complete removal of all refuse matter from camp or barrack is the primary and fundamental means of securing the health of troops, and of arresting the ravages of disease, and without this all other precautions are vain and ineffectual. It is intended to effect this by means of the sanitary cart and portable latrines, as constructed by order of the Government for experimental trial at Aldershott, by Mr. James Bird, late surgeon to the Royal Glamorgan Militia. The cart and latrines are of wood and iron, each latrine being 5 feet long, 18 inches wide, and 2 feet 6 inches deep, and capable when full of holding about 115 gallons: there is a spindle at each end, fixed eccentric, and a moveable cover, to be used when the latrine is carted away for the purpose of being emptied. Previous to removal a yoke is attached to each spindle—the yoke having side-triggers, which preserve the latrine in an upright position, and admit of its contents being readily discharged. The cart is constructed on two wheels, having two arms projecting from the back, and resting upon the axle, with curved extremities adapted to the yoke. The shafts act as the long arm of a lever, the axle being the fulcrum. By this simple contrivance one latrine at a time can be removed with great facility, without risk of overflow, and its contents deposited without any manual labour being necessary either for filling or baling out. The cart and latrines, as constructed for Aldershott, were manufactured by Mr. Sam Nash, ironmonger, 253, Oxford-street, and may be seen on application.

THE CONDITION OF THE THAMES.—A memorial, signed by a large number of bankers, members of the Stock Exchange, public companies, and others representing important interests, has been presented to the Lord Mayor, approving of his design to call a public meeting, to consider the condition of the Thames, and advising the appointment of a committee to secure the execution of such steps as may be decided on.

ST MARTIN'S-IN-THE-FIELDS BURIAL GROUND.—Considerable excitement has been occasioned by the opening of a portion of the burial ground, Pratt-street, Camden-town, in course of building operations now going on, and the destruction by fire, as alleged, of human remains thus disturbed. The excavation, it is also said, closely adjoins a "cholera pit," in which many poor victims of cholera were buried. The vestry of St. Pancras have since had a meeting on the subject, and have appointed a committee to protect public decency.

THE IRON TRADE.—In consequence, it is said, of the great improvement which has taken place in the aspect of the iron trade, the ironmasters of South Wales have generally determined to advance the wages of their workmen 10 per cent. and, in several instances, this was carried into effect at the last pay-day. The iron trade now is in a more steady condition. The exports of iron are large, heavy shipments of rails and bars being sent abroad. The trade in the neighbourhood of Darlington and Middlesbrough, which is becoming more important every day, is in a flourishing state. A great portion of the material is converted into shell or shot. Government receive all that can be made, and other large works near Newcastle are almost entirely occupied with Government orders. In South Staffordshire the improvement continues, and according to the *Times'* correspondent, there is a determination to discountenance any gambling efforts to raise prices to an undue extent; yet according to others, "prices are certain to reach the highest figures, against which all prudent men have been protesting." It is precisely by means of such confident assurances, however, that the speculators work upon the minds of the more moderate and honest members of the trade. Bars are quoted up to 9*l.* and hot-blast pig to 4*l.* 15s.

MR. JOSEPH FRANKLIN, ARCHITECT.—Mr. Joseph Franklin, late architect and surveyor to the corporation of Liverpool, died last week, at his residence, Cooper's-hill, near Stroud. More than fifty years since Mr. Franklin came to Liverpool, from Bath, and was engaged in the office of Mr. Thomas Haigh, builder; and ultimately went into partnership with him and his son, the present Mr. Thomas Haigh. In 1837, Mr. Franklin, having acquired an ample independence, retired from the concern, and accepted the situation of architect and surveyor to the corporation. This appointment he resigned about eight years ago. Mr. Franklin designed several buildings in Liverpool; amongst others, Dr. Raffles' Chapel, the Crescent Chapel, and Pembroke-place Chapel.

THE PEEL STATUE AT BIRMINGHAM.—The Peel statue, inaugurated a few days ago, remains unpaid for; indeed, not half the required sum has yet been subscribed. When the commission was intrusted to Mr. Hollins, it was stipulated, we believe, that he should receive 2,000 guineas, but the efforts of the committee have failed to obtain a larger subscription than 900*l.* and the sculptor is thus more than 1,000*l.* out of pocket.—*Aris's Birmingham Gazette.*

VENTILATION BY FANS.—A patent has been recently granted to Lieut. Cook, R.N. F.R.S. Professor of Fortifications, at Addiscombe, "for improvements in the mode of working gigantic fans, called punkas, for agitating the air in hospitals, barracks, churches, and other large buildings in tropical climates, and in the height of summer in more northern latitudes." These punkas may be worked by manual labour, or by horse, bullock or steam power. The machine is so arranged, that one man can work sixteen punkas with comparative ease. This is the number usually required for fanning the occupants of thirty-two beds, arranged in pairs, in an Indian hospital. The action of any single punka may be arrested without affecting the onward motion of the others, and set to work again at the will of the patient. For private beds, "revolving fans" are used, *within* mosquito curtains: these fans, by a simple and noiseless mechanism, are made to fan the occupant for two, four, six, or eight hours, according to the temperature of the room, and the consequent speed required. The apparatus is said to be very portable.

STRIKE OF THE LABOURERS AT THE CRYSTAL PALACE TUNNEL.—Last week the bricklayers' labourers in the employment of Messrs. Hanley and Eales struck for wages. It is stated that Messrs. Hanley and Eales are sub-contractors under Messrs. Peto, Brassey, and Betts, for the construction of a tunnel, 800 yards in length under the south-western end of the Crystal Palace, and the rising ground on each side, and which is to form a portion of the "Crystal Palace and West-end Railway." The works had been going on in a satisfactory manner, when the bricklayers' labourers began to exhibit symptoms of dissatisfaction at their wages, and insisted upon being paid an additional 6d. a day. On Thursday in last week they refused to go to work. Their employers, finding that their contract would not enable them to comply with the demands of the men (and considering that they were paying them 30s. a week for five hours' work a day), have refused to make any advance.

BUILDERS' BENEVOLENT INSTITUTION.—At a recent meeting of the directors of this Institution, the balance at the bankers' was found to be 379*l.* 8s. 9d. and it was moved that 300*l.* stock be purchased for the building fund, which was carried. Mr. George Bird, in moving that another election of pensioners take place in November next, said that he trusted that the builders generally would support their new president, Mr Charles Lucas, at the annual dinner which was fixed to take place on the 30th October next, and by that means enable the directors to take in the whole of the candidates. He hoped that all who could would become stewards, for if they did that, and each one tried his best endeavours, he felt confident that they would raise money enough to relieve some of the poignant distress that was now existing. Mr. C. Eales seconded the motion, which was put and carried; and after a vote of thanks had been passed to the chairman, the meeting separated.

THE COPPER TRADE.—There has of late been a good deal of uncertainty in the state of this trade, which is ruled by a *clique* somewhat like that under which the iron trade has so long existed in a perpetual state of fluctuation. At the last monthly meeting of the smelters' combination, it was resolved not to alter the nominal value of copper, as this would only be the means of enhancing the present high price of ores, and leave no advantage to the smelters, their object evidently being to rule the trade themselves, if possible. Wire, tubing, rolled metal, &c. are selling at rates which are declared barely to cover general charges on every fall below that level. The following are the quotations of a manufacturer's agent:—Nominal price, tough ingots, 126, 2½ per cent. off, but selling in many cases 20s. below.——The *Eclectic Review*, we may here note, has recently published some interesting historical, mineralogical, and statistical remarks on copper and lead, as well as on tin.

REFORMATORY SCHOOL FOR WILTS.—A highly influential meeting was held in the Town-hall, Devizes, on Monday week, under the presidency of the Marquis of Lansdowne, with the view of adopting measures for the establishment of a Reformatory School for Wiltshire. In course of the proceedings some interesting particulars were given as to the establishments at Hardwick, near Gloucester, and at Kingswood. The boys were said to be eager for farm work, and the farmers of the adjoining districts employed them, and found them useful. The cost of erecting the buildings at Hardwick, for thirty-nine boys, was 500*l.* The total expenditure of the first quarter of 1855, was 212; the receipts, 313*l.* The experiment about to be tried at Devizes is for the reformation of forty boys. The buildings, probably, will consist simply of two or three cottages. A very influential committee has been appointed to select a proper site and take the preliminary steps for the establishment of this institution, and a subscription has been entered into for the purpose.

A JUVENILE STRIKE.—This is a sharpset and precocious age. Cockney children were once regarded as an inimitable class of men in miniature, but now their like may be found even in far-off nooks and corners throughout the country. At Dumbarton, about 120 boys are employed in heating rivets and other light work at the ship-building yards, and have hitherto been paid wages of 4s. and 4s. 6d. a week. These boys lately struck work for an advance of 6d. a week, and the masters, after some resistance, have been obliged to accede to their demand.

A CURE FOR HOLBORN-HILL.—As a born Londoner, I have felt annoyed when reading the accounts of the splendid reception given to our Queen in Paris, at thinking of the unfavourable contrast afforded by her own dingy London, that must have been present to her Majesty's mind. I saw Napoleon and his Empress enter London proper by the narrow gorge of Temple-bar,—a scaffolding up at the corner of Chancery-lane, and hoardings nearly opposite,—and I felt considerably ashamed of the impression that must have been created on entering the wealthiest city in the world. It cannot be denied that the hand of enlightened despotism has done more to improve and beautify Paris than constitutional government has done for London; and though I suppose none of my fellow-citizens would therefore desire to change our free institutions for the mockery of them which is permitted to our gallant allies, it is provoking to think how little of public spirit exists among our people, and how perpetually the breeches-pocket interest defeats public improvements. I wish just now to call your attention to an opportunity which appears to me to offer for effecting a much talked-of improvement on very economical terms. The project for a viaduct across the valley of the Fleet—uniting the opposite acclivities of Holborn-hill and Skinner-street, and obviating the present enormous and painful expenditure of animal labour in dragging up loaded waggons and other vehicles - has from time to time been agitated; and I believe, in consequence of the anticipated injury to house and shop property on the existing line, has been as often allowed to die away. Now, sir, if you or any of your readers will turn down Charles-street, Hatton-garden, and from the high ground, say at the end of Kirby-street, look over to Sharp's-alley and the neighbourhood of Cow-cross, I think you will agree with me, that an excellent opportunity offers here for throwing across the wished-for viaduct, of iron, stone, or brick, the ground being either quite clear, or occupied with the last remains of Saffron-hill and similar localities. The Victoria-street which runs along the valley might be spanned by a girder bridge similar to those on some of our railways, and the approaches be constructed of brick, and the whole made to assume a handsome appearance.—L.

OVENS.—As you are a reformer in all matters appertaining to building, may I ask of you to reform our domestic ovens. I am a poor clerk of 100*l.* a year, living in a secluded village, and, with a large family in prospect, I am anxious to economise, and think I can do so by having an oven built in my own house, so that I could make and bake my own bread, &c. but the present plan (viz. by heating them with a large quantity of wood burnt in them, or by a furnace burning coals, the flame simply crossing the oven and out at the opposite side) seems absurd, and extravagant in fuel, to say nothing of the dirty state it is in after heating, from cinders, or ashes and soot, and withal it has a very uncertain and irregular heat. I am not at all skilled in the art of building, but think one might be built upon a much better principle, say with a furnace, to burn either wood or coals, the fire to pass under the bottom, then over the top, and finally along the back into a chimney: such a one (if it can be built) I think might be heated at a *very* little expense: a regular heat might be obtained, and the interior would be *perfectly clean*. If you, sir, can assist me in this matter you will much oblige, and also have the blessing of my and no doubt many other good housewives.—E.

THE TYNE PIERS.—The River Tyne Improvement Commissioners have let the contracts for these important marine works to Mr. Lawton, of Newcastle-on-Tyne. The amount of works on the north pier contracted for is 1,400 feet; on the south pier, 2,800 feet. The total cost of both piers will be about 166,000*l.* They have to be completed in five years, and will afford important protection to the immense number of vessels that yearly enter the Tyne from all parts of the world.

"THE LUNGS OF LONDON."—A correspondent in "Notes and Queries" says the parks have long been called by this name, which seems to have originated with Mr. Windham. In a debate in the House of Commons on June 30, 1808, respecting certain encroachments upon Hyde-park, Mr. Windham said, that Hyde-park was "the lungs of London." Free and fresh air was like champagne to the vulgar, as they seldom tasted it. (*Examiner*, 1808, p. 426.)—F.

PROPOSED NEW LONDON CHURCHES.—Several new churches are about being commenced in the metropolitan districts, while others are so far advanced as to be nearly ready for consecration. In Paddington three new churches are to be at once commenced. In Coventry-street, Haymarket, between Rupert-street and Princess-street, a church is to be erected, her Majesty having liberally contributed towards it. Three additional churches are to be erected in Clerkenwell, an influential committee, of which the Earl of Shaftesbury is the head, having undertaken to raise the necessary funds. In the parish of St. Andrew, Holborn, a large church is to be built, at the expense of Mr. J. G. Hubbard, the late governor of the Bank, a site having been granted by Lord Leigh. At Limehouse, a new church is to be built, at the sole expense of Mr. William Cotton. Two new churches in Lambeth and one in Southwark (Westminster-road), will be commenced early next spring. "A merchant," whose name has not transpired, has volunteered to build and endow a church in any part of London the bishop may point out.

CAST STEEL BELLS.—The *Sheffield Independent* says that the firm of Naylor, Vickers, and Co. Millsands, have introduced into Sheffield a new trade, in the making of cast steel bells. These bells are extensively used in Germany, and steel has these advantages over bell-metal, that the bells may be made 30 per cent. lighter, are only about half the price, and are very much stronger. There was much hesitation last week about ringing the bells of the old church at Manchester, for fear of danger to the tower. If the bells there could be replaced by others of only two-thirds their weight, it would probably obviate the difficulty. It is yet to be ascertained, however, whether steel bells can be combined in a regular chime of eight. On Monday before last the casting of a steel bell weighing 25 cwt took place at Millsands. It required fifty-six pots of steel, and the whole were poured with rapidity and order in five or six minutes. The casting is said to have been successful, producing a sound bell of great size and power, and of good tone.

TENDERS

For the Bedminster Drainage, as advertised for in our paper:—

Hobbs, Clifton	£10,825	0	0
Baker, Bristol	10,650	0	0
Savage, Northampton	10,332	11	0
Brown, Southampton	9,500	0	0
Lee and Lavars, London	8,882	0	0
Merryweather, Bristol	7,742	10	0
Millet, Bristol	7,078	3	6
Fanner, Bristol (accepted)	7,029	15	5

For erecting the boundary walls and enclosure with iron railing and gates, building an Episcopal and a Dissenters' chapel, and sexton's house, for the new cemetery, St. Nicholas, Rochester, Kent:—

Spicer, Stroud	£1,947	10	0
Cotton, Rochester	1,887	17	6
Naylar, Rochester (accepted)	1,826	0	0

For the school and institution at Wantage. Mr. William White, architect:—

Mr. Hunt —Received after the time appointed.			
Mr. Delay —Residence	£949		
,, Long range	950		
,, Oratory	250		
,, Outhouse	350		
			£2,499
Mr. Dyne —Residence	£983		
,, Long range	972		
,, Oratory	315		
,, Outhouse	202		
			£2,472

(With 100*l.* added should the works not be commenced all together).

Mr. Dale —Residence	£767		
,, Long range	837		
,, Oratory	275		
,, Outhouse	187		
			£2,066

(With 12½ per cent. added should the works not be commenced all together),

Mr. Walter—Residence	£1,220		
,, Long range, Oratory, Outhouse	*765		
			£1,985

* Not separated.

Mr. Dale's tender (commencing with the residence only forthwith) accepted.

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

ADVERTISEMENTS.

TO JOINERS.

FEW good JOINERS can have EMPLOY-MENT by applying to Messrs FOORD and SONS, Acorn Brewery, Kent

BOOKKEEPER and DRAUGHTSMAN.—An efficient PERSON WANTED to Establish a new Business; by letter, with references, to E. S. C. Mr. Hamblin's, 421, Oxford-street.

CLERK of WORKS WANTED.—Must be a thoroughly practical man, and accustomed to the superintendence of Sewerage and Drainage Works, and capable of setting out Work and measuring. Applications, stating experience, references, and salary required, to be sent in on or before the 29th inst addressed to the Secretary, R. A. MARCH, 48, Bedford-row.

PLANING and PLANING MILLS.—WANTED, a steady MAN, thoroughly competent to work a Planing Machine (rotary), also to manage a Saw-frame and Circular Saw Bench. Must produce satisfactory references as to character and ability, and be used to the management of steam engines. Apply, stating terms, to F. J. UTTING, Wisbech.

GILDERS.—CONSTANT EMPLOYMENT.—WANTED, a steady MAN, thoroughly competent to work a Gilding Machine (rotary), also to manage a Saw-frame and Circular Saw Bench. Must produce satisfactory references as to character and ability, and be used to the management of steam engines. Apply, stating terms, to F. J. UTTING, Wisbech.

GILDERS.—CONSTANT EMPLOYMENT.—WANTED, a steady MAN, thoroughly competent to work a Gilding Machine (rotary), also to manage a Saw-frame and Circular Saw Bench. Must produce satisfactory references as to character and ability, and be used to the management of steam engines. Apply, stating terms, to F. J. UTTING, Wisbech.

ARCHITECTS and SURVEYORS.—CITY of LONDON and 3 COUNTIES FREEHOLD LAND SOCIETY.—The Committee are desirous of appointing a gentleman with the above qualifications to the Society's Estates in Essex, Herts, and Middlesex. Applications to be addressed to the Secretary, at the Society's Offices, 29, Cornhill, where every information may be obtained. The appointment will be required to commence on the 1st proximo. Applications to be sent in on or before the 29th inst addressed to the Secretary, R. A. MARCH, 48, Bedford-row.

TOWN of LEEK.—To SURVEYORS.—Notice is hereby given, that a SURVEYOR is WANTED for the Town of Leek. Candidates for the appointment must be Land Surveyors of good education and competency, and must attend at the Commissioners' Office, Leek, before SATURDAY, the 6th of OCTOBER next. Candidates must be familiar with the practice necessary in connection with works of water supply, drainage, sewerage, and street cleansing, and competent to set out levels, to plan, superintend, and measure works of any description, and also to superintend the execution thereof. Candidates must attend personally (unless specially summoned), and state the salary required.

TO STONE-MASONS.

WANTED, SIX good PORTLAND STONEMASONS; also ONE used to SETTING. Apply to Messrs. FOORD and SONS, Acorn Wharf, Rochester, Kent.

TO JOINERS.

WANTED, FOUR GOOD FIXERS.—Liberal wages will be given.—None but good and steady men need apply to Mr GOSWELL, Builder, Saffron Walden

TO BUILDERS' YARD FOREMEN.

WANTED, by a London firm, an active, steady person in the above capacity, and capable to attend to the Carpenters' work. Address, stating age, where last engaged, and what wages required, to W. H. Office of Builder.

TO IRONMONGERS' ASSISTANTS.

WANTED, in an old-established Black Ironmongery Business, one who is fully qualified to take MANAGEMENT of the SHOP. Apply, stating age and salary, to E. L. W. Office of "The Builder."

TO CARPENTERS.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

This Paint possesses in an eminent degree the following advantages over all other known Pigments:—
INDESTRUCTIBILITY BY HEAT—PRESERVATION OF IRON FROM OXIDATION, WOOD FROM DECAY, AND MASONRY AND BRICKWORK FROM DAMPNESS—PERMANE
OF COLOUR AND FREEDOM FROM DELETERIOUS PROPERTIES—SUPERIORITY OF BODY.

The Protoxide Paint, as at present produced, is of one shade of colour, viz.:—A pale drab, but may be tinted with any other colour to suit the taste and purpose for which it may be required. It not affected by sulphuretted or carburetted hydrogen gas, bilge water, or indeed foul air of any kind, and is therefore well adapted for the interior of Ships, Warehouses, Offices, Stabling, &c.; and its total freedom from deleterious properties, it will be found of great value for painting the interior of Hospitals, Asylums, Unions, Gaols, and other Buildings which may require to be painted du occupation.—Sole authorized Agents for England:—

MESSRS. C. GRABHAM AND CO. 4, BARGE-YARD, BUCKLERSBURY, LONDON.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.

Prepared only by W. J. STENT, Warminster.

London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those careful matrons, perayers and painters' color, will be entirely avoided. The Powered White Zinc may be had for grinding in Oil; also for Fluter Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint dealers in Original Packages, each cask stamped—HUBBUCK—LONDON—PATENT. And if not so marked the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable. Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attenth a of Contractors, Merchants, and others, to the quality of their Roman Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parret.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has entirely CLOSED his Establishment on the Surrey side of the Thames, and that Articles of his manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Fraed-street, Paddington.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the great satisfaction in introducing the Trade and the above superior CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with sand, its cementing properties stamp it at once as the best cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and can truly to the statements put forth by those who have not the knowledge to make it. Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not recede in damp situations. An account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman Parian [under patent, and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, and tile Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent. N.B. These Cements supplied for shipment, on advantageous terms.

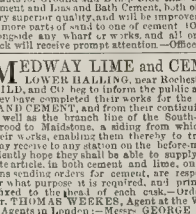
NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishments, &c.—will not twist, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7 0 0
Fine	3 0 0
Coarse	2 10 0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour, resembling the Bath stone.—CHARLES RICHARDSON, 6 South Wharf, Paddington.

11, George-yard, Lombard-street, City



ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above

TO BUILDERS, CONTRACTORS, SHIPPERS, and Others.

G. BURGE, Jun. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland-yard, Westminster.

DAVIES and NORMAN, Agents.

Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.

IN EVERY VARIETY

SOUTHAM BLUE LIAS LIME and PORTLAND CEMENT WORKS, OLDHAM and TATHAM are now prepared to receive orders from contractors, builders, and merchants for Ground and Lump Blue Lias Lime, also for Portland Cement and Lias and Bath Cements, both of which will be found of very superior quality, and will be improved by the addition of two or more parts of sand to one of cement. O. and T.'s boats can run alongside any wharf or works, and all orders addressed to Warwick will receive prompt attention.—Office, Warwick.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester. T. H. BOORMAN, WILD, and CO. beg to inform the public and trade generally, that they have completed their works for the manufacture of PORTLAND CEMENT, and from their contiguity to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, a siding from which will be carried into their works, enabling them thereby to transmit any orders they may receive to any station on the before-mentioned line, and confidently hope they shall be able to supply the public with a first-rate article, in both cement and lime, on moderate terms. Persons sending orders for cement, are respectfully requested to say for what purpose it is required, and printed instructions will be affixed to the head of each cask.—Orders to be addressed to Mr. THOMAS WEEKES, Agent at the Works.

Agents in London:—Messrs. GEORGE POTTER and CO. Lime Merchants, Purfleet Wharf, Blackfriars; and 19, North Wharf-road, Paddington.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or barge direct from the kilns.

Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfactica constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, FAVIORS, STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 2d, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

AUSTIN'S ARTIFICIAL STONE.—This material (originally composed of with Portland Cement) has now been in extensive use among the highest class of London edifices for above twenty-five years. During that time a collection of ornamental Work, such as Vases, Figures, and Fountains, has been constructing, of which the public have recently had a full sight to say, that a single room of each work would exactly amount to between 4,000l and 5,000l. In contradistinction from Terra-cotta, and all other kind of Portland Cement, it is moulded in form by the process of taking, and, instead of the plain surface of Terra-cotta, it has the closest resemblance to Portland Stone, having also the advantage of being sawn out.—AUSTIN and SEELEY, Nos 1 to 4 Bedford-row, Newman-street, Regent's-park.

*** A large Stock of Ornamental Chimney-tops.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Forecourts, Walks, Malt houses, Cart-Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and if cheaper guaranteed

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA-COTTA, awarded to HILAND HARD, late of Lambeth Original Works, and successfully by them in the manufacture of this valuable material, that has been so especially adapted for nearly a century in this country, by our eminent architects and others, to the adornment of our best buildings. Groups, statues, Vases, Fountains, and Architectural Embellishments, at prices and quality that will defy competition, and will be found to be a different material to that now being imitated by puffing Advertisers, with only three or four years' experience, and without practical knowledge. Some of the works recently completed by M. H. B. can be referred to the whole of the embellishments to the external part of Clifden House, his country house of Sutherlands; also Tort Church, and Ashland Churches, the turrets to the Garden rent Chapel, containing from 100 to 150 feet tube, the colossal Britannia, 12 feet high, at the Copper Office, Arsenal, Cornhill and London-street, the Arms, with the allegorical group, at the Kent Mutual Insurance, Queen-street, and other works elsewhere, too numerous to mention. A large Stock of newly designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

TERRA-COTTA.—Statues, Statuettes, Vases, Tazze, Busts, Consoles, Bas-reliefs, &c. by J. M. BLASHFIELD, of Millwall, near the West India Docks Station, and sold at No. 1, Pmed-street, Paddington-basin, where prices and designs can be obtained. Examples of Terra-cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Nave of the Great The statues of Australia, Vasus de Medici, and the colossal Britons on the gateway in Sydenham, are in Terra-cotta, as are the fountains at the Renaissance Court, and the roof of the Alhambra Court. The Pompeian roof of Terra-cotta and the cement casting, &c. since the occupying of the Crystal Palace, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is acquired for permanency, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from poisonous properties, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material from which it was made, to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it is then produced a very inferior tasteof very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark in full by Messrs. DELN-DELL, SPENCER, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents. In London, Messrs. CHARLES TURNER and CO. Wholesale Agents, 69, King William-street, City; FREDERICK BRABY, Wholesale and Retail Agent, 8, Tottenham-court, New road. In Manchester and Liverpool, by R. CLAY. Messrs. Morse and Son, the town wledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Dundee; Bristol and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 13, Manchester-buildings, Westminster.

SAFE and PROFITABLE SPECULATION. TO BE DISPOSED OF immediately, a very valuable BUILDING AGREEMENT direct from the landlord, partly executed some of the houses are completed and occupied including some houses now in progress, together with the scaffolding, stock, stone, &c. The proprietor being engaged in another business at a distance requiring all his time, will deal liberally, regardless of the value, with a prompt purchaser.—Apply to Mr. GLASIER, Auctioneer, 11, Charing cross.

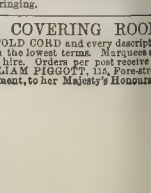
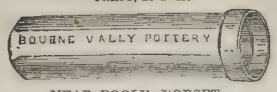
IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.



J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.



Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees for temporary Awnings on sale or hire. Orders per post receive most prompt attention.—WILLIAM PIGGOTT, 113, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

ALT-GLAZED STONEWARE PIPES, BENDS, JUNCTIONS, CLOSET-PANS, TRAPS, &c at the

NEAR POOLE, DORSET.

hese Pipes being made under immense pressure by patented machinery, and burnt by intense heat to an unusual degree rdness, are very far superior to the best ware hitherto manufactured in Hants and Dorset; they are made of clay of the quality, the produce of the estate, and will bear comparison with any Pipes in the kingdom, and can be had upon appli- n to

Lowe's Patent Stench Trap, Beggs's Improved.
And all other Articles required for Water-Works Purposes, &c.

LONDON HOUSE,

Mr. THOMAS BEGGS, 37, Southampton-street, Strand, General Depôt for Sanitary Articles, including Wash and Plug Basins, Hoppers, Urinals, &c. The attention of Architects and Builders is particularly requested to the various appliances for supplying common Closets and Urinals, manufactured by Guest and Chrimes, and to Thomas's Improved Urinals for angles and flat walls, as fitted at the King's College Hospital, and other Public Institutions.

Plumbers' Brass Work of every description.

BATEMAN AND MOORE'S PATENT HYDRANT.

UNDERHAY'S PATENT REGULATOR CLOSETS, for constant or intermittent supply, dispense with Cisterns, Service Boxes, Valves, Levers, Cranks, Wires, &c. &c.; much time is saved in fixing, and a better flush of water obtained in use.

Pan, Valve, Self-acting, and Servants' Closets on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed; 5,000 of them have been sold, and no instance of failure has occurred.

These Stool-valves are cheaper, stronger, and more economical, than any other. Many thousands are in use, and greatly approved of.

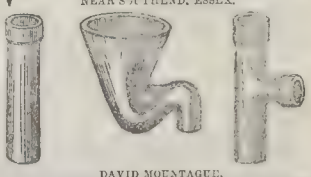
Manufactured by
CHARLES BUTTERY and SON,
Brass Founders, Croxall-road passage, Clerkenwell, London.

SUPERIOR GLAZED STONEWARE DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNDER-POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in its manufacture, which is equal to glass, and rendering stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:



Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Hassock Wharf, No. 8, Upper Thames-street.—Millwood and Co's Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britten-street, Chelsea; and at the Pottery.

E. and W. STURGE invite special attention to their reduced LIST of PRICES of Drain Pipes, Junctions, Pots, Traps, &c., also to the Patent Bends, &c.; Slabs of the best quality, which they can supply and recommend to County builders and others supplied with an information, on application, to E. and W. STURGE, Bridge-wharf, City-road.

N.B.—The wharf is well situated for carriage by canal boats, or to the railway, to which but a small charge for cartage is made.

January, 1855.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

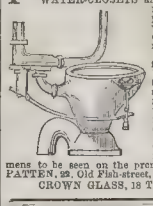
DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet pans, Jars, Bottles, and every article in Stone Ware on reasonable terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Birkwell. Orders executed from the above places, from Falcon-wharf, 89, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS. This ware, allowed by all to be of the best manufacture, by the unparalleled quality, combined with cheapness, will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and CO Great Northern-wharf, York-road, Kings-cross.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE

No. 7.



Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 300 feet: they are found to be extremely durable, and are cheaper than common cocks. Manufactured solely by the Patentees,

THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.

N.B. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price, complete, 12s. 6d. each.

PATTEN'S PATENT HIGH-PRESSURE WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with cistern, cranks, wire, lead trap, &c. Any number of Closets can be supplied from one main.

Also PATTEN'S improved powerful PATENT LOW-PRESSURE WATER-CLOSETS, patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals.—Drawings, testimonials, and references of the highest respectability forwarded by post. PRICE for Closet and Apparatus COMPLETE FROM 25s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 29, Old Fish-street, near St. Paul's, London.

CROWN GLASS, 18 TABLES, 22s. PER CRATE.

DRAINAGE of LAND.—WANTED, to undertake the DRAINAGE of LAND by CONTRACT, or to erect temporary Tileries, in order to supply Drain-pipes at a reasonable price.—J. JOHNSON, Drainage Engineer and Contractor, Abingdon-street, Westminster.

SALES BY AUCTION.

TWICKENHAM To Builders and Persons wishing to build for their own occupation or as an investment.—Valuable Land, with extensive frontage and two ground Rents, amounting to £11 per annum.—Mr. MASON, at GARRAWAYS, on TUESDAY, SEPTEMBER 25th.

FIFTY PLOTS of FREEHOLD BUILDING GROUND, chiefly fronting the new church, Twickenham, a short distance from Pope's Villa; four and a half miles opposite Wellington House, and adjoining Sir Wm. Cook's Park, two genteel detached residences between the old and lower roads, gravelly soil and good water; eligible for villa residences, with a railroad station half a mile distant. Also a well-secured rent of £5, assessed taxes excepted, issuing out of a house, already built on part of the estate, annual value, 70l.; and another ground rent of 52l. from a piece of building land adjoining, let to Mr. Legg, who is erecting eight villas, which rents are to be secured on application to Mr. PEARS, at 6, Prince Albert. Particulars had of the Auctioneer, Norton Folgate.

MITCHAM Freehold Land, with three frontages, and old Houses, offering a desirable opportunity for building speculation.—Mr. MASON, at GARRAWAYS, on TUESDAY, SEPTEMBER 25th, at half-past 2.

TWO ACRES of BUILDING-GROUND, facing Mitcham Church; frontage 210 feet, depth 84 feet; the whole of the ground is level, rich, and well adapted for villas and in rear, on the fourth leading into the Morden road estate, with five roomy Houses, large barn, &c. Particulars of Mr. WEST, House Agent, Mitcham; of Messrs. Nicholay and Co., No. 1, Ingram-court, Broad-street, and of CHARLES BIRD, Esq. Solicitor, 6, Fleet-street

HALL will SELL by PUBLIC AUCTION, at GARRAWAYS, on TUESDAY, the 25th inst., at TWELVE for ONE precisely, a most eligible BUILDING ESTATE, called the Fulham Land, containing TEN HOUSES, one [illegible] shop, and [illegible] Cottages, [illegible] Gardens, [illegible] Pieces of Building Ground, [illegible] Stables, [illegible] Coach-houses, [illegible] Sheds, [illegible] Yards, [illegible] Pigsties, [illegible] Offices, [illegible] Walls, [illegible] Fences, [illegible] Gates, [illegible] Posts, [illegible] Rails, [illegible] Pales, [illegible] Hurdles, [illegible] Trees, [illegible] Shrubs, [illegible] Plants, [illegible] Turf, [illegible] Soil, [illegible] Manure, [illegible] Gravel, [illegible] Sand, [illegible] Lime, [illegible] Timber, [illegible] Deals, [illegible] Battens, [illegible] Boards, [illegible] Planks, [illegible] Scantling, [illegible] Quarters, [illegible] Sashes, [illegible] Doors, [illegible] Frames, [illegible] Cupboards, [illegible] Mantels, [illegible] Stoves, [illegible] Ranges, [illegible] Pipes, [illegible] Cisterns, [illegible] Lead, [illegible] Iron, [illegible] Rails, [illegible] Gates, [illegible] Posts, [illegible] Palisades, [illegible] Hurdles, [illegible] Fencing, [illegible] Gravel, [illegible] Sand, [illegible] Lime, [illegible] Timber, [illegible] Carts, four wheel spring van, capital market-cart, water-cart, [illegible] Harness, [illegible] Ladders, [illegible] Scaffold Poles, [illegible] Tools, [illegible] Utensils, and various effects.—May be viewed on the Premises, and catalogues had on the Auctioneer, 11, Charing-cross.

SALES BY AUCTION.

DESIRABLE INVESTMENT.

MR. PENNINGTON has been instructed by the Directors of the Cork, Blackrock, and Passage Railway Company to SELL by AUCTION at his SALES-ROOM (Lancaster-court, Cork, in WEDNESDAY, the 3rd day of OCTOBER, 1855, at the hour of ONE o'clock, in the valuable LEASEHOLD PREMISES, known as the VICTORIA BATHS and HOTEL, the handsome marine residence of the late Henry Pitcher, Esq. and the PLOT of BUILDING GROUND ADJOINING, containing a frontage of about 400 feet, all held under lease for a term of ninety years and six months, from the 29th August last, at the yearly rent of £62. This extensive property, on which a sum of over £5,000 has been expended, is built in a few minutes' walk of the city, at Passage Passage, and ab ut three miles distant from the fashionable watering-place of Monkstown from which steam-boats ply every half hour to and from Queen's-quay. It is beautifully situated on the River Lee, and possesses the important advantage of a quay, and the strand to low water mark in front. The baths have been fitted up in the most elegant and complete manner, and include all the requisites which are to be found in the best establishments of the kind. The premises are built with hewn limestone, and are two stories high, with dressed limestone quoins, &c. The house contains twelve bed-rooms, three drawing-rooms, and other rooms, with servants' apartments, &c. The concerns are at present let to Mr. Archibald M'Donnell, at a rent of £61 per annum, which is considerably under their value; but a new rent is to be determined on the 1st day of May next, when the house and premises in occupation of Mr. O'Connell are to be held by him, part under a lease for eighty-six years from the 1st day of May, 1843, at the yearly rent of £42; and part under a lease for twenty-one years from the latter premises, and the ground adjoining, with about two acres of the Hydropathic Establishment of Cork. It can hardly be a matter of doubt that the opening of the Cork, Blackrock, and Passage Railway, which will pass within a few yards of the premises, will add a large number to the present visitors to the Cork Hydropathic Establishment, and thereby greatly increase the value of the property. A free ticket for three years will be given on the Cork, Blackrock, and Passage Railway, to the head of the family occupying every new-built house of the annual value of £24 and upwards.—For a statement of the title and rental, with conditions of sale and map of premises, apply to DAVID HALL, Solicitor, 39, South mall; to HENRY M'CARTHY, Secretary, Cork and Passage Railway Company; or to PETER PENNINGTON, the Auctioneer, 81, Patrick-street, Cork

TO BUILDERS AND OTHERS.

MR. LEREW will SELL by AUCTION, at the PREMISES, No. 1, Tent-street, Cecil-square, Hoxton, on MONDAY, SEPTEMBER 24th, at TWELVE, the excellent PLAIN and STAINED GLASS, comprising quarry and stone, square and circle [illegible] Boards, [illegible] and stone, dry cut stuff, quarterings, mahogany, hair and wool carding machines, [illegible] mahogany, [illegible] iron, lathe and turning machine, and loose materials. May be viewed the Saturday prior, and catalogues had on the Premises; and at the Auction Offices, Cecil-street, Strand.

POSTPONEMENT of SALE Bishop of London's Estate—Unbuilt Houses, Parsonage, and Schools, Chelsea.

MESSRS. LOCKWOOD are directed to SELL, by AUCTION, on the LORD HILL, Harrow-road, on WEDNESDAY, OCTOBER 3rd, at three o'clock precisely, in lots, TWELVE substantial and well-built FOUR UNFINISHED HOUSES, substantially erected and in every forward state of completion, and standing on a small piece of Freehold Ground, in the rear, and No. 16, Blomfield-terrace, Westbourne-park, let on No. 1, unfurnished, at the low rent of £8 per annum each, and the others Nos. 1 to 9, inclusive, in Chichester-terrace, immediately in the rear; and No. 16, Blomfield-terrace, Westbourne-park, are unfurnished, let at £12 per annum; the remaining four are nearly finished. The whole are held on lease for terms of [illegible] years from May last, at one and pro rata [illegible] to Patriarch days before the sale, of Messrs. Upperton and Upton, Solicitors, 11, Hare-street, Bethnal-green, and at the Auctioneer's Offices, No. 4, Westbourne-terrace, near the Harrow-road Station, Paddington. Omnibuses pass the door every few minutes, and the Paddington Railway Station is within a short distance.

NEAR STRATFORD, ESSEX.—To BUILDERS and OTHERS

MESSRS. CRAWTER will SELL by AUCTION, at GARRAWAY'S COFFEE-HOUSE, Change Alley, on TUESDAY, OCTOBER 2, at ONE o'clock precisely, thirty lots of FREEHOLD BUILDING LAND, very eligibly situated between Stratford and Leytonstone, only a short distance from the railway stations at Stratford, and a few minutes' walk from the Eastern Counties Railway station at Wanstead, and coming near the West Ham Station. The land is of a fine dry, well-elevated nature, commanding the surrounding neighbourhood, and offers a favourable opportunity for persons in search of building plots possessing the advantages of a rural residence, with ready access to the City. Particulars may be had [illegible] days before the sale, of Messrs. Upperton and Upton, Solicitors, 11, Hare-street, Bethnal-green; at the Inns in the neighbourhood; at Garraways; of JAMES HEATHER, Esq. Solicitor, 17, Paternoster-row; and of Messrs. CRAWTER, 3, Bedford-row.

EAST HILL, WANDSWORTH, SURREY, near the "French Horn."—Valuable and eligible Building Materials, of a capital [illegible] mansion, recently pulled down.

MESSRS. CRAWTER will SELL by AUCTION, on the PREMISES, with [illegible] on TUESDAY, SEPTEMBER 25th, at TWO for HALF-PAST, the [illegible] MATERIALS, [illegible] Bricks, [illegible] Tiles, [illegible] Slates, [illegible] Deals, [illegible] Battens, [illegible] Boards, [illegible] Planks, [illegible] Scantling, [illegible] Quarters, [illegible] Sashes, [illegible] Doors, [illegible] Frames, [illegible] Cupboards, [illegible] Mantels, [illegible] Stoves, [illegible] Ranges, [illegible] Pipes, [illegible] Cisterns, [illegible] Lead, [illegible] Iron, [illegible] Rails, [illegible] Gates, [illegible] Posts, [illegible] Palisades, [illegible] Hurdles, [illegible] Fencing, [illegible] Gravel, [illegible] Sand, [illegible] Lime, [illegible] Timber, [illegible] Carts, four wheel spring van, capital market-cart, water-cart, [illegible] Harness, [illegible] Ladders, [illegible] Scaffold Poles, [illegible] Tools, [illegible] Utensils, and various effects.—May be viewed on the Premises, and catalogues had on the Auctioneer, 11, Charing-cross.

LEIGH, ESSEX.—TO BE LET, a PLOT of GROUND, suitable for ten houses, each 20 feet deep, on a lease of ninety-nine years, commanding a good view of the sea, and in the best part of Leigh, one minute's walk from the railway station. Apply to Mr. R. I. CHRISS, Surveyor, 1, Riches-court, Lime-street, City, and of D. MONTAGUE, Esq. Leigh.

TO BE LET, unfurnished, with immediate possession, by the year, or for a term, commodious PREMISES in Peter-lane, Holborn, with or with out yard and [illegible], well adapted for cabinet or any trade requiring [illegible] room. Rent moderate, or for a long term of years a reduction will be given.—Apply to Mr. WASCELL, General Ironmonger, Peter-lane, Holborn, between the hours of TEN and THREE.

TO BUILDERS, HOTEL-KEEPERS, AND OTHERS.

TO BE LET, a commodious HOUSE, situate at Leigh, Essex, commanding a good view of the sea, about half-way up the hill, and possessing a stable with [illegible] buildings, [illegible] garden and yard, well adapted for a [illegible] with [illegible] &c. [illegible] trade requiring [illegible] room. Rent £25 per annum.—For particulars apply to Mr. R. I. CHRISS, Surveyor, 1, Riches-court, Lime-street, City, and of D. MONTAGUE, Esq. Leigh.

HAVERSTOCK-HILL.—To BUILDERS. TO BE LET, in the MALDEN and QUEEN'S ROAD (both main roads), some commanding FRONTAGES for Shops and Private Houses, which are in the centre of a small forming and improving neighbourhood, and low rents. Bricks supplied at a low price and liberal conditions.—Apply to Mr. JOHN MOORE, 86, Chalton-street, Lutton-square.

TO BUILDERS.—HARROW, MIDDLESEX.

[illegible] Land for [illegible] in this healthy and rising village, called "Harrow-on-the-Builders" in the Building Land Gazette, [illegible] PLOTS of eligible BUILDING LAND, [illegible] Houses, 20 BE LET on Lease.—Apply to Mr. HIGHAM, at the [illegible] Society of London and Counties Freehold Land Society, 35, Farringdon-street. Liberal advances.

FREEHOLD LAND.—To BUILDERS or Parties wishing to build Suburban Residences.—FREEHOLD LAND TO BE SOLD, in some of the most eligible building estates in the neighbourhood of London, viz.:—

FORESTHILL, Croydon Railway.
ST MARGARET'S, near Richmond, South Western Railway.
OAKLANDS and KINGS, Wandsworth, Surrey, ditto.
HOUNSDEN, Windsor, ditto.
TOTTENHAM-GREEN, Eastern Counties Railway.
PUTNEY, South Western Railway.
BEECHEY ESTATE, EALING, Great Western Railway.
The WADDINGTON ESTATE, ENFIELD, Eastern Counties Railway.
WOOD-GREEN, Green-lanes, Hornsea, Great Northern Railway.
OLD FORD, Stratford, Eastern Counties Railway.

Part of the purchase-money may remain at a moderate interest. Parties assisted in the building of their own residences. Several Plots to be Let on Building Lease. Money advanced to respectable parties.—Apply to Mr. GEORGE MORGAN, 5, Chancery-lane.

LOWER THAMES-STREET.—TO BE LET, by Tender, by the Worshipful Company of Armourers and Brasiers, on a lease for seven years from Michaelmas, 1856, the old-established Premises known as the GLOBE YARD WAREHOUSES, situate on the south corner, next to and to the East of those. The lessee will be required to pay all taxes and rates, including sewers and militia rates, and all assessments for sanitary purposes, and the expense of fire insurance, the land-tax being redeemed; and the lease will contain all covenants usual in the Company's leases. Sealed Tenders to be delivered at the Company's Counting-house, on or before the 29th inst., at which time parties only are required to attend the following day, at HALF-PAST TWO o'clock. The Company do not bind themselves to accept the highest or any other Tender.

JOHN PONDFIELD, Clerk.
5, St. Andrew's-court, Holborn.

A LARGE COVERED WHARF to BE LET, or the LEASE will be SOLD. Several merchants and others requiring premises in the neighbourhood of the Regent's-park would find these well adapted to their purpose.—Apply to Mr. WOOD, Parked Wharf, Cumberland Market, Regent's-park.

BOARD of TRADE DEPARTMENT of SCIENCE and ART.—INSTRUCTION in ART—TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL MALL, LONDON

Art-Superintendent—RICHARD REDGRAVE, Esq. R.A.

Head-Master—R. BURCHETT, Esq.

The Courses of Instruction pursued in the School have for their object the systematic training of teachers, male and female, in the practice of art and in the knowledge of its scientific principles, with the view of qualifying them to impart to others a careful Art-education, to develope its relation to the requirements of trade and manufacture and its application to the common uses of life. Special courses are arranged in order to qualify Schoolmasters of Parochial and other Schools to teach Elementary Drawing as a part of General Education concurrent ly with Writing.

The Instruction comprehends the following subjects:—Freehand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera and Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, objects of Still life, &c. the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art. A so, Classes for instruction in the technical processes of Chalk and Lithography on Chalk and Colour. The two last classes for female students only.

Hours of Study—Morning, TEN to THREE; Evening, SEVEN to NINE, daily, except Saturdays. Fees 1l per session, or part of the session. For Evening Classes only 2l per session.

The Class for Practical Geometry and Perspective, or that for Moulding and Casting, may be attended separately on payment of a fee of 1l. per session.

Students have full access to the valuable collections of the museum and library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students not in training, is at 37, Gower-street, Bedford-square. Superintendent, Mrs. Mclan. Fees per session.—Advanced Class, 2l. and 1l., Elementary Class, 1l.; Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall-mall, London.

METROPOLITAN SCHOOL of SCIENCE, applied to MINING and the ARTS. Professor T. KEY, F.R.S. will commence a course of forty-eight LECTURES on PHYSICS, on MONDAY next, the 1st inst., at TWO o'clock. Fee for the course 3l. Dr. HOFMAN, F.R.S. will commence a course of 100 Lectures on CHEMISTRY, on MONDAY, the 8th of OCTOBER, at TEN o'clock. Fee for the course, 4l. Chemical and Metallurgical Laboratories. The Royal Class of Chemistry, the laboratory of the which is under the direction of Dr. HOFMAN, and the Metallurgical laboratory under the direction of Dr. PLAYFAIR, will be opened on MONDAY, the 1st of OCTOBER. At both of these laboratories there are three terms annually. Twelve weeks each. Terms, for working every day in the week 3l. per term. For further particulars, apply at the Museum of Practical Geology.

TRENHAM REEKS, Registrar.

COMPETITIONS.

SALFORD CEMETERY.—The Burial Board Committee of the Corporation of Salford, offer the following premiums viz.:—A PREMIUM of THIRTY GUINEAS for the best SET of DESIGNS for an ENTRANCE LODGE, to contain dwelling for the cemetery keeper, an office, entrance gates and three chapels, with the necessary accommodations. The designs must be accompanied with a specification sufficient to enable a competent party to estimate the cost. The committee will have test scales prepared, and the premium will not be awarded for any set of designs, that cannot, in their opinion, be carried out for a sum not exceeding 2,500l. The committee would prefer the buildings executed in stone, and Roman. The party whose design is approved, will, if satisfactory, be employ ed to carry out the works, on such terms as may be agreed upon. Also a PREMIUM of FIFTEEN GUINEAS for the best DESIGN for LAYING OUT, PLANTING, ORNAMENTING, and DRAINING the GROUND.—Plans of the site, and all further information, may be obtained, on application to the Town Clerk, Town-hall, Salford, and designs must be sent to his office, with a motto, accompanied by a sealed letter, on or before the 1st of OCTOBER.

Town-hall, Salford, September 18, 1855.

THE BURIAL BOARD for the PARISH of WALTHAM HOLY CROSS, in the County of Essex, are desirous of receiving PLANS, DESIGNS, and ESTIMATES, comprising ground plans sections and elevations, for laying out, draining, and fencing a new BURIAL GROUND, with suitable entrance gates, and for building a lodge and receptacle thereon. The ground contains about three acres, a plan of which may be seen, and further information obtained at the Offices of Mr. JOSEPH JESSOPP, Waltham Abbey, Essex, the solicitor to the party whose plans are approved will, at the option of the Board, either have the superintendence of the works or be paid the sum of ten guineas for his trouble. The plans and estimates must be delivered here at Mr. JESSOPP'S Office on or before the 4th day of OCTOBER next. Each plan is to be distinguished by a motto, and a sealed letter similarly marked, containing the author's name and address, to be sent therewith.

Waltham Abbey, September 20, 1855.

BURNLEY MARKET-PLACE.—To ARCHITECTS, &c. The Burnley Market Company hereby give Notice, that they desire to receive DESIGNS for the ALTERATION and IMPROVEMENT of the MARKET PLACE at Burnley, in the county of Lancaster. A premium of 15 guineas will be paid for the best, and a premium of 10 guineas for the second best design.—Further particulars, and a lithographed plan of the site may be had on application to the undersigned, to whom designs must be sent on or before the 30th day of NOVEMBER, 1855. SHAW and SUTCLIFFE, Law Clerks to the Company.

Burnley, Sept. 24, 1855.

AN ESTIMATE for a GLASS-ROOM, 4 yards by 6, and 7 feet high.—Apply at 198, Oxford-street.

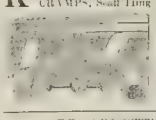
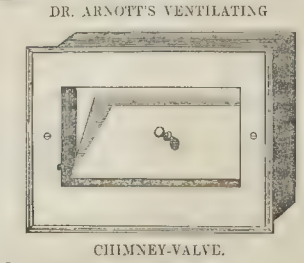
Further information may be obtained of the Rev. ROGER SMITH, Vicar of Arlsey, or of the Architect.

COLLINGE'S PATENT HINGES.—Manufactured by CHARLES C. LLINGE and Co. are now in use in all parts of the world, and give universal satisfaction wherever they are applied to doors, whether in churches, warehouses, and other large buildings, or in private houses. Their peculiar construction and beauty of finish renders them equally suitable for the most elegant as well as the most massive doors, and they are now used in the Houses of Parliament, and in most of the Royal Palaces, Public Buildings, Banks, Insurance Offices, Railway Stations, Hotels, Mansions, and Private Residences throughout the Kingdom. Every description of Butt and Centre Hinges, Locks, Latches, Bolts, and Fastenings, Patent Axle-trees, Sugar-mills, &c.



NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.



House and Coach Builders, Joiners, Cabinet-makers, and others doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co Wholesale Builders and Cabinet Makers, Ironmongers Hall-street, No. 26, Wathing-street City and see in action the very simple, powerful, and expeditious machine, which is the only one yet brought out to perform these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill to use it, being like the older methods to be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery constructed for.

KIMBERLEY'S PATENT FLOORING CRAMPS, Small Iron Brackets, Door Springs Mortising Machines for Erecting Engineers and Joiners, Cabinet Makers, &c. &c. Also, KIMBERLEY'S PATENT GAS-POWER, may be had from any Ironmonger in town or country; from the Patentee, Inge-street, Birmingham; or from the London Agents, Messrs. PUGH and CO 14, King-street, Snowhill, where a stock is kept.

DR. ARNOTT'S VENTILATING

CHIMNEY-VALVE.

Price-lists, post-free, on application to

HART AND SON,

MANUFACTURERS,

53, 54, 55, & 57, WYCH-STREET, STRAND.

TO IRONMONGERS, BUILDERS, &c

PATENT WROUGHT IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 85, High Holborn.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE. Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Girders, and STEWART'S PATENT CAST IRON GAS and WATER PIPES. Office No. 7, Stone-lane London.

CHUBB'S LOCKS, with all the recent improvements; STRONG FIRE-PROOF SAFES, CASH and DEED BOXES.—Complete lists of sizes and prices may be had on application to CHUBB and SON, 57, St. Paul's-churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-field in Wolverhampton.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Fancy, Nails wrought and cut, Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnishers of all kinds, with Patent Shifting Spindles, Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, so much admired by those who have seen each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 70 years, for the supply of Goods from the best Manufactories, at the lowest prices.

1a, Stanhope-street, Clare-market, London.

No. 1461, Class C, Section 1a, BRITISH DEPARTMENT of the PARIS UNIVERSAL EXHIBITION, 1855.

TO BUILDERS, CARPENTERS, JOINERS, &c.

THE following are the PRESENT PRICES of PATENT SASH LINE

No.	3	4	5	6
	8s.	9s.	6d.	7s. 6d. per gross.

At JOHN YOUNGS, Birmingham and Wolverhampton, Agent, Sactor, and General Ironmonger, 18, Blandford-street, Manchester-square, and 121, Baker-street, Portman-square. Every other article equally reasonable.

FOUR CRANES for immediate SALE.—A capital FIVE-TON CRANE, 16 feet 8 inches radius, with cast post and 18 in. CAST IRON CYLINDER, 11 feet deep, to form well; TWO TWO-TON CRANES, with wrought iron posts and jibs, 11 feet radius. All complete, and in excellent working condition. Apply at WALL CRANES, to be sold cheap. Apply at 51, Clerkenwell, E.C.

CAST-IRON PIPES, IRON-WORK FOR OVENS, &c.

RAIN PIPES, &c. — F. A. TIDDEMAN and CO. St. Ann's Wharf, Earl-street, City, near Blackfriars-bridge, Keep a large stock of Rain Pipes, Heads, Stoves, Elbows, &c. Hot-water Pipes and Fittings, Socket Pipes for Water or Gas, Flange Pipes, Hot Water Pipes and Connections, Sash Weights and Cocks, Ornamental Ironwork for Bakers' Ovens of every description, made complete, ready to fix and to send in parts—Prices equal to all competition. Contracts taken to any extent. Goods landed. A powerful crane.

PATENT CLIMAX DOOR-SPRINGS.—A new invention of no noise, holders, and ironmongers in particular, is now one of the most patent improvements in door springs, for the many great and useful advantages it derives from the application of it. Their power keeps the door open and shut, as it were, and this is never out of order. Its use and form is such as to be fixed without any alteration of the door, or the least injury to it. Drawings, with full particulars, may be had from the manufacturers, WEBB and GREENWAY, Steelhouse-lane, Birmingham.

A. MOREWOOD and CO. (late Morewood and Rogers), Dowgate Dock, Upper Thames-street, London, and Baskerville Works, Birmingham, PATENT GALVANIZED TINNED IRON, and GALVANIZED IRON, in Sheets PLAIN or CORRUGATED, and Curved of all Gauges. Manufactured articles always kept in stock, such as pails, scoops, bowls, riddles, skips, &c. of all sizes. Also the Patent Galvanized Tinned Iron Tube, Gas and Water Tubing, Stamped and Moulded Gutters, Wire, Wire Netting, Hooping, Nails, Rivets, &c. Estimates given for Roofs, on every description of Galvanized Building at the OFFICES and WAREHOUSE, DOWGATE DOCK, LONDON.

SKAIFE'S GALVANIZING WORKS, Commercial-road, Lambeth, London. Skaife's process is the most effectual prevent vs against rust, and is extensively used for all purposes where iron is not liable to rust is required. Patent Galvanized Iron supplied in every form. Sheets plain and corrugated. Roofs fixed complete. J. Skaife, sole Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, Plumbic Zinc, and Tiles. An Allowance to the Trade.

SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY REMOVED from BATSFORD to ROW, near London, close to the R.W. Railway Station. A large variety of buildings always on the premises adapted for engine houses, lodges, bazaars, ornamental villas, dwelling-houses, farm buildings, and fire-proof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice.

TO ARCHITECTS, BUILDERS AND THE TRADE.

PATENT PLUMBIC ZINC. GREAT REDUCTION IN PRICE. PLUMBIC ZINC is a perfect amalgamation of Lead and Zinc and not requiring to be painted when fixed, and will last as much as Sheet Lead, is consequently very much cheaper than that material, and at the reduced price costs but little more than Sheet Zinc.

No.			
11	weighs about 18 oz. per foot super.		
12	"	20	"
13	"	21	"
14	"	26	"

Full particulars and the reduced price sent by post on application to A. MOREWOOD and CO. DOWGATE DOCK, LONDON, to whom all letters must be addressed.

JOHN WALKER, MANUFACTURER OF ROOFS, BUILDINGS, &c. &c. Works—Mill-wall, Poplar. Offices—Arthur-street West, London-bridge.

PATENT GALVANIZED IRON. JOHN WALKER, GALVANIZED IRON MERCHANT, &c. The trade supplied Corrugating by steam power capable of 10 tons per day, at the lowest remunerative prices, for bulk.

IRON-FOUNDER, &c. JOHN WALKER, IRON-FOUNDER AND ENGINEER. Orders to any extent can be executed at his Works, Mill-wall, Poplar. Apply at the Works.

BUILDER AND CONTRACTOR. JOHN WALKER, Having his own Saw-mills is enabled to CONTRACT for BUILDERS' WORK, At low prices, and can stent with good work. Apply at his Offices, Arthur-street West, London-bridge.

TUPPER and CARR, Contractors and Manufacturers of all sorts of IRON ROOFING PLAIN, CORRUGATED, PAINTED, or GALVANIZED. Estimates and Drawings furnished on application. Experienced Workmen sent to all parts of the Country. 3, MANSION-HOUSE PLACE, and LIMEHOUSE, LONDON; BERKLEY-STREET, BIRMINGHAM.

TUPPER and CARR'S (Cranford's) PATENT GALVANIZED IRON, For Roofs, Flats, Cisterns, Gas Tubing, Gutters, Pipes, Feeders, &c. To be obtained only at TUPPER and CARR'S WAREHOUSES, REGENT'S CANAL DOCK, LIMEHOUSE, LONDON; or BERKLEY-STREET, BIRMINGHAM. Sheets, Bars, Rods, Hoops, Nails, Rivets, Screws, Wire, and Manufactured Articles, Pails, Coalscoops, Buckets, Pumps, &c. always in Stock. N.B. An allowance to the trade. Address all letters to TUPPER and CARR'S MANSION-HOUSE-PLACE, CITY, LONDON.

JOHN HENDERSON PORTER, ENGINEER AND CONTRACTOR, IRON ROOFING AND ROOFING WORKS, GAS-STREET, BIRMINGHAM. LONDON OFFICE 1, RICHES-COURT, LIME-STREET.

JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superiority of iron manufactured by them for their purposes, in point of lightness, cleanliness, durability, cheapness from infection, and being fire-proof. Drawings and estimates sent free. Island Foundry and Iron Works, Mirfield, London. Offices: 12, Fenchurch-street, City.

PATENT GALVANIZING and CORRUGATING IRONWORKS (Improved Process). WORKS GLASS-HOUSE YARD, opposite the Entrance to the London Docks. GALVANIZED SHEET IRON and WIRE of every description equal in all respects to that produced by any other process. THE TOUGHNESS AND MALLEABILITY of the Iron being preserved. ESTIMATES given for IRON ROOFS, Corrugated Sheds, Houses, &c. A Discount allowed to the Trade.

PATENT IRON ROOFING and IRON BUILDING MANUFACTORY, late the Crystal Palace Company's premises, 14, James-street, Liverpool. N.B. Parties are personally expected to go to the above. LIVERPOOL. FRANCIS MORTON and Co. will supply estimates, plans, &c. for Iron Roofs and Buildings, painted or galvanized, to be erected in any part of the United Kingdom, Europe, or India, being prepared for shipment abroad. F. M. and C. possess extensive premises for the manufacture of Iron Roofing, and are enabled to work on the most moderate terms consistent with good materials and workmanship. N.B. The attention of Agriculturists and Landed Proprietors is most earnestly invited to their Corrugated Iron Farm Buildings, Sheds, Roofs, &c.

STUART AND SMITH'S
PATENT GILL AIR WARMER.

TESTIMONIALS.

RICHARD REDGRAVE, Esq. R.A.

"18, Hyde-park Gate, Kensington, February 24, 1854.

"My dear Sir,—The Air Warmer continues to work very satisfactorily in test, with regard to the main body of the house, and during this weather is champing, even in the painting-room. Mrs Redgrave is extremely pleased with it in her domain, and says that she never enjoyed a winter before as she has done this, since the apparatus was fixed.—I remain, my dear Sir, yours sincerely,

"Mr. J. Johnson Smith." "RICHARD REDGRAVE.

JAMES SILK BUCKINGHAM, Esq late M.P. for Sheffield.

"Stanley-place, St John's-wood, London, January 27th, 1855.

"Dear Sirs,—I am happy to be able to report to you most favourably as to the operation of your Patent Gill Air Warmer, which has exceeded the expectations I had formed of it. From a residence of many years in tropical climates, I have always been peculiarly susceptible of cold since my residence in England; and this has increased with every passing year and decreasing strength. I have, therefore, had recourse, from time to time, to various stoves and other modes of warming the hall and passages of my house, but I have never succeeded till now in producing an equal temperature over every part, and have no other temperature completely under control, which your Air Warmer so effectually gives me. By its use we are really insensible to those changes of temperature and chills which are ordinarily produced in passing from warm rooms to cold halls and passages, and by the closure of doors within doors in the months of December and January. The servants have, as the many other good qualities it possesses. Indeed, I cannot speak too highly of it, and shall lose no opportunity of heartily advising its adoption to all who desire to protect themselves against the changes of temperature in their dwellings. I am, dear Sirs, yours faithfully,

"JAMES SILK BUCKINGHAM.

"To Messrs. Stuart and Smith, Roscoe place, Sheffield."

M. E. HADFIELD, Esq. Fellow of the Institute of British Architects.

"Sheffield, March 6, 1855.

"My dear Sir,—We have kept the Gill Stove in full operation during the past severe weather, and I have much pleasure in saying the result has been most satisfactory. The temperature of the house has been pleasant and equable, and the atmosphere perfectly free from the disagreeable impressions of air produced usually by Hot Air Stoves. I can conscientiously recommend the principle to my friends as cheap and effective.—I am, my dear Sir, yours faithfully,

"Mr. J. Johnson Smith, Roscoe-place." "M. E. HADFIELD.

WILLIAM RUTSON, Esq.

"Newby Wiske, Thirsk, 13th February, 1855.

"Sirs,—I wish to tell you what promise of confidence as well as of economy I have in the Gill Stove placed in the staircase of my house recently built. In spite of the direct attempt to an unusually cold and unfurnished house, with all the doors open into the adjacent rooms, it is keeping up a very certain fall of one or two degrees over the coldest weather. The manner in which the air is admitted gives perfect control over the combustion; and I find, with coke at 18s. 6d per ton, the rate at which it has been fired for the last two or three weeks is 1d. per hour.

"I am, Sirs, yours truly,

"Messrs. Stuart and Smith "WILLIAM RUTSON.

"P.S. Mr Rutson, on looking again sees the cost of coke for his Gill Stove, burning nine hours per diem, from 31st October to 9th February, for six days each week, was 5s. 6d. for coke say about 5d. per day."

EDWARD MARTIN, Esq. M.R.C.S.

"Sheffield, Glossop road, February 27th, 1855.

"My dear Sir,—I have now had the Patent Gill Air Warmer in operation during the winters, and the result has been extremely satisfactory. During the late severe fog I have never had so great that I scarcely knew it was cold in the house at all. Instead of the dust, staircase, and passages, being a receiver of cold air, a genial warmth has been everywhere diffused; and when recovering from colds, my children have had the great benefit of the house being free from draught. To many invalids the invention will prove invaluable, giving them the command of their habitation instead of confining them prisoners to one apartment.—I am, my dear Sir, very truly yours,

"Mr. Johson Smith." "EDWARD MARTIN.

E. F. SANDERSON, Esq.

"West street, Sheffield, 27th March 1855

"Gentlemen,—The Gill Air Warmer you put up for me last year at Endcliffe, and which I regarded with some distrust and doubt, has been thoroughly tested during the past unusually cold winter. Having been accustomed to a dry climate, my family has been painfully sensitive of the damp and chilly air of this country; but by the happy effects of your Air Warmer the house has been kept at a most agreeable temperature by a continued ventilation of pure, warm, fresh air. This excellent apparatus must be invaluable to invalids and delicate persons. I most cordially offer my testimony in approbation of your invention of rendering dwellings at once healthy and comfortable in point of temperature.—I am, yours very truly,

"Messrs. Stuart and Smith, Roscoe-place." "E. F. ANDERSON.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

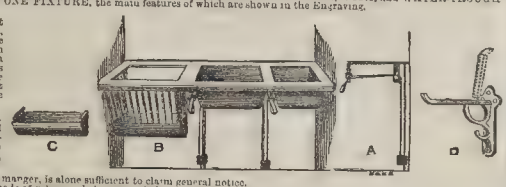
IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.



THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

NEW PATENT INVENTION FOR STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street,

are made important additions to their original Invention of PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, the main features of which are shown in the Engraving.

A represents the Patent Water-guide and Collar-rein, the fall of which is taken to the back of the manger-works with free action, and close up or down the guide-bar, and is noiseless in its operation, as also a sure preventative against the most restive horse being cast in the stall.

B. The Patent Portable Seed-box, may be instantly detached from the rack with the dish-cloth, and impervious to infection. Manufactured plain, galvanized, and enamelled.

C. The Scientific Drench-Horn, made of galvanized sheet-iron, light and durable.

D. The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAMS MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, durable, and impervious to infection. Manufactured plain, galvanized, and enamelled.

IMPROVED SURFACE DRAIN, with safety-valve. Sawyers, Stable Pumps, Loose Box Fittings, Gutta percha Pressing Saddle and Harness Brackets, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

Estimates and Catalogues on application.

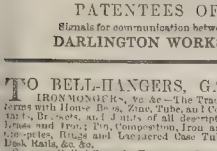
COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS



FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.

Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.

DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire, Gas Pendants, Brackets, and Fittings of all descriptions for Gasfitting, in Brass and Iron; Pin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Ironbered Case Tube for Picture Rods Desk Rails, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. &c.

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

212 MILNER'S HOLDFAST and FIRE-RESISTING SAFES manufactured and warranted with all the inner elements, under their Quadruple patents of 1851, 54, and 1855 in Britain under Gunpowder Proof Solid Lock and Door with the only safe key.

THE STRONGEST, BEST, AND CHEAPEST SAFEGUARDS EXTANT.

MILNER'S PHŒNIX 212 SAFE-WORKS, LIVERPOOL, the most complete establishment extensive in the world. Show-rooms, 61 and 8, Lord-street, Liverpool. London Depôt, 57A, Moorgate street, City. Circulars free by post.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price list, 16s.—35 and 36, High Holborn.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. It may be seen daily in the Stove and Fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO., opposite the Monument, London bridge. Established A.D. 1700.

ROYAL POLYTECHNIC GAS FIRE. BISCHOFFER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful method of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accident from fire are effectually prevented, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at DEFRIES'S Office, 145, Regent street, London.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, 4 feet diameter, pumps, furnace-grates, soot-doors for the same, hot-water pipes, elbows, tees, syphons, throttle valves, stop-cocks, flange and S bends, elbows, &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Iron and Steel Wharf, No. 9, Bankside, London, near the Southwark-iron bridge.

DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by F. EDWARDS, SON, and Co. 22, Poland street, Oxford-street, where one may be seen in daily use. The advantages of this grate consist in the smoke being perfectly consumed, no chimney sweeping being required, and a saving of from 30 to 50 per cent being effected in the consumption of fuel.—Prospectuses, with testimonials, sent on application.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and lightness, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the Kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as lessening the stock of combustible fire-proof construction, particularly in warehouses, dwelling and other domestic buildings, with only a slight increase of cost.

Further information may be obtained of the Proprietor of the patent,—Mr BARRETT, 12, York-place, Adelphi.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,

THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

Sole Manufacturers of Delbruck's Patent Apparatus for Lining Apparatus, and the Introduction of Manufactured Goods to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making the them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be supplied with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

CLARK and HUNT'S IRONMONGERY, STOVE, and METAL WAREHOUSE, 129, Shoreditch. A great variety of Elliptic, Register, and other Stoves, Cottage and best Ranges fitted, always in Stock.

Improved Self-acting Cottage Ranges, with Large Oven and Boiler.

List of Prices had on application at the Warehouse, or by letter prepaid

HEATING BY HOT WATER.
JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS At Messrs. Weeks' establishment, an apparatus with the boiler can be seen daily in full operation, heating the buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 3s. 8d. This achievement in heating by hot water is unprecedented.

BUILDINGS HEATED by HOT WATER.
G. B COOPER, IRONWORKS, 121, DRURY-LANE. Ranges, Hot Plates, Gas Cooking Apparatus, Baths, &c. Ornamental and Constructive Ironwork.

CLARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby destroying Smoke.
This invention is now in operation upon Steam engine Furnaces, of Cornish and Wagon Boilers, and upon Ovens. It is adapted to other description of Furnaces, such as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most perfect of the inventions extant in subduing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.
Ten furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS, BROTHERS, Nine Elms, London.
Address, THE SMOKE-BURNER COMPANY, Nine Elms, London.

IRONMONGERY.
PFEIL AND STEDALL.
THE LARGEST STOCK AT
THE LOWEST PRICE,

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINE, ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY. Established 1774.

LIGHTING of CHURCHES.—F. SKIDMORE and SON, Coventry.
"The unsightly fittings for gas and candles which so frequently disfigure our churches have induced F. A. Skidmore to devote much time to the production of such as may harmonise with the characteristics of the buildings. The designs are founded on personal study of the remains of ancient metal-work on the continent and in England.
F. S. and Son would refer to their works for lighting Chester Cathedral, S. Botolph's, Boston; S. Mary's, Newark; S. Michael's, Coventry; S. John's, Ladywood; and Aston, Birmingham. Bowden, near Manchester, &c.; as also to the following testimonials:—
"We went over the manufactory of Messrs. Skidmore, in Coventry, and were much pleased by the artistical spirit which animates them. A few lots of chushes and other large buildings lighted by them show their endeavours are duly appreciated."—*Builder*
"These rising artists show considerable taste; we shall watch their progress with great interest."—*Ecclesiologist*.
"Mr. Skidmore must be considered an artist of great attainment and still greater promise."—*Morning Chronicle*.
Where limited funds render economy necessary, F. A. S. has prepared designs of a simple and inexpensive character. They have gas standards for finishing ready for immediate use.
Sketches, with estimates sent free by post.

ARROWSMITH and CO. 80, New Bond-street.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster, holding a large number of patents relating to the construction and reparation of the permanent way of railways, are at all times ready to communicate on the subject, and to grant licences for their use. From the facilities thus afforded to companies to negotiate for a number of new lines much trouble and chance of litigation is avoided. The Company undertake arrangements for bringing new inventions on the subject before the public, upon terms advantageous to the proprietors of patents.—Applications may be made to CHARLES MAY, F.R.S. the Manager; or to
WILLIAM HOWDEN, Secretary.

SAFE and PROFITABLE SPECULATION. TO BE DISPOSED OF immediately, a very valuable BUILDING AGREEMENT direct from the freeholder, partly executed some of the houses are completed and occupied, including some houses now in progress, together with the scaffolding, wood, stone, &c. The advertiser being engaged in another business at a distance requiring all his time, will deal liberally, regardless of the value, with a prompt purchaser.—Apply to Mr. GLASIER, Auctioneer, 41, Charing-cross.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

CHEAP AND DURABLE ROOFING.

By Her Majesty's Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS, HER MAJESTY'S COMMISSION OF CUSTOMS, HONOURABLE EAST-INDIA COMPANY, HONOURABLE BOARD OF ORDNANCE, HER MAJESTY'S ESTATE, ISLE OF WIGHT, ROYAL BOTANICAL GARDENS, REGENT'S PARK,

and by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their work. They are likewise CAUTIONED AGAINST MISREPRESENTATION, AS THE ONLY WORKS in Great Britain where the above roofing is made are F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt may be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

SCOTTISH EQUITABLE (MUTUAL) LIFE ASSURANCE SOCIETY.

Established 1831.

At 1st March, 1855, the amount of the accumulated Capital Invested £910,000

And the Annual Revenue derived 165,000

The amount paid to the Representatives of Deceased Members was upwards of 600,000

This affords a great evidence of the soundness, prudence, and economy of the management of the immense benefits to the families of deceased members. Prospectuses and all information apply to WILLIAM COOK, Agent.

No. 1 Bank-buildings, Princes-street, London

ANGLO-ROMANA GAS COMPANY.—The HALF-YEARLY GENERAL MEETING will be held at the LONDON TAVERN, Bishopsgate-street, on WEDNESDAY, the 17th OCTOBER, at 1 p.m.

By order of the Board,

J. SHEPHERD, Gérant.

Order of the day:—

1. Report of Gérant.

2. Report of Committee of Surveillance upon the half-year's account.

3. To declare a Dividend for the half-year last past.

EMPEROR FIRE and LIFE ASSURANCE SOCIETIES, Cannon-street West, London.

TRUSTEES.

Ebenezer Clarke, esq. Richard Harris, esq.

John Smith, esq.

DIRECTORS.

George Angell, esq.	Richard Harris, esq.
Thos. Snow Beck, esq. M.D.	Alfred J. Larking, esq.
John F. Burnand, esq.	Nathaniel J. Powell, esq.
Edward Clarke, esq.	John Smith, esq.
Christopher Cooke, esq.	William Wilson, esq.

The renewal receipts for the ensuing quarter are now ready.

Persons desirous of effecting Life or Fire Insurances are requested to apply at once to the Chief Office, or to the Agents.

FOUR PER CENT. PER ANNUM ALLOWED ON ALL DEPOSITS.

A liberal commission allowed to respectable Agents.

JOHN T. EDDY, Manager.

NORWICH UNION FIRE INSURANCE SOCIETY

(Established 1797.)

Total Amount Insured £30,000,000

Insurances may be effected with this Company upon more favourable terms than with other Offices.

For prospectuses apply at the Society's offices, Surrey-street, Norwich, and 6 Cresc nt, New Bridge-street, Blackfriars, London

PHŒNIX FIRE ASSURANCE COMPANY, LOMBARD-STREET & CHARING-CROSS, LONDON, established in 1782.

DIRECTORS AND DIRECTORS.

Decimus Burton, esq.	William James Lancaster, esq.

TOTTENHAM-GREEN, Eastern Counties Railway.

PUTNEY, South Western Railway

RECTORY ESTATE, EALING, Great Western Railway.

The WALDINGTON ESTATE, ENFIELD, Eastern Counties Railway.

WOOD-GREEN, Green-lanes, Hornsey, Great Northern Railway.

OLD FORD, Stratford, Eastern Counties Railway.

Part of the purchase-money may remain at 5 per cent. interest

Part exchanged for the Builder of their own residences, several Plots to be Let on Building Lease. Money advanced to respectable parties. Apply to Mr. GEORGE MORGAN, 8, Chancery-lane

LOWER THAMES-STREET. — TO BE LET, by Tender for the Wholesale Company of Armourers and Brasiers, on a Lease for Twenty-one years from Midsummer next, the valuable Premises known as the GLOBE-YARD WAREHOUSES, situate in Great-Bone-street, nearly opposite the Custom-house. The lessee will be required to pay all taxes and rates, including sewers and metropolitan, and all assessments for sanitary purposes, and the expense of fire insurance, the land-tax being redeemed; and the lease will contain all covenants usual in the Company's leases. Tenders to be delivered at the Armourers' Hall, Coleman-street, on or before the 3rd OCTOBER next, where plans illustrating the same are required to attend the following day, at 11 o'clock precisely. The Company do not bind themselves to accept the highest or any other Tender.

JOHN PONTIFEX, Clerk.

5, St. Andrew's-court, Holborn.

THE Commissioners of Sewers of the City of London, acting as the Burial-board of the said City, will meet at this Office on TUESDAY, the 2nd OCTOBER, 1855, at TWELVE o'clock at noon, to receive PROPOSALS for RENTING certain ARABLE LAND adjoining the City of London Cemetery, and amounting to about 20 acres, more or less. The land will be let in lots, before the day above-mentioned, but the Board will not bind themselves to accept the highest or any other Tender.

Persons intending to bid are to attend at the time and place above-mentioned, and they will be required to deposit with the Secretary the sum of £5 as a guarantee of their bona fides, which deposit will be returned to them if their tender be not accepted.

The land is to be given into the occupation of the purchaser at any period of the year on one month's notice. A portion of the land has been arable, and is not prepared for grassing. Tender will be received from persons for the whole or any part of the land, the parcels tendered for to be ploughed and sown at per acre per annum; the purchaser to plough and sow the said arable portion of the land; and also at per acre per annum for the whole upon the conveyance, at their own cost, of ploughing and sowing with grass seed the said portion of land. Tenders to be sent in to the undersigned, sealed, and endorsed "Tenders for Land," on or before MONDAY, the 1st OCTOBER next. The Commissioners do not engage to accept any Tender of less depth than 6 feet. Further particulars may be ascertained of the undersigned, or of the Clerk of the Works at the Cemetery.

JOSEPH DAW, Principal Clerk.

Sewers' Office, Guildhall, September 18, 1855.

LEIGH, ESSEX.—TO BE LET, a PLOT of GROUND, sufficient for ten houses, and 180 feet deep, on a lease of ninety-nine years, commanding a good view of the sea, and in the best part of Leigh, one minute's walk from the railway station. For particulars, apply to Mr R. L. CURTIS, Surveyor, 1, Riches-court, Lime-street, City, and of D. MONTAGUE, Esq. Leigh.

TO BREWERS, HOTEL KEEPERS AND OTHERS

TO BE LET, a commodious HOUSE, situate at Leigh, Essex, commanding a good view of the sea, about half-way up the High-road, and a few minutes' walk from the railway station with convenient outbuildings, extensive garden and yard, well adapted for a genteel hotel, with tap-house, stables, &c. the whole occupying a space of about 1 acre 3 roods 20 perches, and held on lease for 21 years. Apply to Mr. R. L. CURTIS, Surveyor, 1, Riches-court, Lime-street, City, and of D. MONTAGUE, Esq. Leigh.

HAVERSTOCK-HILL.—To BUILDERS. TO BE LET, in the MALDEN and QUEENS ROAD (both main roads), some commanding FRONTAGES for shops and Private Houses. All the sewerage is on the estate, roads all formed, and now in hand. Term, ninety-nine years. Low ground-rents. Bricks supplied at a low price and liberal cash advances. —Apply to Mr. JOHN MOORE, 86, Chalton-street, Euston-square

TO BUILDERS.—HARROW, MIDDLESEX.—There is a great demand for houses in this locality; see Paragraph headed "Middlesex," in the Times of 27th inst. "The Build ng Plots at Harrow, on the Pinner Estate, are now in course of active preparation for the erection of good houses. TO BE LET, on Lease and for immediate Building, Plots of Land, with convenient Roads, in the Parish of Harrow, at the Offices of the City of London and Counties Freehold Land Society, 79, Farringdon-street. Liberal advances.

ERITH and ABBEY WOOD.—LAND TO BE LET, on build ng leases, in large or small Plots, situate on an eminence commanding extensive and beautiful views, and known as Jersey Park. Apply to Messrs. RICHARD TRESS and CHAMBERS, 27, Queen-street, Cheapside.

FREEHOLD BUILDING LAND TO BE LET, to Lease for ninety-nine years, at 1s. 6d. per foot front age, 70 feet deep for fourth-rate houses, in large or small plots, within a stone's throw of the Forest Station, and only a short walk from the Stratford station on the Eastern Counties Railway, four miles from the City. Leases granted at once. No law charges or surveyor's fees, and other terms very advantageous.—Apply to Mr. PARSONS, 7, Union court, Old Broad-street, City.

ON LONG BUILDING LEASE.—TO BE LET, an eligible PIECE of GROUND at a very low ground-rent. Apply to Mr. WALTER ERRINGTON, No. 7, Tanner's-hill, Deptford.

TO BUILDERS AND OTHERS.

CAMDEN-TOWN.—BUILDER'S PREMISES TO BE LET, consisting of a good dwelling-house, with office, fitted with every convenience, large light workshop, good yard, and a two-stall stable, with other conveniences for trade. Rent, 65*l.* per annum. Fixtures, including benches, &c., office fittings, iron safes, gas-fittings, &c. 83*l.* For further particulars apply to Messrs. KENNEDY and Co. Auctioneers and Agents, Camden-town.

TO CARPENTERS and BUILDERS, PLUMBERS, PAINTERS, or GLAZIERS.

TO BE LET, to either of the above, the WORK of several DWELLING-HOUSES. Payment will be made in substantial cash, in a first-rate situation near the Regent's-park, in which a fair sum will be advanced; the external pastering steps, landings, porte-cochères, &c. complete.—Apply to Mr. R. H. MOORE, 4, Queen's-terrace, Regent's-park.

WANTED, to Rent or Purchase, about TWENTY ACRES of CHALK LAND, situate on or near the river Thames, in the counties of Kent, Surrey, Essex, or Middlesex. Buildings on the ground not objected to.—Address, JOSEPH FREEMAN and SONS, Battersea.

WANTED, to Rent or Purchase, TEN to TWENTY ACRES of LAND, situate in the Counties of Surrey, within twelve miles of London, and near the Thames or Rail. A small house on the ground not objected to.—Address, JOSEPH FREEMAN and SONS, Battersea.

TO TIMBER MERCHANTS and OTHERS. The Proprietors of Lett's Wharf, Commercial-road, Lambeth, offer the most convenient Wharf for landing all sorts of English Timber, &c. spacious Dry and Drawing Docks, and lofty Cranes, Sawpits for converting Timber, &c. Freights paid on delivery.—Apply to G. NOKES and Co. as above.

WANTED, within a Quarter of a Mile of the Obelisk, Southwark, a HOUSE, containing Twelve or more Rooms; the rent must be moderate, and the situation healthy. Apply by letter, to A. B. at the British and Foreign School Society's House, Borough-road

TO BUILDERS and OTHERS REQUIRING WATER-SIDE PREMISES.—A large covered WHARF TO BE LET, in the neighbourhood of the Regent's-park. Stabling may be had if required. Apply to Mr. WOOD, Market-wharf, Cumberland-market

TONBRIDGE WELLS, near the Railway Goods Station TO BE SOLD, by private contract, the LEASEHOLD unexpired term of forty-six years, from Christmas next, of all those excellent, substantial, and extensive BUSINESS PREMISES, now in the occupation of Mr. Thomas Carter Coutt, Builder, &c. A more compact and convenient site for trade purposes not exceeding 500 yards from the railway station is to be met with. The yard, which is spacious, is enclosed with substantial brick walls; back and front entrance by strong folding doors. The premises stop at 11 p.m. with very ample room, measuring 60 feet by 24 feet, with an excellent slowage under of 16 feet pitch, and quite free from damp. The pits are complete and substantially constructed, and all assessments for sanitary purposes, and the expense of fire insurance, the land-tax being redeemed; and the lease will contain all covenants usual in the Company's leases. Possession to be delivered at Midsummer next. Tenders to be sent in to the undersigned, sealed, and endorsed "Tenders for Land," on or before MONDAY, the 1st OCTOBER next. The Commissioners do not engage to accept any Tender of less depth than 6 feet. Further particulars may be ascertained of the undersigned, or of the Clerk of the Works at the Cemetery.

The Builder.

Vol. XIII.—No. 660.

PERSONS now living, who can remember five or six and thirty years back, will perceive with pleasure that a great change for the better has taken place in the estimation of the fine arts as an aid to education; nevertheless, although this fact has become recognised, we are still, unfortunately, very deficient in adequate means for conveying art-instruction to the artizans and other useful classes in this country, which will enable them to take an equal position with those in similar circumstances in France and Germany.

In the higher walks of art we have produced Flaxman,—a sculptor who, for high and refined conceptions, and for correct execution, has not been surpassed in any country in modern times.

In painting we have the bold and manly works of Reynolds, which unite in many instances the depths of Rembrandt with the glowing colours of Titian; Gainsborough, with his playful and varied tints; the elegant and graceful Lawrence; Opie, Wilson, Turner (a landscape painter, who has never been equalled), and a number of others of the past generation, who have shown by their works that we are not an "unartistic people." Nor do the artists of the present day fail to prove that in England there exists the nucleus of a school of art, which only requires culture to achieve success in the highest path as well as in ornamental works. Our water-colour painters are unequalled; and the artists in other styles show that they are neither deficient in the appreciation of the beauties of colours, in the knowledge and distribution of light and shadow, nor in a true feeling for nature or pure sentiment: some of our living sculptors, too, deservedly rank amongst the first in Europe.

The great mine of English raw-material has, however, been heretofore comparatively unwrought. The masses have been untaught. It is not now denied that the study of art ought to be commenced with the earliest dawnings of sense. We do not mean that parrot kind of education, by which children are taught to jingle rhymes, or to say that twice twelve are twenty-four, three times twelve are thirty-six, without understanding the meaning of the one, or knowing the correctness of the other.

That "a thing of beauty is a joy for ever," is a truth which in the education of the rising generation has not been sufficiently considered. Yet, in order to enable the millions of English workmen, who are to follow us, and take their proper place, to feel this, we must open the young eyes to truthful principles: at present we are deficient of means to work out this desirable result—and should, therefore, carefully look for and apply new methods. It is by this consideration we are led to give our readers some account of a system of education which has been recently introduced, and is comparatively unknown amongst us.

It is a true saying, that at the first moment the child takes nourishment, its education has commenced: the infant has eyes—ears—and other organs of the senses so impressible, that to a great extent they can be moulded at will.

Rousseau, at the commencement of the last century, said that education should be in accordance *with the laws of nature*, and the individuality of man should be respected.

Pestalozzi, that great reformer of his age, carried out a new principle of education—that of "a free and harmonious development of man's being from *within*." He particularly addressed himself to mothers for support; and if we look back to the history of eminent men in this and other countries, we shall find that the bent of the inclination and the extent of knowledge and of intellectual powers would seem to be due to the early teaching and watchful care of the mother. We could fill a page with the names of benefactors of the human race who have confirmed the belief.

All this proves that the early education in most instances makes the man or woman; and considering how important a thing it is to us in the present time of competition amongst nations to improve our artistic skill, it is most desirable that we should begin to consider that a feeling and knowledge of the principles of beauty and art are as necessary as the A B C's and the Multiplication Table, and should be applied as easily.

Feeling strongly on this subject, it is pleasant to know that F. Froëbel, a disciple of Pestalozzi, has introduced a system of education which seems to us to open out a path for great progress. The main desire in Froëbel's plan seems to be to carry out the idea that the fundamental principle of education "is the free, full, and harmonious development of all the faculties of the human being,—not by *pretending* to implant *something better in the children*, but by *educating every power* which a beneficent Creator has bestowed upon them."

The principle of discipline employed enables the teacher to avoid corporeal punishment. This is important; but it is, however, more particularly to this system of education, as applied to the arts, that we would now direct attention. Let us, therefore, get some materials together to show the working of the method.

The first things required are little children. Here then we have the young responsible being. We have, also, clay, wood, and other materials at hand, which can be used to educate them, but require science and philosophy to mould the matters supplied by nature to educational purposes. There is a principle of harmony in all; and it is the first effort of Froëbel's system to encourage and bring it forward. Without, however, dealing more with theory, let us communicate the knowledge which we have gathered by a visit to a school which has been established on this plan at 32, Tavistock-place, by the exertions of Johannes Ronge, a gentleman who has distinguished himself in the cause of education and liberty in Germany.

At the age of two years, and even younger, the children are admitted to the "*Kinder Garten*" (children's garden), and are presented with their first school gift. This consists of several tiny balls, each one forming a portion of the colour of the rainbow. The balls are neatly covered with worsted. The young child has thus put at the command of its hand and before its eyes a harmony of colours—representatives of the *harmony which slumbers in his soul*.

The spherical form of the ball is not without its use, for this, like the colours, is a harmony: the heavenly bodies are of this shape, so are the drops of rain and the sparkling dew: it is the most perfect of forms. The ball also calls forth the physical faculty of the child: when he throws it, the sight, the ear, muscles, and will are called into action.

The second gift comprises a roller, a cylinder, and cube. In these simple figures may be found the shapes of all objects in creation: the child does not know this, and yet he feels it. To help those who are more advanced to comprehend this principle, strings are fastened to the cubes, and moved so that the rotation shows the circle and cylinder within the cube, and also the cube and circle within the cylinder. This gift teaches the scholar the variety of forms, and he has acquired a certain amount of education when he can recognise the cube, the circle, and the cylinder.

Then comes the third gift. A very infant will lisp, "Give me something to do;" and it is certain that if the natural energies are not occupied in a right direction, they will, in nine cases out of ten, take an opposite course. The child will either create or destroy; and nothing can have a greater effect in promoting the latter faculty than the toys which are generally put into the hands of the young. A doll for little girls; the dress handsome, and not intended to be taken off: this is the ultimatum: nothing is left to improve upon: in consequence, the destruction soon follows. A hundred other toys are also finished to the children's hands, and meet with the same fate, causing more damage to the moral qualities of the children than the value of the playthings.

The feeling for investigation which is natural to us all to a certain extent, leads to the demolition of the toys. The child wishes to know what is in the inside of the monstrosities which squeal and mew and are supposed to represent a dog or pussy-cat.

The natural curiosity of the infant is, to a certain extent, gratified when he comes into possession of the third gift, by finding the cube—the form of which he has already become acquainted with—divided into eight parts: he has thus partially seen the inside of it, and finds, also, that it multiplies the means of enjoyment. He sets four of them together, and declares that they make a capital table. "Why, it is exactly like my old cube in shape, but smaller: however, it is like a table: I wonder if I can make a chair," and so on. "One, two, three, four, form the table; one, two, three, form the chair (fig. 1), &c.: I have made two tables, and have only two more cubes left; I must make the seats without backs (fig. 2). We need not go further into details, for all must know how the child or children will build, and plan, and invent with these forms: see the annexed examples (fig. 3): he builds a cross (fig. 4), one, two, three—the foundation; *one, two*—he finds a centre, and yet they fall—his last remaining cube consolidates the structure. The child has by the knowledge of this fact acquired an important part of both artistic and moral education.

The fourth gift, the oblong cube (fig. 5), also divided, adds to the stock of materials, with which he soon delights to build, or arrange in geometrical forms (fig. 6). He makes houses and bridges, and it is curious to watch the varied talent of a number of children: one says, "I will build a church:" he is active at the commencement, but tires, and another completes it.

It has been considered best, in the child-gardens, to arrange three classes of six each in one room. In the first instance, every scholar is encouraged to bring out his own ideas, and then is gently helped. The members of each class join in competition; and at intervals the three classes assemble together, and design geometrical forms, and build, by their joint exertions and materials, towns and villages, with churches, bridges, and accessories.

The fifth gift is the cube still more minutely divided. The pupil has now twenty-seven cubes in one box, eighteen of which are again divided (fig. 7). The triangle, that valuable form in art, is now added to the stock, which is still further increased by the sixth gift. He sees that all the varied forms of fig. 8 are but portions of his original cube, and that by them he can produce designs which not only convey pleasure to himself, but also to others (figs. 9 and 10).

This part of Froëbel's system of education is varied in many ways. To the very young two thin sticks are given, and something like the following dialogue takes place:—"See what I

FROËBEL'S SYSTEM OF TEACHING CHILDREN.

have made with two sticks." "Why, it is like a V," says one of the most learned. "I have made a table," says another. "It is like a T also," says the child of letters. "I have made a cross, see" (fig. 11); "I have made another cross." "One of them is like an X," says a little literary friend; and it is curious to watch at what an early time and how strongly the peculiar bent of the inclination shows itself.

Three sticks are brought into requisition, then four, five, and more; then houses, ladders, staircases. "I have made an axe," says one boy; others, a tree, ship, spades; one, however, with much self-complacency, says, "See here that cross boy George ran away when he was told to be quiet; but he fell down and upset the table. Here he is." The chief artist of the class, however, defies competition by his representation of "The Bird drinking from the Fountain in the Garden" (fig. 11).

Another sort of play, but which also has at the same time its philosophy, is carried out by each child being provided with a number of thin pieces of wood, which he is instructed to cut in equal lengths: he has also given to him a quantity of steeped peas. The pieces of wood are then stuck into the peas, and cubes, angles, and many forms, both complicated and beautiful, are formed by this process (fig. 12).

Squared paper is also used, which tends to develop skill in both design and colour.

"Play is the labour of the child." Froëbel has therefore invented numerous games and amusements. One of these is paper-plaiting. It will be observed, that the difference between the articles used in the infant-garden and the toys which are commonly given to children, is that the former, as we have already observed, are of finished materials, offered to the child to look at or be used in a given form, in imitation of the ideas of others. Froëbel supplies the children with materials with which they can produce an unlimited number of forms.

For the purpose of plaiting, paper of various colours is cut not quite to the sides, in equal divisions, and which are crossed by pieces of paper of corresponding width, of different colours; the child proceeding in the following manner:—The mat or paper, cut as already mentioned, is laid straight before the child on the table, and a slip of the paper put into the slit at the end of a wooden needle, which is passed through the cut mat, and the slip of paper drawn after it. The pupil may either have patterns to copy, or he may be left to design for himself. When the mat is so far finished, the whole of the slips are carefully arranged in their proper places, and the sides of the mat gummed or pasted on them, to keep them from moving: the whole mat is then gummed to a piece of plain paper, and, if necessary, varnished; and when dry it will be fit to exhibit. Besides mats for vases and figures, letter-racks, pocket-books, and various articles may be made out of these simple pieces of paper. It is a pleasant sight to see children of from three to four years old engaged on this work: one has got a blue ground, and chooses the most violent contrast of red to cross against it: another with a nicer sense of harmony, chooses a less harsh tint,—and some seem to have so little idea of the opposition of colours, that they choose a tint which can be barely discerned from the back-ground. Some are so apt and patient, that row after row is finished with neatness and despatch, while others tear the papers, and are less steady at their work—all have not the same gifts, but it is evident that to those who have the least eye for colour the practice of thus playing with various hues, aided by the example of others, must be a great means of improving the natural talents.

Not only are those faculties which tend to the practice of the arts, mathematics, and mechanics, the perceptions of form, figure, beauty, harmony of colour, manual dexterity order, and perseverance, fundamentally taught

by this system, but also the harmony of sounds, for many of the games with cubes, balls, rollers, &c. are accompanied with songs, which awaken the intellect, exercise the voice, and give a taste for the harmony of sounds, which are so fitting in company, with harmony of form and colour.

The multiplication table and the simple rules of arithmetic, are taught by means of the cubes: they carry the numbers in their little hands, and soon acquire a fixed knowledge of the value of figures; thus,—

Twice □ cube are □ □ cubes.

Twice □ □ cubes are □ □ □ □ cubes.

Nor has Froëbel in his system for the infant-gardens, neglected the development of the eyes, ears, and muscles, and for this purpose gymnastics and other games are brought into requisition.

Many of the little songs are of great beauty. In some of these games the motions of the husbandman, and the working in various trades, are simulated in the songs. The children are also provided with leaping-poles, swings, &c. &c.

It is satisfactory to know that the system of Pestalozzi is extending in practice, particularly in those schools in which the strength of our industry is raised. In the Home and Colonial Schools in the Gray's Inn-lane, from eighty to 100 young women are constantly in the course of education for schoolmistresses, and from this place 200 and upwards of skilful teachers, who have passed the examination of the Government inspectors, and been provided with proper diplomas, yearly start forth to various parts of the country and colonies to spread the blessings of education amongst the multitude.

In this school there are from 300 to 400 children of different ages, who, whilst obtaining a good education themselves, are the means also of perfecting the teachers, who are themselves arranged in classes, presided over by professors of distinguished ability. In this school the children, to a great extent, are taught not so much from books as from the objects themselves, and models.

Here is a museum of minerals,—of the cotton plant, the various stages of its manufacture,—models or drawings of the machinery used in the working of the raw into the manufactured material.

There are the horns, skulls, skins, and skeletons of animals, plants, seeds, roots, &c. &c. In fact, practical knowledge is here taught in such a manner that we believe many a child of six years old, educated at this school, will puzzle some of the elders who have been brought up in the old methods, and who shake their heads, and say they "do not know what things are coming to."

It is an important fact that the *useful knowledge* materially helps the acquirement of figures and the higher branches of education, and nothing which we remember to have seen for years has given us more satisfaction than a careful visit to this institution, in which we knew not whether most to admire the system and order which prevails, or the intelligence of the teachers, or the scholars.

In the infant classes, models of furniture and articles of domestic use, &c. are employed, as a means of education, but for the purpose of paving the way to a knowledge of art Froëbel's system might, for the infants, with great advantage, be introduced in all its integrity. It is true that art-education is not overlooked in the Home and Colonial, and some of the other schools of similar kind in London, but it is not made of sufficient importance. In the national schools, which are doing so much good in all directions, drawing is now, fortunately, not altogether neglected. A lesson is usually given twice a week, the master employing a black board, and the pupils following him on their slates. This, although an improvement upon the old plan, is, for any substantial purpose, totally inadequate. Why not have a lesson on art every morning and afternoon, and let it be done in earnest, and not treated as a piece of education tagged on as a useless ornament? Only let this be done with energy and judgment and we venture to predict that many millions of sterling value will be added in a few years to the art manufactures of the country.

That the germ of art slumbers amongst our population has been shown to us in many instances. One of the most striking is the following:—

In the wild lead-mining district of Alston, the miners consist of an honest, industrious, and intelligent body of men. Until lately, however, not much care was taken for education amongst them. Mr. Sopwith, a gentleman well known for his ability and anxiety to improve those by whom he is surrounded, was appointed to the management of this important neighbourhood, and found only a school of the old fashion, and which was quite inadequate. He went vigorously to work to reform this evil, and in the new school made the practice and knowledge of drawing an important consideration. In a short time this produced visible effects, and we saw not long ago specimens of the work of the children of the rough miners, consisting of outline and shadow heads after Michelangelo and Raffaelle, flowers copied from nature, and views. These children commenced by drawing the simple geometrical forms on a large scale, without instruments, and it would surprise the practised artist more than others to note the wonderful firmness of hand shown in the latter copies, and the skill and taste of the more finished works. Who knows but that from this school amongst the moors of Alston, some artists may rise up who may do credit to our school of painting. At any rate, the knowledge thus acquired will not make the boys less intelligent as miners, or the girls less useful as wives or mothers.

THE RECENT HISTORY OF ARCHITECTURE.*

WORKS OF HENRY HOLLAND, JAMES WYATT, AND OTHERS.

DURING the period to which we have referred, such study of Gothic architecture as there was, was almost confined to the style of the ecclesiastical buildings. Just as it was a popular axiom that there was one general style called "Grecian," which consisted in the application of "the five orders," so it was held that there was another called "Gothic," which was expressed by pointed arches. With that the ordinary public were *au bout de leur Latin*. We must not complain too much of the architects. To have suggested that a building might be very good in art, and correct in style, and yet have none of the usual landmarks, would have been for the architect to raise a question as to his knowledge of his art and his business. We fear the architect has still the same kind of difficulty, albeit modified in degree, or in kind; for it is quite true that an ill-educated public makes bad architects. Ignorance ever believeth itself to be very wise. Therefore, it was that the country gentleman built for himself a "castle," or an "abbey," or at least a pointed—arched, and buttressed structure, which to him seemed the kind of residence that must have been common in the middle ages. "The house at Lee," said Walpole, "which was but indifferent before, has been, by the skill and art of Mr. Wyatt, admirably improved in the disposition of the apartments. Amongst them is a very beautiful library, finished in the most perfect style of Gothic taste. The three fronts of the house convey the idea of a small convent, never attempted to be demolished, but partly modernized, and adapted to the habitation of a gentleman's family; and the gently spreading trees, and the adjoining rivulet, seem to correspond with it, and to form a site selected by monks, with a view to retirement and meditation; while at the same time, no distant prospects tantalized them with views of opulence and busy society." Such, as a specimen of amateur criticism by the great potentate in what was called art, is enough to make us forswear again looking for information at any similar source. Brayley, however, supplies some particulars, which will assist in forming an opinion of the taste of the day. He says, "A small spire crowns the dome of the library, which as Lord Orford has intimated, is fitted up with the greatest elegance; and though an eye critically versed in the *minutiæ* of our ancient architecture, may discover some anomalies in the ornaments, when considered in reference to the pure style of any particular era, yet the effect of the whole is extremely beautiful; and the mind dwells with admiration on the fine example of good workmanship and exalted taste which this structure exhibits. The general plan is an ellipsis, formed into eight compartments by clustered shafts: from these springs the tracery of the dome, the centre of which admits the light that falls upon it from the windows in the spire above, and is mellowed by passing through a medium of stained and semi-transparent glass. In a recess at the east end is a kind of altar-table, over which are paintings of eight small whole-lengths by Mr. John Carter," "in niches, with various beautiful minute figures above, of angels playing on different musical instruments." "The entrance to the library gives the idea of a small oratory or chantry chapel." The *Strawberry Closet* was "a small room, very elegantly fitted up in the Gothic taste, with a ceiling of rich tracery." The point to observe herein, is, that with all the errors in detail, and the more serious misconception as to the purpose of *art*, there was some result not wholly contemptible: whilst the present system is to vilify and shut out, totally, all that was done under such circumstances;—though a generous, as well as an enlightened spirit, would not deny at least the possibility, of reaping advantage from recent examples, as well as from those which are old. To the state of taste referred to are due such mansions as Eaton Hall, near Chester, the residence of the Marquis of Westminster, by Porden, and which, whilst it is a good instance of the kind of mistake that was made, it must be allowed is in parts, by no means without merit. The imitation of the Chester Chapter House in one portion of the building, may be mentioned as serving to exemplify the effect which was in some measure obtained, and yet the mistaken conception in this class of works generally. We are not sure whether the earlier, as well as the later building at Fonthill, is to be credited to James Wyatt; but however defective his work might be, the interior must have been impressive even to a modern purist in Gothic. "Old Fonthill," said the author of "Vathek," "had a very ample lofty echoing hall,—one of the largest in the kingdom. Numerous doors led from it into different parts of the house, through dim winding passages. It was from that I introduced the hall [of Eblis, in Vathek]—the idea of the hall of Eblis being generated by my own. My imagination magnified and coloured it with the eastern character." Our quotation is from the *New Monthly Magazine* for June, 1844, where are some interesting personal "recollections" of that singular character, the owner of Fonthill, contributed, we believe, by Mr. Cyrus Redding. On Beckford's return from Portugal, he embellished the house at Fonthill; but in 1801 he sold its contents by auction, preparatory to the erection of a new building, and the formation of another collection of works of art. The grand feature of the new building was a hall or octagon, spanned by lofty arches springing from massive clustered piers, and giving an effect which might be compared with that of the central space of the cathedrals. This octagon was crowned by a tower, rising to the height of 260 or 270 feet, and from which there was a view described in one of the few popular periodicals of the time now before us, as "of vast extent, including many counties in its circumference." The interior was fitted up with extraordinary splendour. Throughout, however, the idea of imitating or representing relics of former art, and almost, as we may say, *incidents of history*, is remarkable. An "oratory" was indispensable.

* See p. 446, *ante*.

The "solemn gloom" of this was approached by doors hung with crimson curtains; the fan-groining of the roof was entirely gilt; from the centre hung an elaborately chased golden lamp; the altar had a statue of St. Anthony, in alabaster, by Rossi, and massive candelabra of silver gilt. The account says that no description can convey an idea of the effect of "this solemn recess," or of "the awful sensations" it inspired. Yet, if we understand rightly, all this may have involved, from the manner in which the effect was attained, a great mistake in point of *art*. In 1822, not long after the completion of this splendid house, and after its proprietor had spent about 270,000*l.* upon it in sixteen or seventeen years, he sold it for 350,000*l.* and soon after this, the great tower, which seems to have been hastily and slightly constructed, fell to the ground. Wyatt's works in Gothic architecture, belonged to that class where what was stone is reproduced in cement, or is constructed in wood, painted and sanded; and in the cathedrals which suffered under his hands, many are the maledictions which now are hurled at the restless ghost of James Wyatt. To him the profession mainly owes the suspicion with which they have had to contend in the case of works of restoration, from that day to this. During the period of the war, however, the study of Gothic architecture was growing. John Carter's drawings of cathedrals and other edifices were published by the Society of Antiquaries, at intervals from 1795 to 1813. Mr. Britton commenced his "Architectural Antiquities" in 1805. Eaton Hall was in progress from 1803, we believe, up to 1825. Ashridge House was commenced in 1803; the works after 1813, up to 1820, being under Sir Jeffrey Wyatville. The list might be continued with the works by Sir Robert Smirke, Mr. T. Hopper, Messrs. Nash, Repton, Blore, and others, and with those at Windsor Castle, Alton Towers, and Abbotsford,—down to the house at Toddington, in 1819, which has been fully illustrated by Mr. Britton, whose work may be referred to with advantage for further particulars as to this period. The last-mentioned building, and Cossey Hall, Norfolk, by Mr. J. C. Buckler, are far superior to most of those we have mentioned. Toddington, the residence of Charles Hanbury Tracey, esq. afterwards Lord Sudeley, is said to be designed by the owner. There is still much of ecclesiastical character in certain parts; but the style, which somewhat resembles that of the Houses of Parliament, is not a slavish representation of any kind of Gothic. The plan is that of a modern house. There is a grand tower in the centre. The details are very elaborate, and show great progress in the knowledge of principles; but internally, modern furniture in some of the rooms seems slightly inconsistent. Cossey, or Costessey Hall, of which there is a good model at the Institute of British Architects, is a very extensive building, in the red brick Tudor style, and is, perhaps, still one of the best specimens of domestic Gothic architecture in the kingdom. Credit for great part of the design has been given to Lady Stafford. We are, however, anticipating dates. But we should have mentioned a few other works of the class referred to, and of varying degrees of merit. Ravensworth Castle, in the "castellated Gothic" style, was commenced in 1808. The original drawings were by Nash, but the works carried out are said to have been designed by the Hon. T. Liddell, a son of Lord Ravensworth. Lowther Castle, Cumberland, by Sir Robert Smirke, was commenced in 1808. It has a hall 60 feet by 30 feet, and a staircase, 60 feet square, and 90 feet in height. This building, therefore, as well as Eastnor Castle, Herefordshire, by the same architect, may show the effect which was aimed at, and to which we referred above as worthy of consideration in any comparison of the styles of different dates; but the result in these particular cases, Mr. Britton says, fails to satisfy. Other important works of the class were those carried out at Corsham House, by Nash, or his pupil, Mr. J. A. Repton. Mr. Britton's Illustrations of Cashiobury will supply information as to what was done there by Wyatt. The taste of the Lord Shrewsbury, of 1814, at Alton Towers, seems to have been illustrative of the mistakes which could be committed. An imitation of Stonehenge, a tower down in a hollow, and a Gothic bridge over no water, are quoted as amongst the absurdities perpetrated in spite of architects, and in contempt of art, and which the late Welby Pugin had some trouble in undoing. Penrhyn Castle, near Beaumarris, if we may speak from recollection, realises some considerable effect as a work of castellated character,—a great contrast to Downton Castle, Herefordshire, the residence of the celebrated writer on Taste, Mr. R. Payne Knight, or Grwch Castle, near Abergeley, Wales (perhaps later in date), at the foot of a hill, both buildings mere card-board-like imitations of fortresses. The work of Sir Jeffrey Wyatville, at Windsor, at length, and itself alone, showed to some extent of what the castellated Gothic style could be made capable. During this time, as it will not be forgotten, the influence of the Greek models, was progressing. Covent Garden Theatre was completed in 1809, by Sir Robert Smirke, and at the same date, we find one of the chief works of Harrison, of Chester, the Exchange at Manchester, lately remodelled. Aikin's Essay on the Doric order, an important book at one time, was published in 1810.

We are reminded by the name of a writer above mentioned, that our subject would hardly be complete without a reference, however slight, to the discussion which was carried on towards the commencement of the present century, on the principles of taste. The exemplification of the different theories was made through the medium of landscape-gardening; Sir Uvedale Price and Payne Knight advocating the rugged and irregular, both for houses and grounds,—of which theory the latter gave an unfortunate practical illustration in his house at Downton; whilst the professional gardener Repton argued for smoothness, neatness, and simplicity as the accessories to a mansion. Each of these authorities published treatises, to which might be added those of the Rev W. Gilpin and many others, which along with the French opinions to which we alluded on the subject of the ideal, might be very important to us in an estimate of the true object of art, and the relation of art and nature. So far, we see no reason to doubt that the proper force of architecture is effected through *contrast* with the beauty of nature: we believe also that the efforts of the picturesque school of landscape-gardening are generally unsuccessful. The whole accessories of the foreground of a house have a chief place in the effect: the architect should therefore be entrusted with them, and must be qualified accordingly. The villas and suburban palaces of Italy depend very greatly for their effect upon the intimate union, and yet the contrast of the objects of nature and art, and the same considerations were not neglected in the English Elizabethan buildings. The palace of St. Cloud seems to owe what effect it has mainly to the treatment of accessories such as we refer to. Those who would know what can result at home, from the course we have recommended, should see the grand effect of the house at Chatsworth, to which, amongst the other additions to the work of Talman, Sir Jeffrey Wyatville added a noble terrace, and "architectural garden."

With reference to the attempts in Gothic architecture, it was, as we have said, long, before principles of detail, such as now appear simple, were understood. Meanwhile, many churches had to be built. In these the Palladian, the Greek, or the Gothic was adopted, with no particular preference that we can discover for either style. In general works which we shall have to notice, as erected after the end of the war in 1815, the same contradiction of styles is continued in the works of Soane, Nash, Smirke, and others. The first of these, indeed, seems to have adopted the Gothic style in but few instances, and then in deference to the dictation of employers.

After 1809, the date of Covent Garden Theatre, the number of porticoes in London largely increased,—and it may be interesting to contrast the use which was made of the Greek models in England with that made by the German architects, as Schinkel and Klenze, whose career towards 1810 was about to commence. One acquisition which resulted from the war was that of the Rosetta stone. Contributing in a most important degree to the knowledge of hieroglyphics, the study led to those occasional experiments in Egyptian architecture which were not more successful here than in France.

We humbly confess that whilst we give facts and suggestions which may be useful in comprehending the curious position in which our art is now placed, we require all the assistance of our thoughtful readers, in arriving at conclusions from the premises; and the difficulty of even a clear reflection of *facts* was never greater than in the period of the different fashions which we find during the course of the professional career of Nash and his contemporaries, but which peculiar conjuncture of taste appertains to the admired architecture of Munich, as to the less-appreciated works of London.

THE CHEMISTRY OF BUILDING MATERIALS.*

THE word "silicious," which gives its title to a large class of bodies, is derived from the Latin word "*silex*," meaning flint, and from its genitive *silicis*, we have *silicious*, the purport being, that all stones so termed have in them about half of their weight of the same substance as ordinary flint, which, when pure, is named Silica. Sandstones are practically nothing but silica. Some rocks, such as serpentine, have not more than about 42 per cent. of silica; but, on the whole, the silicious building stones contain from 50 to 98 per cent. of silica, and those which are in use in this country, namely, sandstone with 98, and granite with 74·84, consist more of silica than of anything else. What the old Romans called *silex*, the modern chemist thus calls silica and also silicic acid, for, though it is not sour to the taste, it has the powers and properties of an acid. The chemist prepares it in the state of an exceedingly fine white powder, and in that condition it does not dissolve in water or melt by ordinary heat, and is not affected by any of the common acids: it is, in fact, one of the most enduring and least alterable substances known to us. Yet we can procure it in a soft, pulpy, and gelatinous form, in which you could not tell it from ordinary boiled starch in the condition in which the laundress uses it; and we find that, artificially, we can crystallize it. In nature we obtain it in the form of regular geometrical figures, having always either the same shape or shapes, limited within a certain series. In crystals it always holds that the smaller are the most perfect. They will be seen to be shapes which represent what crystallographers term a six-sided prism; in other words, a column of any length which has six faces, the top of each column or crystal showing a hexagonal plane exactly like the top of the six-sided honeycomb cell of the bee. Such six-sided prisms may exist entire, but are very rare, as the majority of silicious crystalline forms have shot up out of the rock, which is their matrix, and are embedded at one extremity in it. The large crystals are especially irregular.

The substance, then, termed flint, silex, silica, silicic acid, or rock crystal, is the main constituent of the building stones about to be noticed, and in fact, is the main constituent of the great masses of rocks occurring over the surface of the globe. There are just two great masses of mineral matter forming rocks, the one lime, the other silica, and it is to the silicious descriptions of rock we are now to look.

Granite derives its name from the Latin word *granum*, a grain, so that the word literally means grainstone—in other words, a granular rock, a rock made up of separate grains, sufficiently large and unlike each other to be distinguished by the naked eye. The smaller grained granites, those where the crystals are the smallest, illustrate best the granular character of the stone, especially if we look at it on the unpolished side. Such a granite as the Peterhead illustrates the point well, though perhaps the grains are rather larger than in the majority of granites used for building purposes. Now the grains making up granite are always crystalline; that is to say, they are not rounded in form, but, like the crystals which I referred to previously, they have planes or flat spaces,

* See pp. 435 and 447, *ante*

and sharply defined angles or corners. In those granites where the particles are small, these grains appear embedded or wedged together like so many paving stones in the street. They appear as if they had been all crushed or wedged, or rammed together, so as to fit tightly, and do not permit one readily to see what the particular configuration of each single grain is. But in favourable circumstances, we see granite permit each one of its constituents to lose this irregular and squeezed condition, and to shoot up into separate crystals, each crystal projecting from the under mass, as church spires or obelisks do from the general outline of a city, and being unlike the others in shape, colour, and size.

These constituents are each of importance in reference to the durability and beauty of granite as a building stone.

The first is quartz, rock crystal, or silica. To illustrate this constituent of granite rocks, large crystals like Cairngorm were exhibited, some of them many feet in length, and from a single one of which, it was said, as much as 400*l.* worth of jewellery had been cut in Edinburgh. These crystals, continued the lecturer, are one of the three components of granite, which, instead of remaining wedged in among the others, has shot up in separate spires or distinct crystalline columns.

In regard to colour, rock crystal or silica may be termed colourless. The very word "rock crystal" is intended to signify something occurring in rocks as colourless as the purest glass; and large quantities of silica are found native, totally devoid of any tint. It is often also grey, or yellow, or amber, as in our most prized Cairngorms, also dark brown and black, and purple and blue as in the amethyst. So far as shape is concerned, it is in the six-sided column already referred to. As for size, we may have it from minute grains up to crystals some feet in length.

This quartz is one of the silicious components of granite, but silica occurs again in the other two crystalline bodies making up the mass.

The second of these bodies is named *mica*, from the Latin word to shine—this substance having a glistening appearance. Though it may appear brown or nearly black by reflected light, it is transparent, and in large pieces used to be employed instead of glass for the panes of windows. It is still employed in India and in Russia for the windows of stables and for lanterns, being less easily broken than glass. At the edges it spontaneously splits into a number of films or layers like so many thin sheets of paper; and we find that this characteristic of mica gives a peculiar character to the sandstone derived from granite, or other rocks containing this body. The mica is that constituent, in the granite, which occasions the black spots appearing through it. In every specimen of granite, whatever be its prevailing character, these black spots occur, and it is they which mainly produce the mottled or granular appearance, and enable the eye to detect readily the want of homogeneous structure. Occasionally the dark spots are owing to dark quartz, but not generally.

The third constituent of granite is called felspar, from a German word literally signifying field-spar. It is a shining opaque spar. Its colour varies. It is sometimes white; more frequently of a flesh, or grey, or cream colour, and occasionally of deep red. Specimens of Labrador felspar show a very beautiful iridescent appearance, or a peculiar play of colours like the wings of a pigeon, or the feathers of a peacock. This felspar is a very abundant mineral, and forms a large part of all granite as well as of other rocks.

Granite, then, is a granular rock or grainstone, with three kinds of crystalline grains, one set being of silica or rock crystal, which are often perfectly colourless like glass, the second set being of shining glistening mica, and the third set being grains of felspar, glassy-like, but opaque, and generally whitish or flesh-coloured, so as to resemble a glassy marble.

Now as to the relative significance to builders of these bodies, which of the three is the most important in reference to the qualities of granite as a building stone? Without doubt, the most important is the felspar. In the first place, it mainly determines the colours of the granites, which are of various tints, some having a grey colour, approaching to white, many having a duskier or darker grey, some having a very deep grey, many with a brownish or buff colour, some of a bluish or flesh colour. The well-known Peterhead granite is of a deep flesh colour; and in the Oriental granites we have a full red colour. Now the colour of granite is mainly determined by the felspar, and next by the mica, which, if very dark, comes to affect the shade of the felspar. But of more importance than as affecting the colour, is the relation of the felspar to the durability of the stone. The condition of the felspar mainly determines whether the granite shall maintain its proverbial character of being the most lasting of stones, or whether it shall be one of those which most easily give way. Felspar is always the first ingredient in granite to yield, if the granite undergoes marked disintegration or decay. As already mentioned, felspar contains two alkalis, potash and soda. These are soluble in rain water, and many specimens of felspar, though when one looks on them they seem to form a solid, enduring, stony mass, very rapidly give way when exposed to the air, and come, indeed, by so crumbling, to be the source of a substance of great value, namely, the fine clay used in the making of porcelain. But, of course, to convert building stones into porcelain clay, however valuable that may be, is not what the architect desires to accomplish. Accordingly, in selecting granites, one needs to be very careful in watching the condition of the felspar; for the more glossy and brilliant it appears, and the less earthy its appearance, the more enduring is it likely to be. It is not desirable, moreover, in selecting a granite for building purposes, where one knows nothing of its history and of its trial in actual buildings, to select one where the quantity of felspar is very large. The Scottish granites are proverbially lasting, and no one of them is very rich in large crystals of felspar. The Cornish granites, on the other hand, have large crystals of felspar in them, and that felspar has not a glassy, but an earthy look; and many of them may be made in a few weeks or months to crumble into a white mass, and then permit the mica and quartz to separate from the felspar, and thus the whole undergoes complete destruction. Occasionally, however, granites are found with large crystals of all the three kinds. In some instances we have a perfect granite on a large scale—everything big; but where the mica and quartz are small, and the felspar crystals are large, and are at the same time rough or soft, then the granite is suspicious, and is to be distrusted.

The least important of the constituents, in a building point of view, is the mica. It is the least abundant constituent of granite. It does not readily decay, though it will split into scales if long acted upon; but it is not readily affected by rain or wind, and is not soluble in water.

The quartz or silica may be put in the middle, between the mica and the felspar, as an index to the building value of the granite. It is the hardest constituent, and is that which makes it difficult to hew. It should always, however, be abundant; for if granite be troublesome to cut, it compensates for that by its lastingness. The value of this lastingness is to a great extent to be measured by the difficulty in polishing, hewing, or otherwise fashioning the stone.

So far as regards the localities of granite in this country, I need scarcely mention them further than to say, that the Grampians consist largely of granite; that in Cumberland, Devonshire, and Cornwall, we have it abundantly; and that in Ireland it is found in large quantity in the county of Wicklow. For paving purposes—a use to which it is not much applied in Scotland, where it is generally objected to on the score of its becoming slippery, though in London, Liverpool, and elsewhere, it is largely used in that way—the Cornish or Devonshire granites, which are not so hard as the Scotch granites, are held to be better, as you do not require for paving the most enduring granite, nor is there any architectural beauty to sacrifice in the choice of a paving stone. It is not like the case of a splendid erection, in which the smallest deteriorating influence is something to be lamented, and for paving you do not require a very hard stone: indeed, the harder granites certainly become too slippery. For building purposes, with the partial exception of the Dartmoor granite, the grey Aberdeen granite, and the red Peterhead granite, stand above all others in this country. A special value attaches to the granite of Mount Edgecumbe, Cornwall, which has felspar, with nearly as deep a red as in the Oriental granite, and for its beauty it is now selected for a few purposes; but it is not largely used, so far as I know, anywhere.

There is a kind of granite called Syenite, which I merely name. It may be called a large grained granite. It receives its name from a district in Upper Egypt, where large quantities of it occur. Some of the most beautiful Egyptian statues are cut out of it. Syenite does not differ markedly from granite in constitution, except that it has no mica in its chemical constitution, but another mineral like it, which is called "hornblende."

It will be observed, that in mica there is a very large amount of silica, as well as in felspar, so that if we were to put down the silica separately, in each of the crystalline components, it would occur three times over.

Alumina, the next important component of granite, is what has been mentioned as clay earth. It occurs almost entirely in the felspar; oxide of iron also occurring sometimes in small quantity in the darker rock crystals, and giving them a tint. To mica it gives its brown tint, and to felspar its flesh or red colour. Lime, magnesia, and potash, occur alike in the felspar and the mica, but not in the quartz.

I now pass from granite to other silicious building stones—and first of the sandstones. They are for us by far the most important of silicious stones. They are, in a chemical point of view, most interesting, as they contain the largest amount of silica of any stones. They are geologically derived from other rocks, as, for example, granite; and their characters vary according to the rocks they are derived from. I do not propose to trace minutely their derivation. That must be left to the teacher of geology. I will notice, however, that as silica is the most abundant constituent of all rocky masses, and as it is a body very little alterable, it may separate from any one of these rocks, and come ultimately to form a sandstone. Putting aside limestones and calcareous rocks, the characteristic ingredients of which are lime or magnesia, or both, you will find that the trap-rocks, basalts, greenstones, the whole of our slates, syenite, gneiss, serpentine, and many others, contain more of silica than of anything else. They are all liable to be worn down to powder by the action of rain, wind, and water, and the silica thus worn out of them is not a thing alterable in itself, and may be deposited and reformed into a stone. Sandstone may thus be derived from a great number of rocks, unlike in kind, and the qualities of the sandstone will correspondingly vary. If we take, for example, whinstone, a name we apply to what geologists term greenstone, we shall find that a very large portion of that stone is silica, as we have seen that a still larger portion of granite is silica. Now, if whinstone be reduced to fine powder by the action of the water of rivers, or of the currents or tides of seas, we may ultimately have the silica separated from the other components of the stone, and converted into a solid mass of sandstone. Sandstones so produced are to be found all the world over, differing in character according to their derivation from one kind of rock or from another. If I were to reduce one of the granites or whinstones to fine powder, and then throw the powder into a large vessel containing water, stir it there rapidly, allow it to stand, and in a short while pour off the water, and along with it the finer powder, I should be able in this way to separate the lighter from the heavier particles, and ultimately I should find left the heaviest portion, namely, the silica or sand, as a sediment at the bottom, which might be dried up into a substance resembling an unconcreted or unconsolidated sandstone. What I do on a small scale, when I stir the powdered rock with water, and then pour off the water, rivers and seas have been doing since the beginning to rocks on a very large scale, and in a much more effectual way. Suppose, then, what we can see any day

in our Highland hills, that we have the granite or greenstone undergoing disintegration, whether by the action of the water or the air, and that the fragments are borne down and fall into the bed of the stream. They are carried along, rubbing against each other, and in fact grinding each other, so that all angularity of shape disappears. The separated crystals, for example, as in the case of granite, which once showed a six-sided pyramid or prism, become very soon rounded pebbles; and then the pebbles, rubbing against each other, are ground to still finer powder, and this carried down into lakes or the sea, is ultimately spread out in a stratum on the bottom of the body of water. Still more, the waves dashing on the rocks close to the shore, break down fragments from them, and rub these fragments against each other, and when they are brought back by the tide they are never sharp or angular, but always rounded pebbles, and some of them so round that you would imagine they had been cast in a mould. This rubbing, moreover, reduces much of the fragments made to undergo friction against each other to fine sand, so that there is nothing we so much expect to see along the shores of a lake or river as this sand. Altogether, when we look at the effect of water in wearing down and grinding against each other masses of stone, we find that there are three sets of things encountered in river beds, on the shores of lakes, and on the beaches of seas, namely, *first*, pebbles or gravel, always rounded, however sharp or crystalline they may have been at first; *secondly*, mud, that is to say, a fine soft powder, diffused like boiled starch in water; and *thirdly*, sand in fineness intermediate between the pebbles and the mud, and forming a hard powder. Now each one of these three deposits may become altered in structure, by allowing it simply to remain at rest at the bottom, covered over by successive sediments deposited above it, and ultimately it may become changed by the lapse of time, by pressure, by heat, and by other causes, into a solid mass of stone. The pebbles or gravel, for example, become agglutinated, or cemented, or concreted, by clay, or lime, or iron, or all the three, into a mass we call conglomerate or pudding-stone. Masses formed of mud are baked as clay in the bottom of a lake or sea, and hardened into slates or flag-stones. Further, as the pebbles and the mud may thus concrete into pudding-stones and slates, so the sand may concrete into sandstone. Now, as we have two great classes of original rocks, which are worn down into mud, or pebbles, or sand, there are two classes of derived rocks from them, the one derived from calcareous rocks, and, like them, calcareous, the other derived from silicious rocks, and, like them, silicious. If we go to the sea-shore in some districts, we shall find a shell-sand,—a sand consisting altogether, or nearly altogether, of broken-down shells, and a very fine mud, consisting of ground-down shells; and again, we find that sand or mud cohering together into a solid mass, very like these slates or these paving-stones. But these are never called sandstones. They are all, whatever be their structure or appearance, or real or conceived origin, named limestones; and therefore I say nothing more of them at present. By the word sandstone we understand a body derived from the wearing down of silicious rocks, such as granite or greenstone, and which consist in great part of silica, or of silica alone.

As no sandstone probably has been derived from the mere wearing down of a mass of silica, but all of them from the wearing down of rocks like granite, having other things in them besides silica, we may expect them all more or less to contain foreign matters. Thus most of our sandstones contain some mica. We may see it very fine in some sandstones, giving them glossiness or a shining micacious glistening appearance. These glistening particles, however, are not desirable. They tend, like so many wedges, to split up the stone. They are deposited between one quantity of sand-powder that has been laid down, and another coming above it, and therefore disturb the continuity of the mass. The less mica, then, the better. This mica, moreover, as it contains in itself a portion of lime and of alumina, may transfer these to the sandstone; and when we come to look at the recorded analyses of sandstone, some of them are found to contain sensible quantities of lime and of alumina, which interrupt the solidity, the continuity, and the homogeneousness of the stone, and lessen its building value. Then we may have a fine black matter in these stones. When sand has been carried down a river, on the banks of which plants grow and are blown over into the stream where they float down till they become water-logged and sink, there we very often have vegetable matter interspersed through the stone. These carbonaceous layers are to be found in more or less quantity in many sandstones. All these non-silicious substances interfere with the continuity, solidity, and tenacity of the stone, so that the less of them the better. Not only plants, but also animals, especially shell-fish, are found in the neighbourhood of these sandstones, or actually embedded in them, and from these animal and plant remains, bituminous matters are frequently transferred to the sandstones. If we take a fragment of Binney sandstone and heat it at a candle or lamp, a black fiery matter will be found to ooze out in little globules. This bituminous matter probably does no harm to the stone: I rather suppose, that like varnish, it protects it from the action of the atmosphere: at all events, it is a peculiarity in this stone, and may be connected with the peculiar changes in colour which it undergoes when exposed to the open air.*

* To be continued.

PROVINCIAL NEWS.

Ryde.—The esplanade is making progress towards completion. It is contemplated, we hear, to plant a row of trees upon it when finished.

Winchester.—The new barrack buildings to accommodate the officers of the garrison here, the money for the erection of which was voted in the Ordnance Estimates of the past session of Parliament, are, according to the *Hampshire Advertiser*, to be commenced shortly. The site selected for the building is on the south side of the parade, and on the ground now occupied by the washhouses, armourers' shop and forge, and other offices, which are to be removed to the low ground abutting on the eastern portion of the parade, near the hospital, which is to be removed, and a new one erected, no site for which is yet fixed upon, but several suitable plots of land have been offered to the authorities for the purpose.

Dovelais.—The new school-rooms here, designed by Sir Charles Barry, are in the late Gothic style; but the unity of the design is broken in the smaller side windows, which are probably deviations from the original plan; yet the general effect is said to be good, and to suggest reminiscences of Tintern Abbey. The building consists of seven school-rooms, one for infants, and three each for boys and girls. The whole building is 235 feet long, by 100 feet in the centre, *i.e.* the infant school is 100 feet long, by 35 feet wide, and 50 feet high. The boys' school, south end, is 100 feet long, by 30 feet wide, and 30 feet high; and there are two class-rooms, one 25 feet by 21 feet, and the other 45 feet by 24 feet. The girls' school-rooms, north end, three in number, are of the same dimensions as those of the south end. The infant school has a singing gallery at one end and raised seats at the other. The whole structure is said to have cost about 7,000*l.* The builder was Mr. John Gabe, of Cardiff.

Birmingham.—The tender of Mr. Barnsley for the erection of the new museums at the Queen's College, from the designs of Mr. J. J. Bateman, architect, having been accepted, the work is already commenced. The buildings will comprise three museums, upwards of 40 feet square. The upper museum will be about 40 feet in height, with two tiers of galleries, and lighted from the roof, the ceiling being finished with Gothic spandril ribs, corbels, and pendants, in character with the other portions of the College. The lower museum will be entered from the quadrangle of the College, and be appropriated to anatomy, and will have a gallery round three sides of the room. The two upper museums will be appropriated to engineering models, mineralogy, geology, natural history, &c. The contributions towards the building are, we understand, very inadequate to meet the necessary expenditure; but when was it otherwise with shabby "Brummagem?"

Warrington.—The ceremony of laying the foundation-stone of the Warrington new museum and library took place on Thursday before last.——The new market committee received nineteen tenders for the erection of the market, only one of them from Warrington. There were ten estimates for the erection of the shed and iron-work, and eight for the erection of the building complete. The lowest tender for the iron-work and for the buildings separately, when put together amounted to 5,729*l.* The estimate for the iron-work was 1,400*l.* or 1,000*l.* less than that of Messrs. Fox and Henderson. The highest tender for all complete was 13,000*l.* but was reduced afterwards to 8,750*l.* on account of an error. The lowest tender was 1,000*l.* more than the sum named in the advertisement, but the architect, according to the *Manchester Courier*, is able to give a satisfactory explanation for the difference in his estimate and that of the lowest tender. The iron has advanced in price equal to 175*l.*: the stone selected by the committee is 6d. per foot dearer than that at first agreed upon. Stone pilasters have been substituted for brick ones. The turret for the clocks, through being removed from the west end to the south side, makes an additional expense of 400*l.* These items, if reduced, it is remarked, will bring the cost of the market-house and covered shed to about the amount fixed upon, viz. 5,000*l.* The market committee were to meet again to know what deductions the person that sent in the lowest tender can make, and then a meeting of the council is to be called to decide the question finally.

CAMBRIDGE CONDUIT.

The corporation of Cambridge having enlarged the market-place of that city, it was resolved to take down the old conduit, which, by the enlargement, has been left in the south-east angle of the square. Accordingly, in April last, architects were invited to compete for the erection of a new conduit, as our readers have already heard, and the design of Mr. G. M. Hills, of London having been selected, a contract has been entered into for the execution of the work. The structure consists of a base of two steps, on which is placed a basin: in the centre of this rises a fountain, from which the water will flow in four streams into the lower basin, and thence escape by eight spouts either into the vessels of the inhabitants who use the water, or as waste into a flushing tank which has been constructed for the cleansing of the sewers. The basin and fountain are covered by a square canopy, carried on four piers, with an arch and gable in each face, and the building is crowned by pinnacles, with niches for sculpture at the angles, and a spire in the centre. The steps and basin, and plinths of the piers, are of Cheesewring granite, the superstructure of Ancaster stone, from the quarries of Mr. Wilson, of Grantham. The contractors for the work are Messrs. Boulton and Harris, of Lambeth. The cost, which has been somewhat increased beyond the first intention, by the use of granite instead of Portland stone, will be about 560*l.*

The new conduit will stand in the centre of the market square, and will harmonize in style with Great St. Mary's Church, which now bounds the site on the west side. The old conduit, which will thus be superseded (but we hope it will be elsewhere preserved), was built in 1614, from funds supplied by the celebrated Thomas Hobson, the carrier, whose stringency in letting his horses, for hire, only each one in his proper turn, regardless of the whims or likings of his customers, gave rise to the well-known proverb of "Hobson's choice—that or none." He appears to have been a wealthy and respected citizen; and, not content with merely raising the edifice, he left by will the sum of 10*l.* for further beautifying it, with an estate, the annual proceeds of which have ever since been available for its maintenance. Thomas Hobson died January 1st, 1630.

We are disposed to think the Cambridge citizens will have reason to be pleased with their new conduit.

THE CAMBRIDGE CONDUIT.—Mr. Gordon M. Hills, Architect.

LEADEN PIPES IN THE SUPPLY OF WATER AND BEER.

IT is now some years since we first brought the subject of leaden pipes in water supply, and the poisonous contamination of water by lead in certain circumstances, under notice. To the surprise of the public, some time thereafter, it turned out that chemists, even some well known to fame, entirely differed as to the precise circumstances under which leaden pipes became dangerous in use for water supply. Soft water was most to be feared in the estimation of one chemist, hard in that of another, and the result has been a perplexity on the subject which still occasionally disturbs the public mind. That leaden pipes do, in some circumstances, poison the water that passes through them there is but too good reason to be assured, and it does seem passing strange that there should be two opinions amongst chemists on such a subject. Meantime, our present purpose is not to excite anything like alarm, but, on the contrary, to notice certain facts which tend toward the future settlement of this important question independently of chemists altogether, and certain others which will at least assist in hastening this desirable state of matters, by pointing out a new source of danger which has lately been not only discovered but already guarded against by our acute neighbours the French.

The Minister of Commerce, Agriculture, and Public Works in France, we are informed, has issued a circular, under the head of public health, to all prefects, calling upon them to put a stop to the use of lead, copper, and zinc pipes, in breweries, and states that experience proves that beer, by simple contact with lead, takes up an appreciable quantity of that metal, and thus acquires poisonous properties. In continuation, he points out that not only are leaden pipes used in breweries, but that a custom has arisen in taverns, and in houses where wine is sold, of using a small pump, which communicates with the barrels in the cellars by means of a leaden pipe, and that the use of lead is in this instance peculiarly objectionable. The minister instances a case in which a whole family was poisoned by using for some time a pump of this kind for drawing their ordinary consumption of wine.

The pumps alluded to by the French minister are, doubtless, either the same as our own "beer-engines," or an equivalent for them, and it is well known that leaden pipes are used in connection with such engines; so that to the other mischiefs which beer and other intoxicating liquors produce must be added the serious influence of lead poisons on the drinker. If the precise amount of injury done in this way could be ascertained, there is little doubt but that it would be of a startling character, and only second in importance to that produced by lead in water supply.

The means of putting an end to these evils without the aid of chemists is now a question of great and pressing importance. It was proposed, so long ago as the time of Vitruvius (and even then the risk of poisoning from the use of water conveyed through leaden pipes was known), that lead should not be used at all in connection with water supply; but the fact is, that lead cannot well be got entirely rid of, as it is so suitable, in many respects, to the purposes of water supply; and, unless the new metal aluminium turn out to be of cheap, easy, and abundant attainment, lead doubtless *will* continue to be persistently made use of far more than either zinc, tin, iron, or gutta percha, for small pipes in water supply. In these circumstances, if leaden pipes could be well coated interiorly with some more or less innocuous substance, we should have all that was requisite for the safe conveyance of our water supply through leaden pipes. A patent, we observe, has been taken out by Mr. F. S. Thomas, of Fulham, and Mr. W. E. Tilley, of Kirby-street, for an improved process for plating or coating lead, &c. with aluminium, tin, and other substances, by help of the galvanic battery. Could they not easily coat the interior of leaden water-pipes, as well as cisterns, by means of such a process, and so put an end to the poisoning of water by lead? Aluminium ought to make an excellent coating for such a purpose, and thus applied, might perhaps do as well as if the pipe were altogether composed of it. The coating of insoluble sulphates with which nature itself often remedies this its own evil, is itself suggestive, and perhaps some other modes of coating the interior of leaden water-pipes artificially and systematically might be based on this natural process.

The most hopeful and efficient remedy, however, now practically available, appears to be that provided under a patent secured by Mr. E. K. Davis, of Lambeth, for the coating (amongst other processes) of the interior of leaden water-pipes with a thin film or inner tube of tin, or of compositions of gum-lacs and india-rubber or gutta-percha, in a soft or fluid state, by means of improvements in the usual machinery for making leaden pipes themselves. The coating appears (in pieces of the various tubes which we have purposely examined) to be perfectly adherent, of quite sufficient thickness, and otherwise efficient in its formation for the purpose in view.

The mechanism by means of which these and other processes are effected is ingenious, and the patent of Mr. Davis comprehends various improvements, such as a double-action hydraulic press, the casing of soft metal pipes with block tin and other metals, the forcing of soft metals by compressed air, the plating of sheets in a way described, the making of dies for coating lead and other pipes with other metals, a mode of making still-worms, the coating of soft metal pipes with gutta-percha, india-rubber, &c. and various other improvements. It is with special reference to a remedy for the contamination of water by lead that we have examined the pipes coated under this patent, and we think it well deserves the public patronage, as tending towards the realization of that very desirable end.

CHURCH-BUILDING NEWS.

Croydon.—A site of land at Southbridge, and funds for the erection of another church, have been given, the one by a parishioner, and the other by a clerical non-parishioner; the result of which will be that a commodious structure will shortly be erected, in a locality greatly in need of spiritual instruction. The poor will be especially cared for in the provision made in the sittings. The contracts are already out for the erection of the edifice.

Breda (Sussex).—Broad Oak Wesleyan Methodist Chapel being too small to accommodate the increasing number of Wesleyan Methodists in this neighbourhood, the brothers Coleman, of Chitcomb Farm, have devoted a considerable sum to enlarge and rebuild the chapel, which is now done. Messrs. Crisford and Son were the builders. It was opened for Divine service on the 6th inst.

Kingston.—Last Tuesday, during the alterations now being made in the restoration of Kingston Church, by Mr. White, of Taunton, the Rev. Eccles John Carter, the rector, discovered a long-hidden Early English window, in the western end of the north aisle. The rev. gentleman was so pleased with his discovery, that, according to the *Taunton Courier*, he generously offered to restore the window to its original state at his own cost.

St. Hilary and Truro (Cornwall).—The Bishop of Exeter was to visit the west of Cornwall in the latter part of the present month, for the purpose of consecrating the church of St. Hilary, rebuilt after its destruction by fire, and the new district church of St. George's, Truro.

Shrewsbury.—On Friday before last the first stone was laid of a parsonage at Shelton, near this town. The ground, within a few yards of the Shelton turnpike gate, and in sight of the renowned oak, was given by Mr. Robert Burton, of Longner-hall.

Ilkeston.—The restoration and enlargement of the parish church has proceeded so far that October 18 is fixed for the opening. At present the sum of 600*l.* is wanting; and owing to the laudable desire of the committee to render the building every way worthy of its purpose, 300*l.* more will have to be expended on the tower.

Nottingham.—The chapel recently erected in connection with the General Hospital of this town was formally opened on Thursday before last. The chapel is erected on the space formerly vacant intervening between the west end of the main building and the fever wards. The gable ends point north and south, the latter projecting considerably beyond the front of the main building. It is approached from the centre gallery, the entrance doors being at the north-east and north-west corners of the edifice. The length is 54½ feet, and breadth 19½ feet, with a highly pitched roof. Both internally and externally the appearance of the chapel, says the *Notts Guardian*, is sufficient to indicate its character, and yet it harmonizes with the general architecture of the building. The interior arrangements are devoid of ornamentation. The low open benches are all arranged due east and west, with an aisle running along the centre of the room, and provide accommodation for about 100 persons.

Bangor.—The first stone of a new English Congregational chapel here was laid on 28th ult. The building will afford accommodation for 400 persons on the ground-floor, with a provision for a gallery. The architect, who is likewise superintending the work, is Mr. George Northcroft; the builder, Mr. John Barry, both of Bangor. The style is early English. Cost, including land, 1,100*l.*

Otley.—The Independent Chapel here is in course of enlargement, and is so arranged by the architect, Mr. Shaw, of Leeds, that two class-rooms under the new wing of the chapel will communicate with the school, and can be thrown open when required for large meetings, &c. A vestry is also provided. The gallery will contain a new organ, now building by Messrs. Forster and Andrews, of Hull, and will also give accommodation to the scholars during Divine worship.

Burley.—A monument has been recently erected in the south transept of St. Matthias's Church, Burley, near Leeds, to the memory of the late Mrs. Smith, wife of Mr. John Smith, of Burley House, banker. The monument is a piece of sculpture by Mr. Benjamin Spence, pupil of Mr. Gibson, and it was executed in Rome, from whence the sculptor has lately returned. The design, in mezzo-relievo, represents an angel bearing the spirit of the deceased to heaven. It is executed in white marble, and is inserted in a carved tabernacle or niche, in Sicilian marble, with crocketed canopy and enriched buttresses, of the Decorated style, in conformity with the architecture of the building. The deceased lady had taken a deep interest in the erection of the church, which she did not live to see completed.

Spofforth.—On Tuesday before last, the parish church of Spofforth was re-opened by the Bishop of Ripon. It had fallen into a state of dilapidation and decay, and has been restored, according to the original design, under the superintendence of Mr. J. W. Hugall, of Cheltenham, architect. Col. Wyndham, the principal proprietor in the parish, encouraged the undertaking at the commencement by a subscription of 300*l.*; the farmers and inhabitants consented to a rate of 500*l.* besides subscribing liberally; and the rector, the Rev. J. Tripp, made himself responsible for nearly 500*l.* But as the cost amounts to upwards of 2,160*l.* and the various contributions to not more than 1,860*l.* there still remains a debt of about 300*l.* Mr. G. Roberts, of Clifford, was the contractor for the works. The style adopted or rather followed by the architect, is Norman, the principal features of the old church being of that period. Owing to the dangerous condition of the south arcade, it has been rebuilt, but the north one remains as originally erected. The two aisles were in a ruinous condition, and consequently taken down. The walls of these aisles, as well as those of the chancel, had no foundations, and it is a matter for surprise how they remained standing so long. The fabric now consists of a perpendicular tower, with a western door and three-light window above, and a very lofty arch opening into the nave. The floor has been appropriated as a vestry, an oak screen having been fixed in the archway. The nave, and north and south aisles, porch, and chancel, are of Norman character. The Norman south doorway has been restored. A font of Caen stone is placed at the west end of the south aisle, on a pavement of Minton's encaustic tiles. The nave and aisles are seated with low benches of stained deal, but doors have been

added to them. The pulpit is of Caen stone, carved and buttressed at the angles. The chancel is approached by three steps: at the rails are other three, and the altar stands upon a pace paved with Minton's tiles. A double sedilia is provided in the south wall: oak rails upon carved pillars cross the chancel. The ancient stone altar has been restored. Three stained glass windows, the offerings of Mr. Mrs. and Miss Faviell, of Stockeld-park, occupy the east wall; they contain representations of the Crucifixion of Our Lord, with Abraham's offering of his Son beneath; the Resurrection, and Jonah's release from the Whale; and in the centre window the Ascension, with the taking of Elijah into Heaven. There is an arcaded reredos, with interlaced arches of stone. All the roofs are of stained deal, boarded and open. A hot-water apparatus has been put down.

ST. JAMES'S PARK.

Sir B. Hall has announced his intention of not proceeding with the proposed road through the enclosure until the project has been considered by Parliament.

In Sir B. Hall's letter respecting the proposed new road through St. James's-park, he lays stress on the desirableness of relieving the traffic for carriages along Parliament-street. Would not this end be attained by opening a carriage-road from Trafalgar-square, at Spring-gardens' corner (where now exists a passage for pedestrians only), and so on to Storey's-gate? This would require the removal of a few houses certainly, but not so many as would be necessary were the park bisected. A Reader.

Another writer, "A Londoner," points out that by taking off a small piece of the garden of St. James's Palace, a safe and good way from the park to Pall-mall may be obtained by the existing road, past the end of the German Chapel. "If a foot suspension-bridge be thrown across the water," he adds, "I think it would be a boon to the public, but a carriage-road is an insult to botany and good sense."

NEW FORMULA FOR CAST-IRON BEAMS.

Mr. Fairbairn, in his recent work on cast and wrought iron, states that, for bridges, warehouses, &c. cast-iron beams should not be loaded with more than one-fifth or one-sixth of the breaking weight. I beg to send you a simple formula of my own, which will give the safe load in cwts. equally distributed at one-fifth the breaking weight. It is derived from Mr. Hodgkinson's formula for the breaking weight in tons in the middle:—

$$W = \frac{26\,a\,d}{l}$$

where W = breaking weight in tons.
a = area of bottom flange in inches.
d = depth of beam in inches.
l = length between supports in inches.

The new formula is—

$$S = \frac{2}{3}\,\frac{26\,a\,d}{L}$$

where S = safe load equally distributed in cwts.
a = area of bottom flange in inches.
d = depth of beam in inches.
L = length between supports in feet.

The beams are supposed to be of Mr. Hodgkinson's section of greatest strength, the flanges being in the proportion of 6 to 1.

Robt. H. Skaife.

Forging and Welding Iron.—An invention has been patented by a Mr. Bertram, to cause the sheets of iron used in forming steam-boilers, or in iron ship and bridge building, &c. to be suitably formed at the edges to allow them to be welded together. It is not essential to thicken or give any particular form to the edges of the sheets of metal, as they may be welded together by overlapping their edges, or otherwise; and where ribs have been heretofore used, the sheets of iron are to be forged or rolled with ribs thereon, to admit the edges of one sheet being welded to those of another sheet, either longitudinally or transversely.

A NEW PAINT.

Through the medium of your widely-circulating columns, I beg to call the attention of the building world in general, and your correspondent "T. W." in particular, to the results of some experiments I have lately made, with the view of discovering a "*wash*," or "*paint*," more durable than the "lime-wash," so often complained of, and at the same time cheaper than the "oil-paint" in ordinary use. This object, I think, I have fully attained.

The first method I will introduce to your notice, consists in boiling together for half an hour,

Commercial "Shell-lac," ..... 1 lb.
Ditto "Borax" (Tincal)... 1½ „
And water.....10=1 imp. gall.

allowing the solution to stand until *quite cold*, and then straining through bags of some strong coarse material: the solution, thus prepared, should be mixed with from 6 lbs. to 8 lbs. of finely-ground *dry* "*white lead*,"* and raised once more to the boiling point, with *constant agitation*. When cool, it may be stowed away in casks, or carboys (or any description of vessel which will *perfectly* exclude the air), and will be fit for use at any time, with the simple preparation of *stirring it well up*.

This paint laid on stone, brick, stucco, or wood, in the usual manner, will dry in from thirty minutes to two hours, according to the density or porosity of the material, so that a day would be more than sufficient time for the "laying on" and drying of several coats: it possesses a mellow pinkish-white colour, very agreeable to the eye, produced by the combination of the "dead-white" of the lead, with the brownish-red dye contained in the crude shell-lac. Of course, different tints can be communicated to the paint by using various kinds of shell-lac, and the admixture of small quantities of "*ochre*," "*sienna*," &c.

The same menstruum is obviously available for other colours, for internal decorations, and for every purpose will be found to possess many advantages. Its *cost* is less than half that of the composition generally employed, being (at the most) about 2s. 6d. per gallon. When first laid on it has a tendency to come off when rubbed, but a few showers of rain will put a stop to this disadvantage.

Of its durability at present I can say very little, sufficient time not having elapsed; but I do know, that a stream of boiling water directed upon a wall three hours after it had been painted (with two coats) by the preceding process, had no effect whatever; and I feel certain, that an after coat of the solution of silicate of potash and soda I recommended in the *Builder* a few weeks since, for the cure of "salt in walls" (*carefully filtered*), would render my new paint *quite permanent*.

The name I have given it is "The Lacboracic Paint."

The same solution (of borax and shell-lac) used for the paint, renders hydraulic cement, plaster, &c. more durable, if the former is employed as the moistening agent. The second method of painting that I have found successful is this:—The colour is to be mixed with a solution of glue (about a *pound*, dissolved in a gallon of water), and the house or wall to be painted with the same: when nearly dry, it must be brushed over with a strong infusion of *oak-bark*, or *catechu*. As will be readily seen, the *rationale* of this is,—the *gelatine* (*glue*) is converted into *leather* (tannate of gelatine) by the *tannic acid* of the oak-bark, and thus protects the colour from sun and rain. If the oak-bark infusion is applied while the coat of glue and colour is too wet, the result will be a very unequal surface: if, on the other hand, *too much* time is allowed to pass, the action of the tannic acid takes place with greater difficulty, and the paint is not likely to be so durable.

Both of these may with great propriety be denominated "*sanitary paints*," and they are, I believe, superior (at least, with regard to cheapness) to those of Mr. Moreton, of that name: the *first* I myself prefer, as the other is more trouble, and requires delicate manipulation. The only rule necessary for *Lacboracic* painting is, *give the paint a stir every time you put your brush into it*.

I should have mentioned before that the residue of crystallized borax and undissolved shell-lac left in the straining-bag, if boiled again in a small quantity of water, may be treated and made use of in the same way as the former solution.

I have been strongly advised to patent these original processes; but having already an invention more in accordance with the spirit of the times, viz. my "Volcanic Shell," now before the Ordnance, for the benefit of the Russians, and being of the "no monopoly" school, I deem it better to present them to the *Builder* as an earnest of my good will.

In a late impression of your journal I see "Chemicus" says that he will "solve the mystery," &c. "but without soap." In my opinion, he has done your quick penetration of the previous week great injustice, for your remark is verified—it *is* soap. I conclude that it does not much matter whether *soap* is added ready made, or whether it is manufactured with the paint. "Chemicus" (?) does not appear to be aware that when a fixed oil, or fat, and an alkali, alkaline earth, or even *heavy metallic oxide*, come in contact, with at the same time a slight elevation of temperature, they combine to form *soap* in the two first cases, and in the third, what are generally called "plasters:" consequently, "Chemicus's" composition contains no soap—till he makes it! The lime-soap contained in it is a mixture of (allow me to inform him) stearate of lime, margarate of lime, and oleate of lime—the lime-salts of three fatty acids, in fact,—a perfect *soap*. Why, even if the tallow candle from the forehead of a miner, and the lump of *clay* into which it is stuck, were boiled together, a true soap would result, —an alumina-soap. I hope you will do yourself justice on this point, by administering a "*lathering*" to the gentleman whose signature appears to be of such doubtful propriety.

Wentworth L. Scott.

Clay colours are *the* best for the *Lacboracic Paint*.

* Or "*White Zinc*," or any other good "*white*," in an equivalent quantity.

STAINED GLASS.

Lincoln Cathedral.—The scaffolding was removed from the new stained-glass window at the east end of this cathedral on Thursday in last week, and it was at once exposed to view. The mosaic work, executed by Mr. Pickett, in 1762, having been considered not to be in accordance with the architectural character or elaborate richness of the choir, a subscription was raised for the purpose of replacing it by a more suitable design, and a committee appointed to effect this object. The nature of the stonework, the character of the principal remains of painted glass in the cathedral, and the limited sum at their disposal, imposed on the committee the necessity of following the precedent supplied by those designs of the thirteenth century, which consist of an assemblage of small pictures in panels, symmetrically arranged on an ornamental ground. And it having appeared that a design setting forth the scheme of Human Redemption would be most appropriate to the conspicuous situation of an east window, the present design, after much consideration, was adopted. The groundwork, as it were, consists of an ornamental design, the principal features of which are represented in various colours on a white ground, and which serves as a setting to the medallion pictures embedded in it. These medallions occupy the centres of the principal tracery lights, and are arranged in the lower lights in a peculiar order, twenty-eight circular panels being placed in the form of a cross, up the centre, and across the window, whilst twenty others, of equal size, but of different shape, form a kind of square about the cross, the spaces between the square and the cross being occupied by sixteen smaller panels. In the panels composing the square are represented the Fall of Man and its result, the Expulsion of our First Parents from Paradise, as well as those early and significant types of the Great Sacrifice, Cain and Abel's Offering, Noah and Job's Sacrifice, and the Offering of Isaac by Abraham. Then comes the Jewish Dispensation, shown by the delivery of the law to Moses, and the sacrifices appointed under it, the Paschal Lamb, and the setting free of the Scape Goat, &c. The representation of this last type occupies six medallions. Other types are introduced, indicative of our Lord's death and its spiritual effects, as the lifting up of the Brazen Serpant, Jonah and the Whale, Moses striking the Rock, the Gathering of Manna, the Passage of the Red Sea, and Entry into

the Promised Land. In the panels composing the Cross are represented scenes from our Saviour's life, illustrative of His Divine Mission. In the lower limb of the Cross are the Annunciation, the Adoration of the Magi, the Baptism of Christ, His Temptation, Transfiguration, and Triumphal Entry; and in and about the centre are,—the Last Supper, the Agony in the Garden, the Scourging, the Arraignments before Caiphas, Herod, and Pilate, the Crucifixion, and the Entombment. The Resurrection and Ascension are placed above the Cross, in the two principal tracery lights of the window. The Cross, however, contains, besides, the Marriage in Cana, Healing the Sick of Palsy, Healing the Lunatic Child, Raising Lazarus, the Widow's Son, and Jairus' Daughter, Healing the Blind, the Ten Lepers, the Angel appearing to the Marys, the appearing to Mary Magdalene, to the Disciples at Emmaus, to St. Peter, and to St. Thomas. In the smaller panels are represented the Sixteen Prophets, the harbingers of Christ. The emblems of the Evangelists are introduced in the smaller tracery lights, in additional allusion to the Christian Dispensation. In the centre of the large circle crowning the window is represented our Lord in Glory, surrounded by angels. Thus, the doctrine of the Atonement is set forth in one view. Messrs. Ward and Hughes were the artists employed. The groups are executed on the principle of bas-relief, the figures being cut out and insulated by the ground of the panel, and rendered rotund and distinct by strong shadows.

Gloucester Cathedral.—A memorial to the late Dr. Thomas Evans, head master of the Cathedral School, has just been completed in the Cloisters. It consists of a painted glass window, with brass plates, let into the stonework underneath, on which are inscriptions. The window forms part of a scheme, originated by the Rev. Dr. Jeune, for the restoration of the Cloisters, one object of which is for the future to avoid defacing the Cathedral by unsightly monuments, such as have hitherto been fixed to the walls, and whilst affording every assistance to those who wish to erect memorials to their friends, to add to the decoration of the building and the restoration of the fabric itself. The proposal was,—to fill the whole of the Cloisters with painted glass, according to a plan decided on, which will form, when completed, a history of the Annunciation, Nativity, Crucifixion, and Resurrection of our Saviour, the whole divided into a series of subjects connected with the life of our Lord, any one of which may be selected by the parties erecting a memorial window, but for obvious reasons, the compartment to which a certain subject is assigned cannot be altered. The stonework of the window to be restored by those putting up the memorial, the chapter in such cases dispensing with the fees. It is found that the whole cost of each compartment will not exceed 200*l.* including restoration of stonework, painted glass, and brasses, a sum, as the local *Chronicle* remarks, not much more than the fees alone for the erection of a tolerable monument in the Cathedral. The painted glass and brasses, forming the memorial of Dr. Evans, are the work of Messrs. Hardman, of Birmingham. The glass represents in the eight upper lights of the window the journey of the Holy Family, Joseph and Mary seeking for Jesus, and finding Him in the Temple. The lower lights being too close to the eye for figures, are filled with flowered quarries and an enriched border. The brasses are inscribed with black letters, with illuminated capitals and scrolls. Other windows are contemplated in continuation of the series. To further decorate the Cloisters, we may here observe, the chapter have decided on allowing brasses and encaustic tiles to be laid on the floor, dispensing in this case also with the usual fees. The expense of encaustic tiles for one compartment, it is said, will not exceed 20*l.*: the cost of brasses will, of course, depend on the amount of work in them, ranging, it appears, from 10*l.* upwards. Five of the compartments immediately adjoining the Deanery, have been lately restored by the dean.

Doncaster Parish Church.—A memorial in stained glass is to be placed, by Mrs. Saunders, in the window of the west end facing the south aisle in the parish church of Doncaster, now building. The artist employed is Mr. J. B. Capronnière, of Brussels, who designed some works of art for the Brussels Cathedral.

Gateshead Parish Church.—The Fire memorial window, by Mr. Wailes, has been erected in the chancel of St. Mary's Church, Gateshead, which was to be re-opened on Sunday last. The window has five lights. The centre light is occupied by a figure of our Saviour. On His right are the evangelists Matthew and Mark; and on His left, Luke and John. The three larger medallions in the tracery are devoted to the Baptism, the Last Supper, and the Resurrection. In the two smaller medallions are inserted the royal arms and the arms of Gateshead. At the foot of the window, under the principal figures, are angels bearing scrolls, and a representation of the falling of the tower of Siloam, together with the inscription commemorating the late fire and explosion, which destroyed so much of Gateshead and Newcastle. It is expected, according to the local *Observer*, that other two memorial windows will shortly be placed in the chancel.

PROCEEDINGS UNDER THE METROPOLITAN BUILDINGS ACT, 7 & 8 VICT. c. 84.

On the 14th September, the district surveyor of Bermondsey summoned Mr. George Hodges, mason and builder, before Mr. Coombe, the magistrate, at the Southwark Police Court, for having built a one-story building with the external walls 4½ inches in thickness, instead of 8½ inches, as required by the Act; for having built a flue of less internal diameter than 8½ inches, and with the fronts thereof 3 inches in thickness instead of 4 inches; and for having placed certain wooden rafters within 3 inches of the face of such flue, where the substance of the brickwork is less than 8½ inches thick, it being only 3 inches thick as before mentioned. The district surveyor produced the certificate of the official referees, and proved the works to be contrary to the Act in all the particulars before mentioned. The magistrate thereupon ordered Hodges to enter into his own recognizances for abating and taking down the building, and paying 3*l.* 17*s.* 5*d.* costs.

Hodges subsequently pulled down the building, but failed to pay the costs. The magistrate, on the 24th of September, issued his warrant to levy the amount of the recognizance (25*l.*) by distress; and inasmuch as the defendant alleged that there was not sufficient to distrain upon, he was committed till the distress should have been levied.

THE WESTFIELD GALLERY, NEAR RYDE.

Sir Augustus Clifford has lately added a gallery to his marine residence at Westfield, Isle of Wight, overlooking a lawn studded with specimens of sculpture, with a background of luxuriant foliage. The interior is finished with Corinthian pilasters, supporting an enriched cornice, from which springs a segmental ceiling, divided into compartments (corresponding with the divisions formed by the pilasters), and these are again subdivided by coffered panels, supporting a skylight, through which the principal light to the gallery is admitted. The glass in the skylight is of ornamental design, and emblematical of art, literature, and music. The room has a semicircular tribune, with the Apollo Belvidere at the south end, over which is a medallion of Sir Augustus, executed by Mr. Grey, sculptor, of Ryde. The walls are hung with a deep blue paper, diapered with black, divided, by large gold moulding of the cable pattern, into panels, with stiles formed of a gold-coloured paper. The paper is continued round the whole of the tribune, and in the anteroom. The ceiling is in grey and white, relieved by gilding.

The designs were by Mr. Thomas Hellyer, architect, of Ryde, and the building was executed by Messrs. Dashwood, of Ryde.

RAILWAY MATTERS.

The New Central Station at Leeds.—The works for the new station at the Leeds termini of the Great Northern, Lancashire and Yorkshire, and Leeds, Bradford, and Halifax Junction Railways, Wellington-street, Leeds, have been let. The building is to front to the south-east, in a line with the Whitehall-road. The style of architecture of the façade is mixed, the Grecian predominating. The length of frontage will be 243 feet 9 inches, exclusive of a station-master's house at the south end; and its height 20 feet. The main entrance, which will open into a booking-office, 30 feet 6 inches by 22 feet 9 inches, will project from the line of the building 1 foot 6 inches, and the extremities, surmounted by pediments, 9 inches. The frontage is to be constructed of red brick, with stone facings, and rustic pilasters at the entrance and extremities. The interior station will be about 500 feet long, and 137 feet wide, covered in by two spans of iron and glass roofing, supported on metal columns. There will be three platforms, each 130 yards long and 20 feet wide, and six lines of rails. The foot approach from without will be by flights of steps from Wellington-street, and the carriage approach to the main entrance by an incline. The works which are now in progress have been let to Messrs. Kirk and Parry, of Sleaford, Lincolnshire; and the cost is to be about 20,000*l.*

Viaducts.—The viaduct near Wellingborough, in connection with the Hitchin and Leicester Railway, has given way, in consequence of which three of the principal arches will have to be taken down.——The foundation-stone of the great Rhymney Viaduct has been laid, and the whole will occupy one year in completion. It is to be 750 feet in length, and will span the valley at a height of 120 feet. The whole is to consist of sixteen arches, each 45 feet in span, and to be built of stone and brick, to carry a double line of railway. This undertaking is designed to take the Taff Vale Extension Railway over the Rhymney Valley to a junction with the line now in course of construction from Rhymney to Cardiff. Mr. C. Liddell is chief engineer.——The last girder of the majestic Crumlin viaduct on the Taff Vale Extension of the Hereford, Abergavenny, and Newport Railway, was successfully raised on Saturday amid the rejoicings of the public and the workpeople. Shortly after the girder was fixed a procession was formed, which marched through the village, ascended the Kendon Mountain, then moved on to the viaduct, and on the centre gave three cheers for Mr. Kennard, the contractor, who, with his wife and brothers, was present, three cheers for Mrs. Kennard, and three for their young family.

Traffic Returns.—The returns of railway traffic in the United Kingdom, for the week ending September 15, amounted to 435,154*l.* and for the corresponding week of 1854, to 393,456*l.*; showing an increase of 41,698*l.* The gross receipts of the eight railways having their termini in the metropolis amounted for the week ending as above to 195,211*l.* and for the corresponding week of last year to 172,962*l.*; showing an increase of 22,249*l.* The increase on the Eastern Counties Railway amounted to 1,056*l.*; on the Great Northern, to 2,004*l.*; on the Great Western, to 4,878*l.*; on the London and North-Western, to 5,036*l.*; on the London, Brighton, and South Coast, to 1,723*l.*; on the London and South-Western, to 2,575*l.*; and on the South-Eastern, to 5,081*l.*: total, 22,353*l.*, from which must be deducted 104*l.* decrease on the London and Blackwall, leaving the increase, as above, 22,249*l.*

THE SUPPLY OF "QUANTITIES" BY ARCHITECTS.

Permit us to submit a query, which, as opposite opinions prevail upon it in the provinces, should be settled.

What is the practice usually adopted by the profession concerning scheduled quantities of works about to be tendered for?

We arranged with a committee of proprietors to prepare all necessary plans and specifications, &c. and to superintend the works for a number of dwellings for a fixed amount. In doing this, can we, without consulting them, cause the quantities to be got out, inserting in them a per-centage for such trouble? We apprehend we may. And when the tenders are received, have the committee any right to interfere with such per-centage, if reasonable?

In short, can we, at our option, cause quantities to be got out, and receive remuneration for it without consulting the proprietors? SUB.

*** A considerable question is involved here, on which, before making any observations, we shall be glad to receive expressions of opinion.

A LEADING THOROUGHFARE.

Your labours to bring about improvements in London have done much good, and as an old resident, I beg leave to thank you for the past, and at the same time to express my hopes that your exertions for the future will be equally successful.

I have witnessed all the improvements during the last forty years, and one of the greatest has been the opening of New Oxford-street, which has contributed so much to facilitate the intercourse of the West-end with the City. I wish to propose a similar opening of another new street, which will cost but little, comparatively speaking.

Take the map of London, and follow the line of Piccadilly, from Hyde-park-corner to its termination in Lincoln's-inn-fields, as the square is called. You will then speedily see how little it would cost to open a way into Holborn. Follow the line still in Holborn for a short distance until you come to Gray's-inn-lane. Trace the line still onward, by Greville-street and Charles-street to the north of Furnival's-inn, and pursue the course across the now vacant hollow, called Victoria-street, until by a straight line you enter West-street, and so into Smithfield. Smithfield being no longer a cattle-market, may be rendered available as a means of safe communication with Finsbury and the adjoining districts, through the several streets leading to Finsbury-square, Finsbury-circus, &c.

It will be necessary to build a viaduct over Victoria-street, which at this moment appears to invite the proposed improvement.

The cost of this line of new street cannot be much, whereas the advantages it will afford to the inhabitants of this metropolis are above calculation. It will lessen the dangers of the crowded vehicles in Cheapside, Newgate-street, Ludgate-hill, Fleet-street, and the Strand, and it will save the poor horses while dragging heavily-laden omnibuses from many falls on Ludgate-hill, and above all, on Holborn and Snow hills.

ENNA.

SHORTENING SPOFFORTH CHURCH.

ON Tuesday, the 18th, Spofforth Church, near Wetherby, Yorkshire, was reopened by the bishop of the diocese, after undergoing a restoration. The architectural merits of the present structure I will leave for others to criticise; but there is one thing connected with it which I cannot pass by quietly. I refer to the shortening of the chancel by one-third, which has unfortunately been done by the rector, and by which I feel sure that the promoters of the scheme have lost more subscriptions than they have any idea of. But how comes it that this plan was allowed? For it could not be done without the sanction of the Ecclesiastical Court. Therefore, application was made, during last year, for leave; and, as no one interested himself sufficiently in the welfare of the church to oppose it, after postponement of their decision for some six weeks, with much perseverance against many difficulties on the part of the applicants, leave was at length reluctantly given, and one of the finest chancels about deliberately spoiled. But what is the good of the Yorkshire Architectural Society, if its members cannot keep an eye on the old architectural beauties of that land of abbeys and churches they are proud to call themselves after? They may say that it was not their place to interfere,—but the question is, whose is it? and, surely those lovers of architecture who have joined themselves into a society are more likely to be able to bear the expense of law in an architectural cause than any private individual; and the opposition would have much greater weight from a body of so high a standing. Now, however, it is done, and too late to find fault as far as Spofforth is concerned; but may its fate awaken the slumbering lovers of architecture to a stricter vigilance over those works of our ancestors they profess to take a pride in.

M. R. F.

AMERICAN PATENTS.

THE following, amongst many other, claims of patent right, recently made in the United States, are quoted from the *Journal of the Franklin Institute of Pennsylvania*:—

For an improvement in the manufacture of artificial stone; Thomas Hodgson, Brooklyn, New York, assignor to Robert L. Wright, city of New York; patented in England, May 9, 1854. Claim: the composition formed by the admixture of sand or pulverized stone, plaster of Paris, and beasts' blood, when mixed in the manner and in about the proportions to be moulded or cast, while in a plastic state, into blocks, architectural ornaments or devices, statuary, or ornamental or other forms or figures, and in such conditions used as a substitute for stone, for building, architectural, or other ornamental purposes.

For an improvement in plank roofs for building; Samuel Taylor, Petersham, Massachusetts. Claim: making each of the boards of a saddle form, in order that when laid together their contiguous plane surfaces may not only be in close contact, but be so inclined as to prevent water from remaining between them and causing or promoting their decay. Also, the improvement of providing each of the grooves of the upper boards with an inverted metallic or water-tight lining or trough.

For an improvement in wrought-iron beams and girders; Anthony Pollak, Philadelphia, Pennsylvania. Claim: the combination in wrought or malleable iron beams or girders of top and bottom T pieces, with flat or plane surfaced longitudinal plates riveted upon both sides of the stems or vertical portions thereof.

For an improvement in scaffolds; Abram C. Funston, Philadelphia, Pa. Claim: making the back upright of one or all of the sections or frames forming this particular scaffold in two parts, and providing the lower part with a slot, and uniting it to the upper part by a set screw, which plays in the slot, and allows of the lower part being raised.

For an improved arrangement of drains for sewers; P. J. Coogan, Charleston, S.C. Claim: the employment of siphons placed within a box or receiver, whereby the sewer or channel which extends from the box or receiver to the main sewer, is prevented from being choked or stopped with sediment or impurities, and all unpleasant and unwholesome effluvia arising therefrom, avoided. Also, the box or receiver provided with siphons. [This is either an authorised appropriation of an Irish invention, or an unauthorised appropriation of it. Coogan calls it his invention, which it is not.]

For a machine for cutting cavities, spherical, ellipsoidal, &c.; Isaac B. Hartwell, Woodstock, Vermont. Claim: 1st, the spherical shell or cutter turning at the same time on the axis of the sphere of which the shell is a part, so as to cut a spherical groove or a convex and concave surface of less extent than a quadrant of the superficies of a sphere, yet corresponding in shape to the convex surface of a spherical section formed by two planes passing through the sphere at right angles. 2nd, the method of giving a compound motion to the spherical shell or cutter, by means of the tight gear wheel and the loose gear wheel revolving on the axis of the rocking-frame, so as to be in connexion with the pinion in all necessary positions of the rocking-frame. 3rd, the use of circular saws set in an oblique sliding-frame, in connexion with the spherical cutter, for the purpose of cutting straight grooves to connect with the spherical grooves at each end of the block of wood.

Miscellanea.

IRON STILL SUPERSEDING WOODWORK IN NAVAL ARCHITECTURE.—Some novelties are observable in the fitting out of the Australian Black Ball ship *Schomberg*, says the *Liverpool Times*. Her 'tween decks are fitted up with iron berths throughout. Her iron tanks are fit to carry either water or provisions, and, while able to bear any weight upon them, act as permanent ballast. The foreyard of the vessel is a hollow iron tube, made of quarter-inch plates. It is 96 feet in length, 23 inches circumference at the slings; greatest circumference, 6¼ feet. It weighs 4 tons—a wooden spar same size would weigh 8½ tons. The first cost is a little more than wood. Messrs. Baines and Co. for whom this iron foreyard was made by Messrs. Wainwright, intend, according to the *Liverpool Journal*, to spar every ship they own with tubular iron spars

APPARATUS FOR RAISING SUNKEN VESSELS.—An exhibition has been made by Mr. Samuel Rainbird, in Great Yarmouth, of a working model of valuable apparatus for raising sunken vessels, which has just been perfected by Mr. Rainbird, and is now patented by him, in the hope that he may be enabled to bring out his invention. The experiments are said to have been satisfactory.

ALLEGED JOBBERY IN IRELAND. — The Irish Board of Works are charged by the *Cork Examiner* with a long string of blunders and jobbery, especially in regard to the contract for a new Lunatic Asylum for Cork. The governors had consented to an expenditure of 50,000*l.* proposed by the Government authorities as the requisite cost. The Board of Works thereupon took the matter in hand, and entered into contracts which at present amount, it is said, to 85,8-8*l.* odds, besides 2,000*l.* additional expended in preventing the rain from coming in on the heads of the governors in torrents, and in removing dry rot from the joists and flooring. As for the ventilation, it is declared to be a dead failure, the water supply and drainage defective, pumps choked, patients' recreative-yards facing the north, and these but a specimen of "a shameful catalogue of blunders," an "unhappy site" inclusive.

WHITECHAPEL WORKHOUSE COMPETITION.—In a late number there was an advertisement, "To Architects," for an offer to compete for making plans, &c. for the guardians of the above workhouse, thereby putting the profession to a sort of public auction, so as not to pay according to the professional usage, but at the lowest price. I do hope that you will be enabled to shame every professional gentleman claiming respectability from making any offer. Allow me to add, I applied to the clerk of the said guardians for information, but he refused to answer a written communication.—ALPHA.

MINING COLLEGE FOR NEWCASTLE-UPON-TYNE.—It is proposed to erect a building for a Scientific and Practical Mining College at Newcastle-upon-Tyne. Plans have been executed by Mr. A. M. Dunn, of Newcastle, architect, and prospectuses issued in accordance with views brought under the notice of coalowners in all parts of the kingdom by the president of the Northern Institute

STATUE OF AN ARCHÆOLOGIST.—A colossal statue of the celebrated archæologist, Count Carlo Castiglione, has just been inaugurated in the court of the Palazzo Brera, at Milan.

THE SHORT TIME QUESTION.—I shall be glad to know if there is any stated time that a man should work *during the week, to entitle him to the 1½ hour on Saturday*. It appears to me that when the four o'clock system was adopted, this question was never settled.—H. C. W.

*** The custom is to pay the full time, even if men come to work on the Saturday.

PARISIAN BUILDING TENDERS.—On the 3rd of next month tenders will be received at the Hôtel de Ville, for the construction, on the Place de l'Hôtel, of a building destined to receive the Caisse de Poissy. The plans of this building, the cost of which is estimated at 627,043f. are by M. Baltard, the city architect.—*Galignani*.

SALE OF A PARISH.—The whole of the parish of Exbury, in Hampshire, is to be sold. It belongs to the Mitford family. The parish consists of 2,400 acres, a mansion-house, half-a-dozen farms, two public-houses, a village, and about fifty cottages. It is bounded by the New Forest, Beaulieu River, and the Solent Sea.

BRIGHTON AND SUSSEX SOCIETY OF ARTS.—After an interval of two years, Brighton again boasts a gallery of arts, composed, in the main, of the works of local contributors. The site of the exhibition is the kitchen of the Pavilion, which, lighted from the sky, is said to be well adapted for the display of paintings.

DISTILLATION OF COAL.—Messrs. Evans, of the Gas-works, Horseferry-road, have recently patented the coating of retorts internally with enamel or glaze, to prevent the gas from escaping through the pores of the material of which the retort is composed, and also, by presenting a smooth surface, to prevent the carbon from adhering. The patentees further claim the glazing of the surfaces of iron or metal retorts, and the application of such retorts to the manufacture of gas for illumination, or to the distillation of coal or other resinous substances.

TENDERS

For rebuilding the Jews' Hospital, with outbuilding, Mile-end-road. Messrs. Tillett and Chamberlain, architects. Quantities supplied:—

Brass and Son	£13,873	0	0
Ashby and Sons	13,488	0	0
Patrick and Son	13,350	0	0
Haynes and Eyre	13,199	0	0
Piper and Son	12,950	0	0
Myers	12,928	0	0
Rider	12,386	0	0
Holland	12,309	0	0
Brown and Co.	11,997	0	0
Hill (accepted)	11,864	0	0

For erecting new warehouses in New Bridge-street, Blackfriars, for Messrs. Spicer. Mr. Sydney Smirke, architect. Quantities supplied:—

Piper and Sons	£8,775	0	0
Haward and Nixon	8,764	0	0
Kelk	8,649	0	0
Lee and Son	8,473	0	0
Holland	8,097	0	0
Cubitt	7,975	0	0
Lucas, Brothers	7,728	0	0
Lawrence and Sons	7,440	0	0
Hubert (accepted)	7,022	0	0

For erecting a house and warehouse, No. 26, Cannon-street West, for Mr. William Edwards. Mr. Horace Jones, architect. Quantities supplied by Mr. Reddall,—

Gammon	£1,791	0	0
Willson	1,786	0	0
Mansfield and Son	1,777	0	0
Ashby and Sons	1,693	0	0
Piper and Son	1,693	0	0
Ashby and Homer	1,687	0	0
Lawrence and Sons	1,674	0	0
Scott and Cornwall	1,672	0	0

For the City Bank, Threadneedle-street. Messrs. W. and A. Moseley, architects. Quantities supplied:—

	Building.	Add if Stone Front.
Haward and Nixon	£22,487	£780
Piper	21,879	1,000
Jay	21,700	938
Cubitt	21,418	983
Lawrence	20,456	908
Kelk	19,977	1,179
Heath	19,970	779
Lucas, Brothers	19,902	880
Myers	19,585	762
Ashby and Son	18,890	914

For villa and stables, Callow-hill, Virginia Water, for Mr. W. Mortimore. Mr. T. C. Clarke, architect:—

	House.	Stables	Total.
Wyatt	£4,140	840	£4,980
Ashby and Sons	3,574	690	4,264
Loe and Sons	3,578	658	4,236
Browne and Co.	3,460	678	4,138
Gammon	3,425	695	4,120
Lawrence and Sons	3,337	650	3,987
Mills	3,217	649	3,866
Oades and Son	3,185	628	3,783

TO JOINERS.

A FEW good JOINERS can have EMPLOYMENT by applying to Messrs. FOORD and SONS, Acorn Wharf, Rochester, Kent.

AN Architect requires a CLERK of WORKS, who'ly (or two or three days a week) for a month, and afterwards once a week for three or four months.—Address (stating terms and giving references) A. B. 28, Oxford-street.

TO PAINTERS, GRAINERS, &c.

WANTED, a steady Man in the above line, that understands writing. Apply, personally or by letter, post paid, to Mr. PARSEY, Painter, &c. Sydenham, Kent, stating wages and reference.

N.B. Some good Painters Wanted

PUPIL and IMPROVER.—An Architect and Engineer holding a public appointment in the south of England, has a VACANCY for an ARTICLED PUPIL; also for a Young Man, having some knowledge of the profession, but desiring improvement. – Address, ZETA, 12, Albert-terrace, Barnsbury road, Islington

TOWN OF CARDIFF.

SURVEYOR WANTED.—The Cardiff Local Board of Health will, on FRIDAY, the 19th of OCTOBER, 1855, proceed to the ELECTION of a SURVEYOR, who will be required to devote the whole of his time to the duties of his office. Salary, 250l per annum. The appointment to be annual.—Applications and testimonials to be sent in to me, on or before THURSDAY, the 18th of OCTOBER.

T. WATKINS, Clerk.

Cardiff Local Board of Health September 21st, 1855

WANTED, an active and intelligent Person, to COLLECT ORDERS for a house of note connected with the Building Trade. He must be a gentlemanlike in his address, and produce unexceptionable testimonials. A liberal salary will be given.—Address, J. B. Post-office, Pimlico.

WANTED, immediately, an efficient CLERK of DRAINAGE WORKS. Apply to Mr. EDWARD GIBBS, Engineer, Stratford-upon-Avon.

TO BUILDERS' ASSISTANTS AND DRAUGHTSMEN.

WANTED, by a Builder, a steady, respectable Person, not less than 30 years of age, to ASSIST in the OFFICE DUTIES, in preparing plans, specifications, estimates, bookkeeping, &c. and to be practically acquainted with joiners' work. He would be expected to see to the carrying out of staircase work and the construction of the different branches of the business. Not need apply unless fully competent to carry out these requirements, and can give satisfactory reference as to honesty, sobriety, and ability. Applications to be made addressed to Mr. STAINTON, Surveyor and Builder, Boston, Lincolnshire, stating salary required with age and particulars.

TO FOREMEN OF BRICKLAYERS

WANTED, a thoroughly-experienced, active, middle-aged man, as WORKING FOREMAN.—Address, stating age, particulars, salary required, and where last engaged, to A. C. Office of "The Builder."

WANTED, in an Architect and Surveyor's Office, a YOUTH, who can write a good hand, is quick at accounts and has a taste for drawing. No salary for the first few months.—Address, in own handwriting, to A. B. Steven's Newspaper-office, 25, Threadneedle-street.

TO BUILDERS AND CONTRACTORS.

WANTED, by a Gentleman of great experience and of thorough business habits, an APPOINTMENT as MANAGER to a builder or contractor, with a view to a partnership or otherwise. Has held several appointments with first-rate firms, and is fully competent to take the measure, and superintend works. Would have no objection to the management of an extensive contract.—Address, X. P. care of Messrs. Street, Brothers, Sloane-street, London-fields, London.

TO BUILDERS, CARPENTERS, &c.

WANTED, by an experienced Man, a RE-ENGAGEMENT as FOREMAN of Carpenters and Joiners, in Town or Country, or to superintend for a gentleman.—Address, prepaid, to S. M. Office of "The Builder."

TO BUILDERS, &c.

WANTED, by a persevering Young Man, aged 23, a SITUATION, where he will be employed sometimes out-doors. He can prepare finished and working drawings, write specifications, take out quantities, measure work, keep builders' books, make out the accounts, and work as a carpenter. Writes a fair hand, and well understands the routine of a builder's office. He was in a late situation in a provincial town six years, where he can have good references.—Address, J. E. ORMES, Brightlingsea, Essex.

TO ENGINEERS AND CONTRACTORS OF GAS AND WATER-WORKS.

WANTED, by the Advertiser, a SITUATION as FOREMAN or INSPECTOR of PIPE LAYERS, or Works in general connected with gas and water supply. Unexceptionable references can be given. Will have no objection to go abroad.—Address, M. R. 4, Abbott, Barton, and Co.'s, 9, Upper Wellington-street, Strand

TO MASTERS OF FACTORIES.

WANTED, by the Advertiser, a SITUATION as ENGINE-DRIVER or ENGINE-DRIVER and STOKER. The advertiser is well acquainted with steam engines and machinery in general, and would be willing to make himself generally useful to his employers. Can give nineteen years' good reference.—Address, pre-paid, to J. B. No. 6, Cottage-place, Hornsey-street, Westminster.

TO BUILDERS AND OTHERS.

WANTED, a RE-ENGAGEMENT, by a BUILDER'S ACCOUNTANT, experienced in getting out the accounts of the Trades various departments, and pricing for prime cost charge or estimates. No objection to the country for temporary services.—Address, A. Z. Mr. Blube's, Newspaper Agent, Hope Town, Wandsworth-road, Surrey.

TO MASONS, BUILDERS, &c.

WANTED, a SITUATION, as WORKING FOREMAN or YARD MANAGER, by a steady, active, and experienced Mason, aged 42. Is a good accountant, and can prepare working and finished drawings. First-rate references.—Address, prepaid, R. B. W. No. 20, Coulson-street, King's-road, Chelsea.

TO BUILDERS AND OTHERS.

WANTED, by an industrious man, aged 34, a SITUATION as FOREMAN, or to manage a business, as Plumber, Painter, Glazier, &c. Has had good experience in similar situations. Is a good plumber, lead or sash glazier, painter, &c.; in short, he has a thorough practical knowledge of every branch connected with the business. Can measure or estimate for work, and would have no objection to make himself useful, or would go to any part of the United Kingdom. Unexceptionable references given.—Address, H. T. No. 7, Riley-street, King's-road West, Chelsea, London.

TO MANUFACTURERS, CONTRACTORS, &c.

WANTED, by a competent person, a SITUATION as TIMEKEEPER.—Address, B. Office of "The Builder."

WANTED, by a respectable middle-aged Person, an ENGAGEMENT as CLERK, being qualified to take any department in the counting house, conduct the correspondence, &c. at a moderate salary.—Address, Z. Office of "The Builder."

TO BUILDERS, STONE MERCHANTS, AND CONTRACTORS.

WILLIAM CHIPP, the man who superintended the quarrying, carting, and chipping of the stone for the New Houses of Parliament, from the year 1840 to 1854, is desirous of obtaining an ENGAGEMENT in the quarrying of stone, or in the stone trade. Has no objection to be employed in any part of England or Ireland. Unexceptionable references can be given as to character and ability.—Address by letter, post-paid, to WILLIAM CHIPP, Post-office, Frimley, Surrey.

AS OUT-DOOR OR GENERAL FOREMAN, OR CLERK OF WORKS

WANTED, a SITUATION as above, by the Advertiser, who is thoroughly competent, and can produce good testimonials and references from previous engagements. Address, S. M. 13, Ad lington street, York-road, Lambeth.

WANTED, a SITUATION as FOREMAN of Carpenters, by an active steady Man, capable of superintending any kind of building or railway works. Has just completed an outfit with a Lo don firm, from whom he can be well recommended. No objection to any part of the country, or to go abroad.—Address, A. B. 14, Montpelier-place, Brompton.

TO PLUMBERS.

WANTED, a SITUATION as PLUMBER. Will fill up his time at painting and glazing. Age, 23. Good reference.—Address, W. W. 9, Whitmore-street, Hoxton.

AS YARD OR OUTDOOR FOREMAN

WANTED, a SITUATION in the above capacity, by a person practically acquainted with carpenters' joiners', and every branch of the building trade. Can have ample testimonials if required. No objection to the country.—Address, L. D Office of "The Builder."

TO ARCHITECTS AND SURVEYORS.

WANTED, by a respectable young Man of business habits, a SITUATION in the above capacity. Is a good draughtsman, understands the general principles of surveying, and is thoroughly competent to the routine of an architect's office. Unexceptionable references can be given, and a moderate salary only is required.—Address, DELTA, care of Mr MacNeish, 28, Princes-terrace, Caledonian road

TO ARCHITECTS AND SURVEYORS

WANTED, an ENGAGEMENT, by an ASSISTANT, who has just completed his articles. A permanent and improving one is the principal object.—Address, L. A. M Johnston's Post office, Blackfriars-road.

TO BUILDERS AND PLUMBERS.

WANTED, by a respectable Young Man, a SITUATION as a good PLUMBER, and will fill up his time in painting, if required. Good references can be given.—Address, post-paid, to J. U 48, East street, Marylebone, London.

TOWN of LEEK.—To SURVEYORS.—Notice is hereby given, that a SURVEYOR is WANTED for the town of Leek. Candidates for the appointment may forward testimonials of qualification and competency, addressed to the Clerk to the Commissioners, Leek, before SATURDAY, the 6th of OCTOBER next. Candidates must be familiar with the practice of engineering in connection with works of water supply, drainage, sewerage, and surface cleansing, competent to conduct surveys, prepare plans, drawings, and estimates of works of every description, and able to superintend the execution thereof. Candidates are not requested to attend personally unless specially summoned, but to state the salary required.

TO ARCHITECTS.

THE Advertiser is desirous of an ENGAGEMENT as ASSISTANT. Is accustomed to prepare fair, detail, and working drawings in Italian and Gothic, superintend works, take out quantities &c. Satisfactory references.—Address, R. L. Mr. Newman's, 121, Tooley-street, Southwark.

TO STONEMASONS.

THE Advertiser, the son of a Master Mason, requires EMPLOYMENT in Town or Country, as Letter-cutter and Writer, in Stone, Marble, or Granite. Has six years' experience. Is competent to manage a small or branch business. Good references can be given.—Address, B. B. Post-office, Victoria-road, Brighton, Sussex.

TO CIVIL ENGINEERS AND SURVEYORS.

THE Advertiser, a Young Man, having just been engaged on an extensive town survey for the Local Board of Health, where he has been mostly occupied as draughtsman, is desirous of meeting with a similar ENGAGEMENT. Has a good knowledge of surveying and levelling. Salary moderate.—Address, F. F. No 2, Nelson-terrace, Great Yarmouth.

TO BUILDERS, CONTRACTORS, AND OTHERS.

THE Advertiser, a Young Man, about 20 years of age, is desirous of an ENGAGEMENT, as TIMEKEEPER, OVERLOOKER, or CLERK, in a Builder's Office. No objection to fill up time at the bench. Has been two years in a Builder's Office, and a short period at the bench. Good references if required.—Address, stating salary, &c. R. F. Post-office, Reading.

TO SURVEYORS, BUILDERS, AND DECORATORS.

THE Advertiser, aged 26, a neat Draughtsman, having completed a twelvemonth's engagement in the superintending of the erection of several first-class houses, and thoroughly conversant with the routine of either of the above offices, is desirous of a RE-ENGAGEMENT as OFFICE CLERK, or to take charge of works.—Address, C. J. 5, King's-road, Brighton.

TO LAND-AGENTS AND AUCTIONEERS

THE Parents of a steady Youth wish to place him, for FOUR YEARS, as IN-DOOR PUPIL, where he will be treated as one of the family, and have a thorough opportunity of learning practically the different branches of the profession. A moderate premium will be given, and the country preferred.—Letters, with terms and real name and address to H. H. at Mr. Hayles, Post-office, Ealing. If suitable, will be replied to

TO BUILDERS AND OTHERS.

THE Advertiser, a practical Mason, is desirous of TAKING or CONTRACTING for the STONEWORK of any building, at the lowest possible price, and the brickwork, if required.—Address, W. W. Mr Taylor's, No. 173, Waterloo-road, Lambeth.

TO BUILDERS.

CLERKSHIP.—WANTED, by a Young Man in his 21st year, of active business and persevering habits, a SITUATION in a BUILDER'S OFFICE. Writes a good hand, quick at figures, and is thoroughly acquainted with the usual routine of the office.—Address, E. G. L. care of Mr. Davidson, News Agent, 26, Featherstone-street, City-road

TO BUILDERS AND CONTRACTORS.

A SURVEYOR of experience offers his services in Taking out Quantities, Measuring Works, Making up Estimates, Preparing Drawings, Specifications, &c. upon moderate terms.—Address, SURVEYOR, 12, Augusta-place, Lansdowne road Kennington.

TO BUILDERS AND DECORATORS.

A FIRST-CLASS GRAINER wishes to go into the County for a few weeks, and will undertake a JOB on reasonable terms. First rate references can be given. Address to F. HOWARD, 30, King street, Camberwell.

TO MASTER PLUMBERS AND BUILDERS.

A RESPECTABLE YOUNG MAN, aged 30, who is at present in business for himself, wishes to ENGAGE as FOREMAN, and is competent for undertaking and managing a first-rate business. Is a thorough good Plumber, Painter, and Glazier, and has a general knowledge of the Building Business. Address, A.B. 9, James-street, Notting-dale, Nottinghill.

TO CARPENTERS, &c.

A YOUNG MAN wants to bind himself for one or two years. Has been at the trade two years.—Address, A. B 29, Montpelier-row, Brompton.

TO FACTORY PROPRIETORS, PUBLIC COMPANIES, &c.

A SIGN-BOARD and GLASS-WRITER wishes to EXCHANGE his WEST-END MISCELLANEOUS PRACTICE, and take the WORK of a SINGLE ESTABLISHMENT. No objection to superintend the painting, or to go into the country. Address, J. S. 12, Hollen-street, Soho-square.

TO ARCHITECTS, BUILDERS, &c

A GENTLEMAN wishing to fill up his time, would be happy to do so in making or colouring perspectives, preparing finished or working drawings, specifications, &c. Terms moderate. Address, J. T. Office of "The Builder."

A GENTLEMAN, possessing a small but safe connection with Builders and Housekeepers, is desirous of commissions on Timber and Deals, Builders' Ironmongery, Cements, &c. References of high character. Address, G. M. Pace's Coffee-house, Cambridge-heath Gate, Hackney road.

A FIRST-RATE PLAN and general DRAUGHTSMAN, ORNAMENTAL WRITER, &c is open to an ENGAGEMENT. Has been thirteen years an active manager. Expert in all reductions, enlargements, and making finished copies of township, Parliamentary, railway or estate plans, &c. Apply by letter to H. HAMLET, 15, Charing-cross.

TO BUILDERS AND DECORATORS.

A GOOD GRAINER, or to act as FOREMAN of PAINTERS, wants a SITUATION in town or country.—Address to A. B. 36, Eversholt-street, Oakley-square, Camden-town.

TO BUILDERS, &c.

A YOUNG MAN, of good practical experience, is in want of a SITUATION in an Office.—Address, C. P. 108, Drury-lane, London.

TO MERCHANTS AND OTHERS.

A PERSON, with extensive connection in the Building Trades, is open to receive a COMMISSION for the SALE of any articles in general use amongst builders.—Address, M. H. care of Mr. Ousey, 37, King-street, Cheapside.

TO SMITHS, GASFITTERS, BELLHANGERS, AND BUILDERS.

A RESPECTABLE YOUNG MAN, who thoroughly understands the whole of the above branches, would be glad to meet with a PERMANENT SITUATION.—Address, J. S. 41, Gilbert-street, Oxford-street, London.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR WILLIAM BARAND, BART. TO THE GUTTA PERCHA COMPANY.—Second Testimonial.—"March 10th, 1855. In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 50 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Bentham, Lancaster.

No. 1 quality, inches diameter and price per yard.

¼	⅜	½	⅝	¾	1	1¼	1½	2	2½	3 in.

Super-extra stout quality.

2	2½	2¾	3 inches.
2s.	2s. 3d.	2s. 6d.	2s. 9d. per yard.

No. 0. A cheaper hose, to beat a low pressure for gardens and agricultural purposes, at greatly reduced prices.

1	1½	2	2½ inches.
9d.	10d.	11d.	1s. 1s. 3d. 1s. 6d. per yard

The hose is Burnettized at an extra charge of 3d. per yard. Union Joints, Branch Pipes, and Jets, are also supplied.

CHAS. MACINTOSH and CO. Patentees of the VULCANIZED INDIA-RUBBER, and GENERAL MANUFACTURERS of WATERPROOF, AIRPROOF, and ELASTIC RUBBER GOODS beg to inform all persons who desire to correspond with them direct, that their SOLE ESTABLISHMENTS are No. 4, Cannon-street West, London, and Cambridge-street, Manchester. This notice is necessary, as the term Macintosh Depôt, Macintosh Warehouse, &c. is frequently adopted both in London and the country by vendors of India-rubber goods, who deal in articles not of the manufacture of CHAS. MACINTOSH and CO. — Goods manufactured by CHAS. MACINTOSH and CO. are stamped with the name of the firm.

LOOKER'S PATENT TUBULAR VENTILATOR is the CHEAPEST and most ORNAMENTAL yet introduced for effectually admitting pure air with a perceptible draught. Decorated to suit any building or apartment. Particulars and prices may be obtained, and specimens seen, at the Office of Mr. J. PATMAN, Architect, 4, Berners-street, London; or on application to BENJAMIN LOOKER, jun. Patentee, Kingston-on-Thames.

DRAINAGE of LAND.—WANTED, to undertake the DRAINAGE of LAND by CONTRACT, or to execute temporary Timber, or Iron Tubes to supply Drain-pipes at a reasonable price.—J. JOHNSON, Drainage Engineer and Contractor, Abundon-street, Westminster.

LAND DRAINAGE.—MR. THOMAS SCOTT, Land Agent and Valuer, 5 Charing-cross, London, is prepared to undertake the PLANNING and EXECUTION of LAND DRAINAGE, in large or small quantities, by contract or on commission. He has now at work several London-study and well-organized "gangs," under competent foremen and pipe-layers. Mr. SCOTT is at present carrying out extensive drainage works on Crown lands, which he will be happy to show to gentlemen desirous of seeing them. Communications addressed to him as above will be immediately attended to. September 28, 1855.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

This Paint possesses in an eminent degree the following advantages over all other known Pigments:—

INDESTRUCTIBILITY BY HEAT—PRESERVATION OF IRON FROM OXIDATION WOOD FROM DECAY, AND MASONRY AND BRICKWORK FROM DAMPNESS—PERMANENCE OF COLOUR AND FREEDOM FROM DELETERIOUS PROPERTIES—SUPERIORITY OF BODY.

The Protoxide Paint, as at present produced, is of one shade of colour, viz :—a pale drab, but it may be tinted with any other colour to suit the taste and purpose for which it may be required. It is not affected by sulphuretted or carburetted hydrogen gas, bilge water, or indeed foul air of any kind, and is therefore well adapted for the interior of ships, Warehouses, Offices, Stabling, &c.; and from its total freedom from deleterious properties, it will be found of great value for painting the interior of Hospitals, Asylums, Unions, Gaols, and other Buildings which may require to be painted during occupation.—Sole authorized Agents for England:

MESSRS. C. GRABHAM AND CO. 4, BARGE-YARD, BUCKLERSBURY, LONDON.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Arkist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be entirely avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped—HUBBUCK—LONDON—PATENT. And if not so marked the quality is not warranted. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has entirely CLOSED his Establishment on the Surrey side of the Thames, and that Articles of this manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Pread-street, Paddington.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the best Cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle by those who have hitherto had the monopoly—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly exceeds them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. A account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days (under patent), and all other Cements in use for building purposes. Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White Mastic, Hair, Lias Lime, Lathe, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, d to Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied or shipment, on advantageous terms.

NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishments, &c.—will not twist, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7 0 0
Fine	3 0 0
Course	2 10 0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour resembling the Bath stone.—CHARLES RICHARDSON, 6 South Wharf, Paddington.

11 George-yard, Lombard-street City

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise—Apply to G. BOOTH, Agent, as above.

TO BUILDERS CONTRACTORS, SHIPPERS, and Others.

G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland-yard, Westminster.

DAVIES and NORMAN, Agents.

Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.

IN EVERY VARIETY.

SOUTHAM BLUE LIAS LIME and PORTLAND CEMENT WORKS.—OLDHAM and TATHAM are now prepared to receive orders from contractors builders, and merchants for Ground and Lump Blue Lias Lime, also for Portland Cement and Lias and Bath Cement, both of which will be found of very superior quality, and will be improved by the addition of two or more parts of sand to one of cement. Coals and Tiles boats can run alongside any wharf or works, and all orders addressed to Warwick will receive prompt attention.—Office, Warwick.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.—T. H. BOORMAN, WILD, and CO. beg to inform the public and trade generally, that they have completed their works for the manufacture of PORTLAND CEMENT, and from their contiguity to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, a siding from which will be carried into their works, enabling them thereby to transmit any orders they may receive to any station on the before-mentioned line, and confidently hope they shall be able to supply the public with a first-rate article in both cements and lime, on moderate terms. Persons sending orders for cement, are respectfully requested to say for what purpose it is required, and printed instructions will be affixed to the head of each cask.—Orders to be addressed to Mr. THOMAS WEEKES, Agent at the Works.

Agents in London:—Messrs. GEORGE POTTER and CO. Lime Merchants, Purfleet Wharf, Blackfriars; and 19, North Wharf-road, Paddington.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Wouldham-hall Grey Stone Lime Works on the Medway, near Rochester, March 31, 1855.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction is constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SEconds, PAVIORS, STOCKS, and other BRICKS.

CHARLES RICHARDSON 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, and that the largest orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH perfectly NON-ABSORBENT (no quantity of rain having any effect upon it), and will not VEGETATE or RUB OFF. Sussex Cement and Stucco Paint. CLARK and BENOUGH, Manufacturers.—Office, 4, George-yard, Lombard-street. Works, Grand Surrey Canal Bridge, Old Kent-road

TO CAPITALISTS, POTTERS, CHINA, BRICK, AND TILE MAKERS, AND LANDOWNERS NEAR RAILWAY STATIONS.

HANDS'S GREAT ECONOMISING PATENT KILN.—Capitalists and Persons engaged in the above Works, Owners of Land containing Brick and Tile, or any other valuable Earth near Railway Stations, are particularly invited to look at HANDS'S GREAT ECONOMISING PATENT KILN. From its construction it enables persons to build one on any suitable spot where he pleases, so to economise the heat that all that GREAT WASTE and extra expense looked for as a matter of course in the old system is completely avoided, by causing the heat to dry sand, and every description of strong moulded clays at any season, in time of burning and cooling the kiln, with perfect soundness. No cost required to keep up the works all the year round beyond the coals put on of about six or seven tons of coals to burn off 20,000 goods in each kiln. Any persons desirous to avail themselves of this opportunity for a district or otherwise, may apply, if by letter prepaid, to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom, Surrey, where the Kiln is to be seen, by appointment only.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new, whether of thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 69, King William-street, City, London. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvetoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4d. per Tile, of about 12 inches long. Stop-ends and Outlets, 6d.

THE KINSON CLAY-WORKS, POTTERIES, and FIRE-BRICK ESTABLISHMENT, near Poole, Dorset, Manufacturers of every description of Sanitary Glazed Sewage-pipes, Closet pans, Furnace-blocks, Fire-bricks, Gas-retorts, Crucibles, &c. &c.—The completion of the Kinson Pottery places the Proprietors in a position to supply Builders and the Trade generally with any quantities of the above description of Articles at moderate prices. The pottery is situate about a mile and a half from the town and port of Poole. It is worked by steam-power, and the pipes are made by the most approved patent machinery, and will bear favourable comparison with any manufactured in the kingdom. The fire-bricks have been tested, and are found fully equal in all respects to those manufactured at Stourbridge and Newcastle. All articles are made from the clays and materials found on the estate. There is an inexhaustible quantity of all descriptions of Dorsetshire Clay, used for pottery purposes, which can be supplied to the Staffordshire, North Country, and London markets, upon favourable terms.

Lists of prices and all other information will be furnished, upon application to Mr. T. W. GREEN, at the Works.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 31, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietors; and, thirdly, that the "REASONS OF THE JURIES," page 581, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 30s. per 1,000; 9-inch floor bricks and 6-inch paviors, at 37s. 6d. per 1,000; 8-inch pavings, at 27s. 6d. per 1,000; 9-inch pavings, at 32s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

THE BEST HERTFORDSHIRE MALM SECONDS;

THE BEST WHITE SUFFOLK and RED FACINGS:

DEEP-RUBBING BRICKS.

Also COWLEY and KENT STOCKS, in any quantity.

J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.

Stourbridge Fire Goods, &c. of all descriptions, and of best quality—WOOD and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent—Mr. J. UNWIN, Private Residence, 59, Nelson-square, Blackfriars-road.

TO BRICKMAKERS.

WANTED, a Quantity of FIRST-RATE BRICKS, of a deep rich red colour (not orange tint); also a quantity of the best BLACK BRICKS, or as nearly black as is possible, to work in alternate bands in the front elevation of the Sheffield School of Art. Any one having such bricks, either the red or the black, for sale, will be pleased to send samples, with price, to the undersigned, as early as possible.

THOMAS E. MYCOCK, Contractor.

Sheffield, 108, Pargate, Sept. 19, 1855.

*** This advertisement will not be repeated.

BRICKS.—Builders wanting Bricks of good colour, are solicited to call on B. PARKS, Lewisham, and see the quality and low prices. Carters within six miles can have most reasonable terms. Red facing bricks at 30s. All kinds of tiles, paving bricks for open building, salt glazed stone pipes manufactured; also all kinds of red pipes and pots.—Application by letter punctually attended to.

TO BUILDERS, CONTRACTORS, and OTHERS.—TO BE DISPOSED OF, at very low prices, a large quantity of very hard BUILDING BRICKS, TILES, and PAVING WARE; also, 3, 4, 6, 9, and 15 inch red Socket Drain Pipes, in 2 feet lengths.—Apply to St. JOHN HEWITT, Redhill Works, Southampton.

BRICK and DRAIN-TILE WORKS to be SOLD or LET, with immediate possession. The stock of bricks may be taken at a valuation. The Works (from London, adjoining a railway, with a railway siding up to the brick clamps. A good business in coals and Lon on manure may be carried on.—Address, A. R. at Brook's, New-street, Road-b-court, Fleet-street London.

DUTCH CLINKERS, 32s. per thousand, by the best Makers.

WELSH, STOURBRIDGE, AND NEWCASTLE FIRE-BRICKS, LUMPS, AND TILES, at much less than cost prices. The BUSINESS to be DISPOSED OF, with the valuable condition, and a portion of the PREMISES to carry on the same TO BE LET, at almost a nominal rent. For particulars inquire on the premises, Honduras Wharf, Bankside, Southwark, London.

TO STONE-MASONS AND BUILDERS.

GEO. S. TOVELL, Stone Merchant, Three Cranes Wharf Ipswich, embraces this opportunity of thanking his friends for the liberal patronage he has received; and begs to inform them, and the trade in general, that he is now enabled to supply them with every description of stone of the best quality, and at the lowest remunerative profits. Also fire-bricks, lumps, and quarries glazed and unglazed, socket drain pipes, chimney pots of every size and shape, and pan and plain tiles, of the best Yorkshire make. Also, wanted to purchase an OVER-HEAD TRAVELLING CRANE, capable of lifting from 15 to 20 tons. Price and particulars to the above address.

BENJAMIN GILL, 7 Wharf, New Basin, Leeds, Yorkshire, STONE MERCHANT in all its branches. Worked orders, &c. executed to any plan. Single truck-load or cargo sent to any place or port in the kingdom. Prices, &c. supplied on application at the above address. Charges moderate.

WILLIAM S. LAWRENCE, PENNANT STONE MERCHANT, St. pleton. Office—10, Merchant-street, Bristol. All descriptions of Steps, Landings, Troughs, Tombs, Curb, Ashlar, Paving, &c. &c. on Sale at Stone Quarries situate at Stapleton, and at Conham, on Banks of River Avon, near Bristol.

THE LIZARD SERPENTINE COMPANY manufacture and sell in block and slab, the beautiful Stone now raised from the lower Serpentine Quarry—Columns, pieces, Columns, Fonts, and ornamental works on view, at 20, Surrey-street, Strand.

HENRY COX, Manager at the Lizard.
F. W. RUFFLE, Agent in London.

THE LONDON and PENZANCE SERPENTINE COMPANY having just opened an extensive SHOW-ROOM, at No. 18 Watling-street, City, road, for the sale of CHIMNEY-PIECES, and other articles, useful architectural, and ornamental, invite Architects, Builders, and the trade generally, to inspect the same. A large assortment of fancy articles are also always on sale at the Company's Stall in the Mineral Manufactures Court, in the Crystal Palace, Sydenham. Estimates given, and orders promptly executed.

July 25, 1855. C. ADENEY, Secretary.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS,
MILLBANK-STREET, WESTMINSTER.

Marble of all kinds and of best quality, in block and slab, Marble mortars, &c.

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 9, Crescent-Place, Millbank, to others on the same premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer his agent.

Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

MARBLE.—The Italian Marble Company, Importers of the produce of their many quarries in the province of Massa Carrara, Italy, beg to inform the general marble trade in the United Kingdom that they are prepared to undertake Contracts for any quantity of Statuary, Veined, Sicilian, Bardilla, Dove, and other Marbles, in blocks of all dimensions, delivered on shipboard at Leghorn, or in dock, London. A constant stock is always kept at the London Depôt. Orders for Paving Slabs, Garden and Hall Statues, Vases, Tazze, Chimney-pieces, &c. executed and delivered at reasonable rates.—For further particulars apply at the Offices of the Company, 18, Cannon-street, City.

WILLIAM W. BONNIN, London Secretary.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Sienna, St. Anna, Italian, Serpentine, verd antique, &c. Portland, Harehill, Park Spring, and other stone, in blocks, slabs, landings, and headstones. Yorkshire paving, granite curb, &c. All goods expertly packed, and forwarded to any part of England. THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

PIMLICO MARBLE WORKS,
BELGRAVE-WHARF,
LOWER BELGRAVE-PLACE.

SAMUEL CUNDY,

THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL.

PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

PHŒNIX GAS-LIGHT COMPANY.

PORTLAND STONE for SALE.—TO BE SOLD, in Lots of 100 cubic feet and upwards, a quantity of DRESSED PORTLAND STONE, in large cubes, suited for builders and masons.—On view at the PHŒNIX GASWORKS, Bridge-foot, at Vauxhall, where particulars may be obtained on application, or at the Company's Principal Office, 70, Bankside, Southwark.

By Her Majesty's Royal Letters Patent.

London Agents—TRUGELLES and TAYLOR, 3 Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard
This Granite is selected for the New Westminster-bridge.

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf Canal-road King's-cross, London, continue to supply the trade with all descriptions of Marble, in Block and Slab, at the lowest prices.—N.B. A good stock of Statuary Slab on hand, suitable for shelves.

YORKSHIRE STONE.

GEO. VINT and BROTHERS beg respectfully to inform Architects Surveyors Contractors, Builders, and Masons that they can supply the trade with all descriptions of STONE, including Paving, Bramley Fall, Park Spring, &c of the very best quality direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms.

GEO. VINT and BROTHERS will also forward prices by post on application.—Address, Idle, near Leeds.

BATH STONE DEPOT, BOX STATION, ROBERT STRONG, STONE MERCHANT, Box, Wilts.—Box Ground Stone, Scaliet Block Ashlar, Rungework, &c &c. supplied direct from the Quarries; also every description of Stonework for Building purposes, both plain and ornamental, prepared ready for fixing, and forwarded to any part of the Kingdom. Vases in elegant variety always on view; Urns, Fountains, Chimney pieces, Tombs, &c &c

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, cheese, Roman, Pitched, and Keene's cement, blue lias, Dorking and chalk lime, plasterers' hair, Yorkshire plain, pan and ridge tiles, glazed sewer pipes, closet pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS.
BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

MARKET-WHARF, REGENT'S-PARK-BASIN—WEST END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Lockers, Steps, Landings, &c cut on the shortest notice. Country orders promptly attended to

THOMAS TILNEY, YORKSHIRE STONE MERCHANT, Tadcaster-place, Leeds. To Builders and Buyers of the Best Quality Paving from the Quarries in Huddersfield of five tons. Paving, Landing, and Cut to sizes, Steps, Copings &c &c supplied on most advantageous terms by railway, and with despatch. Prices sent on application.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, Royal Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries, Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharp, Cooley, and Co., and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

SLATING.—T. B. HANNAFORD is not only in a position to execute any amount of the above work at an exceedingly low price per square, but believes himself to use first-class slates, similar to those used by him in covering in the principal mercantile and government buildings in the City. A list of which he will forward on application. Trevalga Wharf, Rat-Hill-road.

LLANGOLLEN FLAG and SLATE COMPANY.—The present proprietors of the Quarries, formerly worked separately by the Llangollen Flag Stone Company and the Llangollen Slate Company, have now prepared to supply architects, contractors, slate merchants, builders, and others with FLAGS, SLATES, and SLABS of every description, Cisterns, Chimney-pieces, Baths, Filters, Larders, Mangers, Roofing, and every other article made of this useful material all of superior quality. The Llangollen Slabs from their great durability and the extraordinary size in which they can be obtained, are peculiarly adapted for the paving of railway stations, malt-houses, breweries, conservatories, wine cellars, &c. A cheap variety of self-faced flags for street paving, &c. can be supplied at very moderate prices. Price-and further particulars can be had upon application to Messrs JOHN TAYLOR and SONS, 6, Queen-street-place, Upper Thames-street; Mr. S. VENABLES at the Company's Premises, 4, Wharf, South Wharf-road, Paddington; or to Mr GEORGE P. DYKE, at the Works of the Company, Pentrefelin Wharf, Llangollen.

TO BUILDERS and Others in Town or Country.—For PRICES of BANGOR SLATES, apply to SOLES and WOOD, Market Wharf, Regent's park

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c.

ENAMELLED SLATE CHIMNEY-PIECES, of elegant designs and superior workmanship, in great variety, at prices from 30s. to long means. Slate Coffers made to any size. J. HOWELL, Manufacturer, 9, Cook's-grounds, King's-road, Chelsea, Middlesex.

BANGOR SLATES, of all sorts and sizes; SLABS of all dimensions, and of superior quality.—For prices and particulars, apply to J. EASTWOOD and SONS, Surrey Canal-bridge, Old Kent-road.—Export orders supplied promptly.

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Builders, and Others, that his Price Lists for Slates and Slab Work, can be had on application, enclosing a postage stamp. Country and export orders promptly attended to.—N.B. A liberal discount to the trade.

ENAMELLED SLATE. — REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 20 and 46, Upper Belgrave-place, Pimlico.

AUSTIN'S ARTIFICIAL STONE.—This material (frequently confounded with Portland Cement) has now been in extensive use among the highest class of residences for about twenty-five years. During that time a collection of Ornamental Work, such as Vases, Figures, and Fountains, has been accumulating, of which the public have scarcely any idea. Suffice it to say, that a single copy of each work would collectively run out to between 4,000 and 5,000. In consequence chiefly from Terra-Cotta, and all other kind of Pottery, there is no distinction of form by the process of baking, and, instead of the glazed surface of Terra-cotta, it has the closest resemblance to Portland Stone, having also the advantage of being waterproof. AUSTIN and SEELEY, Nos. 1 to 4 Keppel row, New-road, Regent's park.

*** A large Stock of Ornamental Chimney-tops.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.

Apply to JOHN PILKINGTON, BOLONCEAU'S BITUMEN, PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.

N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

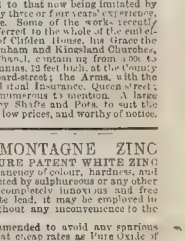
ASPHALTE PAVEMENT, 2s. 3d. per square yard, 2½ inches thick, for footpaths, railway platforms, coach yards, garden paths, &c. Carriage Roads, 3s. to 3s. per square yard. Railway Arches made waterproof, 2s. per square yard. Every description of pavement laid down, and the work guaranteed.—Apply to Messrs. WRIGHT and BROWN, 32, Bucklersbury, City.

CROGGON and COMPANY, Manufacturers of
PATENT ASPHALTE ROOFING,
BOILER, RAILWAY, SHEATHING and INODOROUS FELT
For Damp Walls and Lining Iron Houses,
2, DOWGATE-HILL, LONDON.

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA COTTA to M. H. BLANCHARD, late of Poole's Original Works, and successor to them in the manufacture of this invaluable material, has been so successfully adopted for nearly a century in this country, by our eminent architects and others, for the adornment of our noblest built lines. Groups, Statues, Vases, Fountains, and Architectural Embellishments, at prices and quality that will defy competition, and will be found to be a different material to that now being imitated by parties of such a very inferior description of pavement, terrace, and with out practical knowledge. Some of the works recently completed by M. H. Blanchard to be referred to the whole of the entablature to the external part of Chiefden House, his Grace the Duke of Sutherland's; also Tottenham and Kingsland Churches, the turrets to the Camberwell Church, containing from 500 to 600 feet cube, the cash-sill Britannias, Temple Bar, at the County Fire Offices, Cornhill and Lombard-street; the Arms, with the allegorical group, at the Kent Mutual Insurance, Queen-street; and other works too numerous to be mentioned. A large Stock of newly designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the remedial effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any a lulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.



The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Gitpalit Agents. In London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 63, King William-street City, FREDERICK BRADY, Whole-sale and Retail Agent, 8, Tottenham-court, New road. In Manchester and Liverpool by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting shops, warehouses, dwelling-houses, &c. in Leeds, by Messrs. R. ANDERSON and CO. Timber-brush; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Hull, Plymouth, Portsmouth, Norwich, Ipswich, Leeds, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 13, Manchester-buildings, Westminster.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

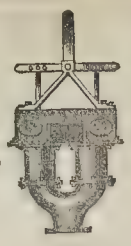
J. W. & SONS having of late devoted much time and study to the long neglected art of Bell Casting, have recently cast and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheels ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.



FOWLER'S
IMPROVED FARM AND COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, at 18s.

The usual allowance to the trade.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
B. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1853

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

HENRY DOULTON AND CO. MANUFACTURERS OF GLAZED STONE-WARE DRAIN-PIPES.

MANUFACTORIES: HIGH-STREET, LAMBETH, LONDON; ROWLEY REGIS, STAFFORDSHIRE; AND SMETHWICK, NEAR BIRMINGHAM.

OFFICES: HIGH-STREET, LAMBETH, LONDON.

TWENTY-ONE LARGE AND IMPORTANT TOWNS HAVE BEEN DRAINED WITH DOULTON'S GLAZED STONE-WARE PIPES, *and in no case has the slightest failure occurred.*

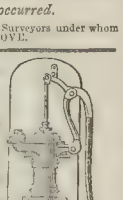
Messrs. D. and Co. do not publish Testimonials, but references can be given to any of the Engineers and Surveyors under whom they have executed works. DRAWINGS, WITH PRICES, MAY BE HAD ON APPLICATION AS ABOVE.

PORTABLE STEAM-ENGINES and MILLS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to

JOHN WARNER & SONS'



PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, there is less friction and expansive force required, and a considerably less number of strokes are necessary, rendering the pump considerably less than pumps made in the old way.

Deep and Water Engines for raising Water from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,

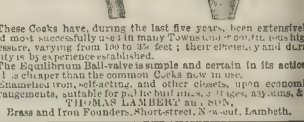
MEDWIN, HALL, and CO. Engineers, 69, Blackfriars-road, Sole Patentees and only Manufacturers.—N.B. Any of these engines may be purchased.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS



The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London

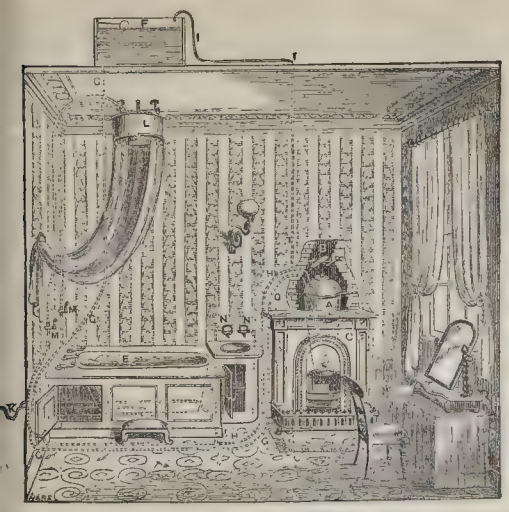
PRIZE MEDAL, CLASS 9

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns to resist high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action and cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economical arrangements, suitable for public buildings, barges, steamers, &c.



THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

PURE WATER, for manufacturing purposes may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the stone on as other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem will be found sufficient for ordinary domestic requirements, as self-acting, and not liable to get out of order. Larger sizes to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, Whitehall Wharf, Cannon-row, Westminster.

E. and W. STURGE invite special attention to their reduced LIST of PRICES of Drain Pipes, Junctions, Pans, Traps, &c.; also, to their Paving, Sinks, &c. Slabs of the best quality, wholesale and retail. Country builders and others supplied with all information on application to E. and W. STURGE, Bridge-wharf, City-road.

N.B. Flowerpots well arranged for carriage by small boats, or to the railways, to which but a small charge for carriage is made. January, 1855.

J. TYLOR AND SON'S BATH APPARATUS.

To fix a Bath, the apparatus for heating which can be fixed in the same room, and the luxury of an Open Fire retained.

A. Copper Boiler of sufficient capacity to make a warm bath, clasped by an iron band to support it, and fixed in the breast-work of a chimney. A flue is carried all round, and the draught is regulated by a revolving damper, *B*, which covers the opening into chimney. When set, the Boiler is entirely concealed from view.

This Boiler can be adapted for any chimney, by making it of an oval or elongated form.

A soot-door is fixed just underneath the damper for the convenience of cleaning, which, however, is rarely required, on account of the great draught round the boiler preventing any deposit of soot.

C. An ordinary stove front with sliding blower for the additional regulation of the draft.

E. Copper or tinned iron Bath, enamelled white marble inside, having three copper pipes, for the hot, cold, and waste water, which are indicated by the engraved levers on the cocks. The overflow is carried into waste-pipe *K*.

F. Cistern for cold water, say 100 gallons, which can be made of tinned iron, or any suitable material, either fitted into a recess or made of a cylindrical shape to stand on the floor of any room above the bath. The overflow can be carried into the waste or other convenient outlet.

G. Inch pipe from cistern to the pipe which goes to the bottom of boiler to fill it with water. A branch from this pipe also supplies the bath with cold water.

H. Inch pipe from the top pipe of boiler, to deliver the hot water into bath.

I. Half-inch pipe taken from the hot pipe *H*, and turned over the top of cistern to relieve the boiler.

K. Inch or 1¼-inch pipe to take away waste water from bath into soil-pipe or drain, as may be most convenient, and must be well trapped before entering.

L. Round copper or tinned iron Shower Bath, suspended from ceiling, and filled with hot or cold water by branches from the pipes *G* and *H*, the supply being regulated by the two cocks *M M*, which are let in the wall, an d have levers fixed on them, engraved, "hot and cold shower."

A thermometer can be fixed in the shower-bath to regulate the temperature.

N N. Wash-hand basin supplied with hot and cold water, by branches from the pipes *G* and *H*, the waste being carried into the overflow of bath.

By this simple arrangement, the boiler is always kept full of water, and cannot, by any means, be emptied by the action of the fire. The draught is so regulated by the blower and damper, that a bath can be made in twenty minutes, or an open fire kept contanully alight.

WARWICK-LANE, NEWGATE-STREET, LONDON.

HENRY MILLICHAMP,

MANUFACTURER OF

GLAZED STONE-WARE DRAIN-PIPES, BENDS, JUNCTIONS, TRAPS, &c.

SALES BY AUCTION.

NEW HOUSES of PARLIAMENT.—A Steam engine by Gough, with double cylinders, and useful Materials.

MESSRS. EVERSFIELD and HORNE will SELL by AUCTION, in the ROYAL COURT next the Victoria Tower, on TUESDAY, OCTOBER 2nd at TWELVE for ONE, by order of the Commissioners of Her Majesty's Public Works and Buildings, a 3-horse power High-pressure ENGINE, by Gough, with double cylinder and Crab, in excellent working order; about Twenty Yards of Timber; a quantity of Doors; two pairs of Iron Gates, and other effects. May be viewed by catalogues, which may be had one week previous of the Auctioneers, 49, Parliament-street, Westminster.

DESIRABLE INVESTMENT.

MR. PENNINGTON has been instructed by the Directors of the Cork, Blackrock, and Passage Railway Company to SELL by AUCTION, at the SALES ROOM of Messrs. Foord and Ellis, 5, Cornhill, on WEDNESDAY, the 17th day of OCTOBER, at the hour of ONE o'clock precisely, the valuable LEASEHOLD PREMISES, known as the VICTORIA BATHS and HOTEL, the handsome marine residence in occupation of Philip Cruise, Esq. and the LEASE of BUILDING GROUND adjoining, containing a frontage of about 750 feet, all held under lease for a term of ninety years and six months, from the 29th August, 1845 at the yearly rent of £95. This extensive property, on which a sum of over £6000 has been expended, is within a few minutes' walk of the railway terminus at Passage, and about an equal distance from the fashionable watering-place of Monkstown, from which steamers ply every half hour to and from Queen-town. It is beautifully situated on the River Lee, and possesses the important advantage of a quay and the strand to low water-mark in front. The baths have been fitted up in the best style, and contain gentlemen's and ladies' plunge baths, the gentlemen's plunge bath being 60 feet in length by 30 feet in breadth. There are also two hot, six sh wer, and two vapour-baths, with dressing-rooms attached to each. The hotel contains two kitchens, three sitting-rooms, an arched room, a pleasure or grounds, &c. There are forms are at present let to Mr Archd ald M'Dowl l, at a rent of £60 per annum, which is considerably under their value, but he tenancy is determinable on the 1st day of May, in each year. The house and premises in occupation of Mr. O'Connell are held by him, part under a lease for eight-six years from the 1st day of May, 1854, at the yearly rent of £30, and part under proposals for a yearly tenant, at £6 per annum. The latter premises he is bound to surrender on getting three months' notice. The buildings stand in about 1a. 3r. 0p. of the Hydropathic Establishment of Dr Curtin. It commands a perfect view of the river, and is admirably situated for a terrace or for marine villas. A free ticket for three persons, available for the Cork, Blackrock, and Passage Railway, to the head of the family once going every newly-built house of the annual value of £20 and upwards.—For abstracts of title and rental, with conditions of sale and map of premises, apply to DAVID HALL, Solicitor, 49 South mall, to HENRY BUNCOMBE, Secretary, Cork and Passage Railway Company; or to PETER PENNINGTON, the Auctioneer, 81, Patrick-street, Cork.

A. G. HARRIS, Secretary.

BOARD of TRADE DEPARTMENT of SCIENCE and ART.—INSTRUCTION in ART.—TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL-MALL, LONDON.

Art-Superintendent—RICHARD REDGRAVE, Esq. R.A.
Head Master—R. BURCHETT, Esq.

The Courses of Instruction pursued in the School have for their object the systematic training of teachers, male and female, in the practice of art and in the knowledge of its scientific principles, with the view of qualifying them to impart to others a careful and practical education, to develope its relation to the requirements of trade and manufacture, and its application to the common uses of life. Special courses are arranged in order to qualify Schoolmasters of Parochial and other Schools to teach Elementary Drawing as a part of General Education concurrently with Writing.

The Instruction comprehends the following subjects:—Freehand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera, and Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, objects of Still-life, &c, the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art. Also, Classes for instruction in the technical processes of Design and Enamel Painting, Drawing and Engraving on Wood, and Lithography in Chalk and Colour. The two best Classes for female students only.

Hours of Study—Morning, TEN to THREE; Evening, SEVEN to NINE, daily, except Saturdays. Fees 4l. per session, or part of the session. For Evening Classes only, 2l. per session.

The Class for Practical Geometry and Perspective, or that for Modelling in Clasting, may be attended separately on payment of a fee of 1l. per session.

Students have full access to the valuable collections of the Museum and Library, either for consultation or copying, as well as to all the lectures of the Department.

The school for female students not in training, is at 37, Gower-street, Bedford-square. Superintendent. Mrs. M'Ian. Fees per session.—Advanced Class, 2l and 1l., Elementary Class, 1l.; Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall mall, London.

THE ARCHITECTURAL EXHIBITION. All Drawings, Models, &c. or Specimens of Manufactures Patents, &c connected with Building, must be delivered at the Galleries, 61, Suffolk-street, Pall-mall East, on the 3rd or 4th of DECEMBER next.

Subscriptions may be paid to the honorary treasurer, or to either of the honorary secretaries, who will be happy to afford every information.

JAMES FERGUSSON, F.R.A.S. 20, Lansham-place, } Honorary
JAMES EDMESTON, Jun. } Secretaries.
5, Crown-court, Old Broad street

THE ARCHITECTURAL MUSEUM. Canon-row, Westminster.—Autumn Session, 1855.—On MONDAY, OCTOBER 15, a LECTURE will be delivered at the Museum, on Heraldry, in its connection with Architecture, by the Rev. CHARLES BOUTELL, M.A. Hour of admission, SEVEN o'clock. The chair to be taken at EIGHT o'clock.

Cards for the course of Lectures may be had on application at the Museum, and at the Office of "The Builder."

HENRY CLUTTON, Honorary Secretary.

October 4, 1855

THE EXHIBITION of the PHOTOGRAPHIC PICTURES, by ROGER FENTON, Esq. of the SEAT of WAR in the CRIMEA, is NOW OPEN at the Gallery of the Water colour Society, Pall-mall East, from TEN to SIX daily. Admission, One Shilling. Catalogues forwarded to the country on receipt of six postage stamps.

CONTRACTS.

Royal Engineer's Office, Sheerness, September 25th, 1855.

CONTRACT for CONSTRUCTING a PILED FOUNDATION for the Soldiers' Hospital, Sheerness.—The Commanding Royal Engineer, Sheerness, gives notice that TENDERS will be received at the Office of Ordnance, Pall-mall, on or before SATURDAY the 6th day of OCTOBER, 1855, from such persons as may be desirous of Tendering for the CONSTRUCTION of a PILED FOUNDATION for the Soldiers' Hospital at Sheerness. The plans may be seen, and printed specifications obtained at the Office, between the hours of TEN and FOUR each day (Sundays excepted), till the 12th day of OCTOBER, 1855.

NOTICE to BUILDERS.—The Commanding Royal Engineer of the London district hereby gives Notice, that sealed TENDERS addressed to the Director General of Contracts, will be received at the Office of Ordnance, Pall-mall, on or before the 11th OCTOBER, 1855, for the ERECTION of a RANGE of BUILDINGS for SCHOOLS and Schoolmaster's Quarters, at the Wellington Barracks, St. James's-park. The specification and plans for the above service may be seen, and forms of Tender obtained, at the Royal Engineer's Office, 31, James-street, Pimlico, between the hours of TEN and THREE o'clock, from the 20th SEPTEMBER, to the 11th OCTOBER, 1855. The Ordnance Department reserves to itself the right of rejecting the whole or any of the Tenders.

Royal Engineer's Office, London District, 27th September, 1855

NOTICE to BUILDERS.—The Commanding Royal Engineer of the London District hereby gives Notice, that sealed Tenders, addressed to the Director General of Contracts will be received at the Office of Ordnance, Pall-mall, on or before the 8th OCTOBER, 1855, for SUPPLYING and LAYING DOWN GRANITE PAVING at the Tower of London. The specification and plan for the above service may be seen, and forms of Tender obtained, at the Royal Engineer's Office, Tower, between the hours of ELEVEN and THREE o'clock, from the 3rd to the 8th OCTOBER, 1855. The Ordnance Department reserves to itself the right of rejecting the whole or any of the Tenders.

Royal Engineer's Office, London District, 27th September, 1855.

ORDNANCE CONTRACT.—To BUILDERS.—Notice is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, on or before WEDNESDAY, the 10th OCTOBER, 1855, from such persons as may be willing to enter into a CONTRACT with the Ordnance for ERECTING a BAKERY, with MAGAZINE &c. near Southsea Castle, Portsmouth, county of Hants.—The plans, specification, and conditions of Contract, may be seen, and every information obtained, on application to Mr. HAWKEN, Clerk of Works, at this Office, any day, Sunday excepted, until the 10th OCTOBER, and where forms of Tender may be obtained.

N B. The Ordnance reserve to themselves the right of rejecting all or any of the Tenders

Royal Engineers' Office, Portsmouth, Sept. 27, 1855.

ORDNANCE CONTRACT.—NOTICE to BUILDERS and IRONMONGERS.—Sealed TENDERS, addressed to the Director General of Contracts, Ordnance Office, London, will be received on or before SATURDAY, the 13th of OCTOBER, 1855, from parties willing to contract for the CONSTRUCTION and ERECTION of a large IRON STORE for straw, at the temporary encampment at Aldershot. Plans may be seen, and specification and form of Tender obtained on application at the Royal Engineer Office, Aldershot, on and after MONDAY, 8th inst. The Tenders to be marked on the envelope "Barracks," and endorsed "Tender for Straw Store, Aldershot."

Royal Engineer Office, Camp, Aldershot.

ORDNANCE CONTRACT.—To BUILDERS and CONTRACTORS.—Notice is hereby given, that TENDERS will be received by the Ordnance, at their Office, Pall-mall, London, on WEDNESDAY, the 17th OCTOBER, 1855, before TEN o'clock in the forenoon from persons willing to undertake DEEPENING and WIDENING the DITCHES, and Raising the Parapet of Hilsea Lines, near Portsmouth, county Hants. Plans, specimen casting, and conditions of contract may be seen, and every information obtained on application to Mr. HAWKEN, Clerk of Works, at this Office, between the hours of TEN and FOUR o'clock each day, Sundays excepted.

Royal Engineer Office, Portsmouth, Oct. 3, 1855.

CONTRACTS.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Court-house, No. 1, Greek-street, Soho-square, on TUESDAY, the 9th day of OCTOBER, 1855, at ONE o'clock precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for the LAYING DOWN, CONSTRUCTING, and COMPLETELY FINISHING certain intended BRICK and TILE SEWERS, 6,660 feet in length, or thereabouts, with other works in connection therewith in Lisle-street, Hastings-street, Brunswick street, Newman's, Saint Chad's-place, Britain-street, Gray's-inn road; Ormond-place, Queen-square; Tennis-court, Middle-row, Holborn; and other streets and places in the county of Middlesex; and the maintenance of such works in complete repair for twelve calendar months. Plans, sections, and a specification of the above works, together with the form of Tender, may be inspected, and other particulars obtained at the principal office of the said Commissioners, No. 1, Greek-street, Soho-square, between the hours of NINE A.M. and FOUR P.M. on the 8th OCTOBER. The said Commissioners do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two sureties for the due performance of the said works. No Tender will be received after the hour above mentioned.

E. H. WOOLRYCH, Secretary.

No. 1, Greek-street, Soho-square.
Dated this 29th day of September, 1855.

IMPERIAL IRON FOUNDRY, and ECONOMIC RANGE MANUFACTORY.

Three ft. wide.....	£6	10
Three ft. three in.....	7	0
Three ft. six in.....	7	15
Three ft. nine in.....	9	0
Four ft.....	10	10
Four ft. six in.....	12	12
Five ft.....	14	14

Ceilings, 5s. per foot.
Fixing, 3s. per foot.
This valuable KITCHEN RANGE, the Manufacturer has much gratification in stating, has been in use several years, and given the utmost satisfaction. It may be used either with the fire open or closed, thereby avoiding the objection so naturally felt against having the fire at all times shut up, which is well known to generate a close unwholesome atmosphere.
The Prize Medal and Honourable Mention was awarded to this Range at the Great Exhibition of 1851.
To be seen in operation at the Manufactory,
J. SHERWIN, 62, TABERNACLE-WALK, FINSBURY.
Castings of every description in Loam or Sand.

IRON FOUNDRY, HARROW-STREET, LANT-STREET, SOUTHWARK.

FOUNDRY AND IRON WORKS,
88, DRURY-LANE, and CHARLES-STREET, DRURY-LANE.
GLOVER, BROS.,
Solicit the attention of the Trade to their extensive Stock of PATTERNS for CASTINGS of EVERY DESCRIPTION, either structural or ornamental.
Patterns of Girders, Columns, Balconies, Railing, Ornamental Carriage and Park Gates, Lamp and Street Posts, Tanks, Pipes, Book-rails and Stands, Lamp Rooms, Chairs and Boilers, and every description of ironwork to specification, and the work executed with every attention to quality and despatch.
GLOVERS' IRONWORKS,
168, DRURY-LANE, and CHARLES STREET.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

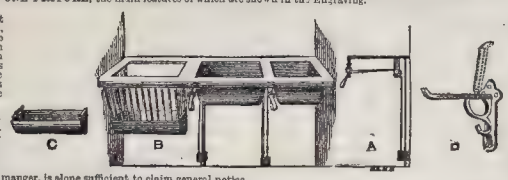
IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

'ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.



THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

NEW PATENT INVENTION FOR STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street,

are made important additions to their original Invention of PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, the main features of which are shown in the Engraving.

A represents the Patent Halter-guide and Collar-rein, the ball of which is taken to the back of the manger-works with freedom and ease up or down the guide bar, and is noiseless in its operation, as also a sure preventative against the most restive horse being cast in the stall.

B. The Patent Portable Seed-box can be instantly detached from the rack without disturbing the hay. The saving of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

C. The Seed-box detached, made of galvanized sheet-iron, light and durable.

D. The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAM'S MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, durable, and impervious to infection. Manufactured plain, galvanized, and enamelled.

IMPROVED SURFACE-DRAIN, with safety covers; Sanitary Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Preserving Saddle and Harness Brackets, and every Article in Stable Furniture in stock

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

Estimates and Catalogues on application.

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:

BENHAM AND SONS,

19, WIGMORE-STREET, LONDON;

and at the Crystal Palace, Sydenham.

SKAIFE'S GALVANIZING WORKS,

COMMERCIAL-ROAD, LIMEHOUSE, LONDON.

Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required.

Patent Galvanized Iron supplied in every form. Sheets plain and corrugated. Roofs fixed complete.

J. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, Plumbic Zinc, and Tiles.

AN ALLOWANCE TO THE TRADE.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the Stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO., opening to the Monument, London-bridge. Established A.D. 1700.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes and accidents from fire are effectually prevented by its use, while at prevents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S Office, 145, Regent-street, London.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails wrought and cut, Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, so much admired, &c. &c. 6d. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 300 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope street, Clare-market, London.

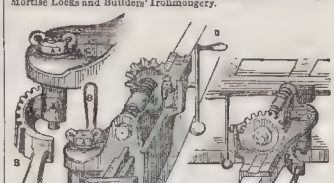
No. 1081, Class 5, Section 3, BRITISH DEPARTMENT of the PARIS UNIVERSAL EXHIBITION, 1855.

IRONMONGERY.

PFEIL AND STEDALL.

THE LARGEST STOCK AT

THE LOWEST PRICE,



5 AND 6, BROAD-STREET, BLOOMSBURY.

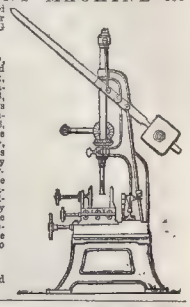
PATENT CORRUGATED IRON.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES

W. BISSELL, PATENTEE,

WOLVERHAMPTON. Manufacturer of Rein and Mortise Locks and Builders' Ironmongery.

AA. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 2 to 4 inches.

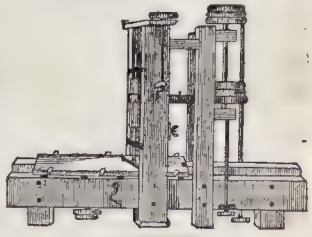


B. An eccentric notched lever, to be turned and pressed against the joist.

Lay the cramp upon the joist close up to the board, move the set screw in the slab up to the side of the joist, then fix the set screw FIRM. Turn the notched lever B against the joist, then, by turning the handle D, the lever will gradually fix itself and hold the cramp firm: the greater the strain, the more tightly, by its eccentric action, will the lever bind. The Patentee, in asking the attention of Builders and others, assures them that the cramp possesses great advantages. It is a BENCH cramp of the best kind, and as well suited for doors and sashes as for floors. From its superior mechanical principles, it has greater power, and will be found to be more quickly and safely used than any yet brought out, and at the same time it is light and portable.

HEATING BY HOT WATER.

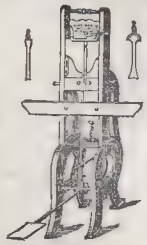
JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 500 feet in length, at the small expense per day in fuel and labour of 3s. 3d. This achievement in heating by hot water is unprecedented.



NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.

House and Cosch Builders, Joiners, Cabinet-makers, and others, doing similar work, are invited to call at the Patentees', FOWLS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see the action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.



VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

PLANING MACHINE.

PRIZE MEDALS have been awarded to these celebrated machines, both by the Great Exhibition in London, and many scientific institutions. They are extensively used throughout the United Kingdom, by joiners, contractors, coach and cabinet makers, railway carriage and waggon builders, machinists, agricultural implement makers, shipbuilders; and also by the British and French Governments, for planing and squaring up, moulding, tenoning, mortising, grooving, rebating, sawing and boring. Their operations are in every respect perfect, either in hard or soft wood, and will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost.—Sold only by WILLIAM FURNESS, Patentee, 20, Lawton-street, Liverpool from whom full particulars may be obtained.

SAWING, PLANING, and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

MORTISING MACHINE. 32l. to 35l.

KIMBERLEY'S PATENT MORTISING MACHINE.

The Patentee feels justified in calling attention of all Builders, Cabinet-makers, and others to this simple, strong, cheap, and most effective machine. Hundreds are in daily use all over the Kingdom, and ref rences to any extent can be given to prove it really is what it is represented, viz the most valuable tool ever offered to the trade.

Amongst testimonials of the highest character, he would respectfully invite attention to the following:—

"Rugby, June 14, 1855.

"Dear Sir,—In reply to your inquiry respecting the Patent Mortising Machine I purchased from you THREE YEARS AGO, I have to inform you I consider it a most SIMPLE, EXCELLENT, and DURABLE article, indeed I think it saving more than it deserves when I state it is highly superior every way to one I was recently induced to purchase from a London house, which, although represented to be unexcelled in its principle and make, has totally deserved myself and all others, as it is always breaking, and is useless in comparison with your own, upon which I believe not a sixpence has been expended since received from you, although in constant work. I candidly assure that its use in my shop is of GREAT VALUE, as it must, indeed, be to every builder who possesses it.

"I am, Sir, yours faithfully,

"JOHN PARNELL."

London Agents: Messrs. PUGH and CO. 14, King-street, Snowhill, who keep Stock of all Kimberley's Patent Goods, Flooring Cramps, &c.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price list, 10s.—55 and 56, High Holborn.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, Irons and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-pole, Rings and Lacquered Case Tube for Picture Rods. Desk Rails, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

212° MILNER'S HOLDFAST and FIRE-RESISTING SAFES (non-conducting and vaporizing) with all the improvements, under their Quintuple patents of 1849, 51, 54 and 1855, including their Gunpowder Proof Solid Lock and Door (without which no safe is secure)

THE STRONGEST, BEST, AND CHEAPEST SAFEGUARDS EXTANT.

MILNER'S PHŒNIX 212° SAFE WORKS, LIVERPOOL, the most complete and extensive in the world. Show-rooms, 6 and 8, Lord-street, Liverpool. London Depôt, 47A, Moorgate street, City.—Circulars free by post.

BUILDINGS HEATED by HOT WATER. G. B. COOPER, IRONWORKS, 181, DRURY-LANE. Ranges, Hot Plates, Gas Cooking Apparatus, Baths, &c. Ornamental and Constructive Ironwork.

CLARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby destroying Smoke.

This invention is now in operation upon Steam-engine Furnaces, of Cornish and Wagon Boilers, and upon Ovens. It is adapted to other descriptions of Furnace, such as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most perfect of the inventions extant in subduing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.

Ten furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS BROTHERS, Nine Elms, London.

Address, THE SMOKE-BURNER COMPANY, Nine Elms, London.

THOMAS EDINGTON, PURCHASER and INSPECTOR or CASTINGS on COMMISSION, 17, GORDON-STREET, Glasgow.

ESTABLISHED 1817.

WILLIAM HARMER'S Smiths' Works, Stove and Range Manufactory, and Ironmongery, Metal, and Zinc Warehouse, 10, Horseferry-road, and 1, New Peter-street, Westminster.—Contractors, Builders, &c. supplied with General Ironmongery at the lowest wholesale prices.

Cottage Ranges, with oven or boiler, complete, 22s. each.
Self-acting ditto, with ditto, from 25s.
Self-acting Oven and Boiler Ranges, with wrought fittings, &c. complete, from 45s. each.
Register Stoves, from 5d. per inch.
Elliptic ditto, with double backs, from 2½d. per inch.

Cast-iron Rain-pipe	2	2½	3 inch.
	11d.	1s 2d.	1s 4d. per yard.
4-inch Eaves Gutters, 9d. per yard			
O G Gutters	3½	4	5 inch.
	1s.	1s. 1d.	1s. 2d. 1s 6l per yard.
Best Cut Clasp	1½	2	2½ 3 inch and larger.
and Rose	16s.	15s.	14s. 6d. 14s.

1-inch Best Cut Lath, 13s 6d. per cwt.
Sheet Floor Brads, 13s 6d. per cwt.
Hoop Floor Brads, 13s. per cwt.

Sash Weights, 7s. 6d per cwt.; 9-inch Air Bricks, 3s. 6d. per doz.; 6-inch Stink Traps, 9s. per doz.; strong Stink Plates, with hooks, 2½d. per doz. Sheet Zinc, Perforated Zinc and Tubing. Estimates given for Iron Railing, Gates, Balconies, and Ironwork of every description.

J. MICHIE, Engineer and Machinist, Battersea-park, Nine-elms, manufacturer of all kinds of Steam-Engines, Portable and Stationary, Sawing and Planing Machinery, Cranes, Crabs, &c.

N.B. Several high-pressure Engines for Sale.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at 6d. per foot, including the Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne.
139, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

NAILS and IRONMONGERY, from BIRMINGHAM direct. Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the LOWEST BIRMINGHAM PRICES a complete LIST of which will be forwarded upon application.

Nail Manufacturer and General Factor, Regent-parade, BIRMINGHAM; or at 16, Gresham-street, LONDON.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than had heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, supply or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster, holding a large number of patents relating to the construction and reparation of the permanent way of railways, are at all times ready to communicate on the subject, and to grant licenses for their use. From the facilities thus afforded to companies to negotiate for a number of inventions, much trouble and chance of litigation is avoided. The Company undertake arrangements for bringing new inventions on the subject before the public, upon terms advantageous to the proprietors of patents.—Applications may be made to CHARLES MAY, F.R.S. the Manager; or to WILLIAM HOWDEN, Secretary.

TO STONE-MASONS AND BUILDERS.

GEO. S. TOVELL, Stone Merchant, Three Cranes Wharf, Ipswich, embraces this opportunity of thanking his friends for the liberal patronage he has received; and begs to inform them, and the trade in general, he is now enabled to supply them with every description of stone of the best quality, and at the lowest remunerative profits. Also fire-bricks, lumps, and quarries glazed and unglazed, socket drain-pipes, chimney-pots of every size and shape, and pan and plain tiles, of the best Yorkshire make. Also, wanted to purchase an OVERHEAD TRAVELLING CRANE, capable of lifting from 15 to 20 tons. Price and particulars to the above address.

BENJAMIN GILL, 7 Wharf, New Basin, Leeds, Yorkshire, STONE MERCHANT in all its branches. Worked orders, &c. executed to any plan. Single truck-load or cargo sent to any place or port in the kingdom. Prices, &c. supplied on application at the above address. Charges moderate.

WILLIAM S. LAWRENCE, PENNANT STONE MERCHANT, St.-pleton. Office 10, Merchant-street, Bristol. All descriptions of Steps, Landings, Troughs, Tombs, Curb, Ashlar, Paving, &c. &c. on Sale at Stone Quarries situate at Stapleton and at Conham, on Banks of River Avon, near Bristol.

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account, Mr. Thompson being no longer his agent.

Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

MARBLE.—The Italian Marble Company, Importers of the produce of their many quarries in the province of Massa Carrara, Italy, beg to inform the general marble trade in the United Kingdom that they are prepared to undertake Contracts for any quantity of Statuary, Veined, Sicilian, Bardilla, Dove, and other Marbles, in blocks of all dimensions, delivered on shipboard at Leghorn, or in dock, London. A constant stock is always kept at the London Depôt, Orders for Paving Slabs, Garden and Hall Statues, Vases, Terrass, Consoles, &c executed and delivered at reasonable rates.—For further particulars apply at the Offices of the Company, 18, Cannon-street, City.

WILLIAM W. BONNIN, London Secretary.

THE LONDON and PENZANCE SERPENTINE COMPANY having just opened an extensive SHOWROOM, at No. 18 Wharf, Macclesfield-street North, City-road, for the sale of CHIMNEY-PIECES, and other articles, useful architectural, and ornamental, invite Architects, Builders, and the trade generally, to inspect the same. A large assortment of fancy articles are also always on sale at the Company's Stall in the Mineral Manufactures Court, in the Crystal Palace, Sydenham. Estimates given, and orders promptly executed.

July 25, 1855. C. ADENEY, Secretary.

THE LIZARD SERPENTINE COMPANY manufacture and sell in block and slab, the beautiful Stone now raised from the lower beds of their Quarries. Chimney-pieces, Columns, Fonts, and ornamental works on view, at 20, Surrey-street, Strand.

HENRY COX, Manager at the Lizard.
F. W. RUFFLE, Agent in London.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.

THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces in Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

FLINT and CORNISH STONE MILLS, MILLWALL ISLE of DOGS, opposite Greenwich Hospital.—Messrs. WILSON and CO. beg to call the attention of potters, enamellers, asphalte, and other manufacturers, to their GRINDING MACHINERY, by which they can produce ground flint and Cornish stone, of a greater degree of fineness than is obtainable by any other process.—Orders for the home market, and for exportation, promptly attended to.

ANCASTER STONE QUARRIES.—JOHN WILSON, of Grantham, the Original Lessee of the Ancaster Stone Quarries, finding that stone got from the Haydor Quarries is being sold as Ancaster Stone, begs to caution Architects and Builders against the imposition.

The Ancaster Stone, which has stood the test for 500 years, needs no comment from him; but he thinks it right to let the world know that the Haydor Stone is defective, and not fit to be worked up with Ancaster Stone.

As a proof, he begs to say that he holds two quarries in Haydor (one of which has twelve years' lease to run), paying rent for them without daring to work them. Finding the stone was defective, he closed them some years ago. This is a fact which ought to be made known to all Architects and Builders.

J. WILSON would suggest to Architects the propriety of stating in their specifications where Ancaster stone is to be used, that the stone is to be "Wilson's Ancaster Stone."

Grantham, October 3, 1855.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS, MILLBANK-STREET, WESTMINSTER. Marble of all kinds and of best quality, in block and slab, Marble mortars, &c.

PIMLICO MARBLE WORKS, BELGRAVE-WHARF, LOWER BELGRAVE-PLACE.

SAMUEL CUNDY.

THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL.

PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 246, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, and Co.), Caen-wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to supply from their Wharf, as above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE.

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal-road, King's-cross, London, continue to supply the trade with all descriptions of Marble, in Block and Slab, at the lowest prices.—N.B. A good stock of Statuary Slab on hand, suitable for shelves.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace.—Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.

London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard. This Granite is selected for the New Westminster-bridge.

YORKSHIRE STONE.

GEO. VINT and BROTHERS beg respectfully to inform Architects, Surveyors, Contractors, Builders, and Masons that they can supply to any extent all kinds of YORK STONE, including Paving, Bramley Fall, Park Scars, &c. of the very best quality, direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms.

GEO. VINT and BROTHERS will gladly forward prices by post on application.—Address, Idle, near Leeds.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

MARKET-WHARF, REGENT'S PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

THOMAS TILNEY, YORKSHIRE STONE MERCHANT, Tanfield-place, Leeds.—To Builders and Buyers of the Best Quality.—Direct from the Quarries in truck-loads of five tons. Pavings, Landings got out to sizes. Steps, Copings, &c. &c. supplied on most advantageous terms by railway, and with despatch. Prices sent on application.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

SLATING.—T. B. HANNAFORD is not only in a position to execute any amount of the above work at an extremely low price per square, but pledges himself to use first-class slates, similar to those used by him in covering in the principal mercantile and governmental buildings in the City, a list of which he will forward on application.—Trevalga Wharf, Ratcliff-cross.

LLANGOLLEN FLAG and SLATE COMPANY.—The present proprietors of the Quarries, formerly worked separately by the Llangollen Flag Stone Company and the Llangollen Slate Company, are now prepared to supply architects, contractors, slate merchants, builders, and others with FLAGS, SLATES, and SLABS of every description; Cisterns, Chimney Pieces, Baths, Filters, Larders, Mangers, Hodgings, and every other article made of this beautiful material, all of superior quality. The Llangollen Slabs, from their great durability, and the extraordinary size in which they can be obtained, are particularly adapted for the paving of railway stations, malthouses, breweries, conservatories, warehouses, &c. A cheap variety of self-faced flags for street paving, &c. can be supplied at very moderate prices. Prices and further particulars can be had upon application to Messrs. JOHN TAYLOR and SON's, 6, Queen-street place, Upper Thames-street; Mr. S. VENABLES, at the Company's Premises, 4 Wharf, South Wharf-road, Paddington; or to Mr GEORGE P. DYKE, at the Works of the Company, Pentrefelin Wharf, Llangollen.

TO BUILDERS and Others in Town or Country.—For PRICES of BANGOR SLATES, apply to SCOLES and WOOD, Market Wharf, Regent's park.

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c.

ENAMELLED SLATE CHIMNEY-PIECES, of elegant designs and superior workmanship, in great variety, at prices from 21s. to 16 guineas. Slate Cisterns made to any size. J. HOWELL, Manufacturer, 3, Cook's-grounds, King's-road, Chelsea, Middlesex.

BANGOR SLATES, of all sorts and sizes; SLABS of all dimensions, and of superior quality.—For prices and particulars, apply to J. EASTWOOD and SONS, Surrey Canal-bridge, Old Kent-road.—Export orders supplied promptly.

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. His best goods are supplied at prices below those charged by other parties for very inferior imitations of his work. PIMLICO SLATE WORKS, 39 and 40, Upper Belgrave-place, Pimlico.

AUSTIN'S ARTIFICIAL STONE.—This material (frequently confounded with Portland Cement) has now been in extensive use among the highest class of residences for about twenty-five years. During that time a collection of Ornamental Work, such as Vases, Figures, and Fountains, has been accumulating, of which the public have scarcely any idea. Suffice it to say, that a single copy of each work would collectively amount to between 4,000*l.* and 5,000*l.* In contradistinction from Terra-cotta, and all other kind of Pottery, there is no distortion of form by the process of baking, and, instead of the glazed surface of Terra-cotta, it has the closest resemblance to Portland Stone, having also the advantage of being waterproof.—AUSTIN and SEELEY, Nos. 1 to 4, Keppel-row, New-road, Regent's-park.

*** A large Stock of Ornamental Chimney-tops.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.

Apply to JOHN ASKINGTON, POLONCEAU'S BITUMEN, PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.

N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

ASPHALTE PAVEMENT, 2s. 3d. per square yard, 2½ inches thick, for footpaths, railway platforms, school yards, garden paths, &c. Carriage Roads: 3s. to 6s. per square yard. Railway Arches made waterproof, 3s. per square yard. Every description of pavement laid down, and the work guaranteed. Apply to Messrs. WRIGHT and BROWN, 32, Bucklersbury, City.

THE SEVRES GLASS COMPANY.

LEGENDRE, TURPIN, AND CLARK

Take leave to inform the Trade that they have

OPENED AN ESTABLISHMENT FOR THE SUPPLY OF PLATE AND WINDOW GLASS, SHADES, POTICHE, LAMP AND OTHER GLASSES, ALSO WINE, SPIRIT, AND BEER BOTTLES, AT

131, UPPER THAMES-STREET, LONDON-BRIDGE. — WORKS: SEVRES, NEAR PARIS.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that **FOUR-FIFTHS** of the **ROUGH PLATE**, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by **HARTLEY'S PATENT**—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for **RIDGE and FURROW ROOFS**, giving a **SPAN** of **TWELVE FEET**, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders **BLINDS UNNECESSARY**, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

LIFE DEPARTMENT. Under the Provisions of an Act of Parliament, this Company now offers to future insurers four fifths of the profits, with quinquennial division, or a low rate of premium, with at participation of profits.

The next division of profits will be declared in June, 1860, when all Participating Policies which shall have subsisted at least one year at Christmas, 1859, will be allowed to share in the profits.

At the five divisions of profits made by this Company, the total reversionary bonuses added to the policies have exceeded 913,000l.

At Christmas last the Assurances in force amounted to upwards of 4,300,000l. the income from the Life Branch in 1854 was more than 200,000l. and the Life Assurance Fund (independent of the Guarantee Capital) exceeded 1,700,000l.

FOREIGN RISKS. Extra Premiums required for the East and West Indies, the British Colonies, and the northern parts of the United States of America, have been materially reduced.

INVALID LIVES. Persons who are not in such sound health as would enable them to insure their lives at the tabular premiums, may have their lives insured at extra premiums.

LOANS granted on Life Policies to the extent of their values, provided such Policies shall have been effected a sufficient time to have attained in each case a value not under 50l.

ASSIGNMENTS OF POLICIES.—Written Notices of, received and registered.

MEDICAL FEES paid by the Company, and no charge will be made for Policy Stamps.

Notice is hereby given, That Fire Policies which expire at Michaelmas must be renewed within fifteen days at this Office, or with Mr. SAMS, No. 1, St. James's-street, corner of Pall-mall; or with the Company's Agents throughout the Kingdom, otherwise they become void.

Losses caused by Explosion of Gas are admitted by this Company.

IMPERIAL LIFE INSURANCE COMPANY, 1, OLD BROAD-STREET, LONDON. Instituted in 1820.

WILLIAM R. ROBINSON, Esq. Chairman.
HENRY DAVIDS, N. Esq. Deputy-Chairman.

The SCALE of PREMIUMS adopted by this Office will be found of a very moderate character, but at the same time quite adequate and unexceptionable.

FOUR-FIFTHS, or 80 per cent. of the profits, are assigned to policies every fifth year, and may be applied to increase the sum insured to an immediate payment in cash, or to the reduction and ultimate extinction of future premiums.

ONE-THIRD of the premium on insurances of 500l. and upwards, for the whole term of life, may remain as a debt upon the policy, to be paid off at convenience; or the Directors will lend sums of 50l. and upwards, on the security of policies effected with this Company for the whole term of life, when they have acquired an adequate value.

SECURITY.—Those who effect insurances with this Company are protected by its subscribed capital of 750,000l. of which 140,000l. is invested, from the risk incurred by members of Mutual Societies.

The satisfactory financial condition of the Company, exclusive of the subscribed and invested capital, will be seen by the following statement:—

At the close of the last financial year, the sums assured, including bonus added, amounted to	£2,500,000
The premium fund to more than	80,0000
And the annual income from the same source, to	100,000

Insurances, without participation in profits, may be effected at reduced rates.

SAMUEL INGALL, Actuary.

PROFESSOR DONALDSON'S LECTURES on ARCHITECTURE and CONSTRUCTION, in UNIVERSITY COLLEGE, LONDON, will commence on TUESDAY, the 23rd OCTOBER, and continue through the Session 1855-56, on TUESDAY and FRIDAY EVENINGS, at 6½ and 7½. ENGINEER and MACHINISTS' DRAWING CLASSES, 26, Wardour-street, Oxford-street, and 26, Clarence-road, Kentish-town. A complete course of instruction for the practical mechanic, by means of the Orthographic Projections.—Prospectuses may be had at either address.

MATHEMATICAL DRAWING INSTRUMENTS. JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than are charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.

N.B. A few New and Second-hand Levels and Theodolites always for Sale.

TO ARCHITECTURAL DRAUGHTSMEN and PATTERN-MAKERS possessing a thorough knowledge of the geometric detail of Gothic ornament as applied to metal work.—Apply by letter, stating age and last employment, to Messrs. HART and SON, Wych-street, Strand.

TO ARCHITECTS

EXHIBITION and COMPETITION DRAWINGS, coloured or tinted, and superior LITHOGRAPHY, in its various branches, executed by Mr. T. J. RAWLINS (Author of Elementary Drawing Classes, adopted at Marlborough House; Outlines of Sculpture; Modern Architecture, &c.), 38, University-street, University College, London.

PHOTOGRAPHY.—A complete Apparatus, 3l. 5s. 5s. and 11l. 11s.—Send for a List, post-free, at GILBERT FLEMING'S, 498, Oxford-street, Author of "First Steps in Photography," price 6d.; by post, seven stamps.

TO ENGINEERS AND ARCHITECTS.

LEVELS, price 6l. of first-class work, consisting of a 16-in. telescope adjusted by rack, sun-shade, parallel plates for tripod stand, or jointed legs for use in a coal pit. The instrument is perfectly adapted for draining.—To be had of the maker, JOHN DAVIS, Optician, Derby.

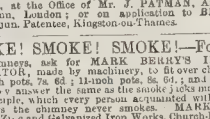
SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper.—Apply to Mr S. BARLOW, 2, Thavies-inn, Holborn (between 1 and 3½ p.m.); or to Mr. H. B. BARLOW, Office for Patents, Ducie-place, Exchange, Manchester.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. from the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 23, Albany-street, Regent's-park.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES. Established by Messrs. HYLTON, CASTELL, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural and Civil Engineering, Drawing, and Colouring. Making Finished and Working Drawings Preparing Specifications, Taking out Quantities, Estimating, &c. &c. Terms—Day Pupils, Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter, which includes Drawing Boards, T Squares, Plans, Drawings, Models, &c. For Prospectuses apply at the Offices, 24, Guildford-street, Russell-square.

TO DRAUGHTSMEN AND CIVIL ENGINEERS.



H. MORRELL, BLACK LEAD PENCIL MANUFACTURER, No. 149, Fleet-street, London.

These Pencils are prepared in various degrees of hardness and strength:—

H H H for drawing on wood.	F F light and shading.
H H for architectural use.	F for general use.
H for engineering.	B black for shading.
H for sketching.	B B ditto ditto.
H B hard and black for drawing.	B B B ditto ditto.
	B B B B ditto ditto.
M medium.	

Sold by all the principal Stationers in town or country.

VENTILATION.—PURE AIR.

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 126, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

LOOKER'S PATENT TUBULAR VENTILATOR is the CHEAPEST and most ORNAMENTAL yet introduced for effectually admitting pure air without a perceptible draught. Decorated to suit any building or apartment.—Particulars and prices may be obtained, and specimens seen, at the Office of Mr. J. PATMAN, Architect, 4, Serjeant's-inn, London; or on application to BENJAMIN LOOKER, jun. Patentee, Kingston-on-Thames.

SMOKE! SMOKE! SMOKE!—For Smoky Chimneys, ask for MARK BERRY'S IMPROVED VENTILATOR, made by machinery to fit over chimney-pots. For 10-inch pots, 7s. 6d; 11-inch pots, 8s. 6d.; and 12-inch pots, 9s. 6d. They answer the same as the smoke jacks made after the same principle, which every person acquainted with the smoke-jack knows the chimney never smokes. MARK BERRY'S Wholesale Zinc and Galvanized Iron Works, Church-lane, Whitechapel. Works, Whitechapel churchyard and Maidenhead court. Discount allowed to the trade.

The Builder.

Vol. XIII.—No. 661.

ALTHOUGH the war, and influences which happened to be in operation during its continuance, repressed the advancement of *art*, it will not have been assumed that all works were in abeyance.* In spite of high prices, private residences on an extensive scale, as we lately found, were completed; and long before the year 1815, more important works had been successfully accomplished.

What railways are now in relation to the engineering skill of the time, the canals were formerly. The chief works of the kind, those which originated with the Duke of Bridgewater, had been commenced shortly after the year 1756. But we find it stated that up to about the year 1800, application had been made for 165 Acts of Parliament for canals; from which we may infer, that these undertakings were hardly checked during the first years of the war.

After a quarter of a century's familiarity with the railroad system, the country still has reason to congratulate itself upon the commercial advantages of ample means of cheap internal communication. We shall have to mention other works more closely associated with our subject, which were undertaken, though some were not immediately commenced. Individuals realized largely by the Government contracts,—under circumstances, amongst those which we have still to regret are incidental to a state of war,—all possible inference to the contrary from the rhapsody of poet-laureates notwithstanding. And the possessions of the large landed proprietors quadrupled in value.

We have already brought the course of our history to about the year 1809 in England—the date of Covent-garden Theatre—at which period the singular character of our later architecture, as to contemporaneous practice of different imitations and divergent systems, had become fairly established. The importance of an active principle in art was under-estimated, and this in the practice of all the styles. The little tendency in the required direction which we discovered in the case of the Gothic style, defeated itself,—because, being not supported by knowledge of the old models, ignorance of available beautiful forms rather than *design* was that which was striking in the new work. In the practice of the Grecian style, the flight of art was further bound down by the utterly erroneous notion that the system was one limited in scope to the range of the known details,—though these were sufficient to allow of greater variety than was attempted. The reduced scale of expenditure on art, usually contemplated, and the seeming irreconcileability of three-storied façades with porticoes, were further difficulties. Whatever the style—and there were many styles attempted—whether we look at the whole, or at one such feature as a portico, it must be confessed that the result is generally unsatisfactory, whether the object be considered as *art*, or as mere imitation. A few remarks in the *Times* leader of a recent date, are quite apposite to the state in which art was found towards the end of the war period in Europe. The writer is speaking of political matters with which we have no present concern; but we may quote the whole passage to show the suggestiveness which there is often in a train of thought apparently far from *architectural*. The article says:—"The common sense of mankind has agreed that there is something inevitably little and narrow-minded in imitations. No imitator, no follower, *ever thoroughly understood his original*, or was anything else than *a reduced and bad copy*; and the best pupils have invariably found it necessary before long to sacrifice their love and admiration for their master to the higher instincts of independence and self-respect. Why Sir Robert Peel's small band of followers have not done this—why they make such a religion of doing what Peel did, and finding out what Peel would have done,—and why in this hopeless pursuit they put themselves into a bad position with nineteen-twentieths of their fellow-countrymen—which Peel certainly would never have done—we cannot divine. There is something morbid in the whole affair, and it is not to be explained by any common rules of action." Whether the reasoning applies to the case there in question, we say we take no trouble to seek; but we are very sure that it fits exactly on to that of many modern buildings, and the old models.

Eventually, indeed, in the use of the Grecian style, greater variety of detail was ventured upon, as by the Messrs. Inwood: whilst the method of combination of the portico and façade was modified by Wilkins, somewhat on the principle of the Glyptothek at Munich, commenced in 1820. The arrangement referred to (of which we shall have to speak in a subsequent place) is that of a central portico, rising so far above the general level, as to allow the line of roof and returning entablature to pass clear above the roof of the wings: in other words, the general building butts against the sides of a portico building;—the ordinary method reversing that arrangement, so as to give the appearance of a mere *superficies* of portico, stuck on to a building or façade. Even where the portico spans nearly the full extent of the front, in such cases usually at the end of the building, there may be a similar defect.

We have already referred to several omissions in the adaptation of Greek architecture, and we may again allude to the advantages of internal columns, and of recessing the back wall of the portico, as helping greatly, in lieu of the continuous roof. Windows at the back of the portico destroy the effect of breadth, and contrast of shade; and, moreover, at once convey the idea, that for the purposes of the building, the portico has no business there. Thus we may gather a few general principles, calculated to assist us much in the critical examination of the numerous attempts at the adaptation of Greek architecture which were made in London, in several important towns of the north of England, and in Edinburgh, and in Munich and Berlin. There are many old examples of porticoes which have neither internal columns, nor recession of the back wall,—perhaps the larger number may be of this character. But in such cases, whilst the portico has ample area and projection, it is made unmistakeably the whole end of the *building*. Where the width of the portico is less than that, a good design is not impossible; but the case is entirely altered. The old examples often differ from the plans given by Vitruvius; yet it would have been well had the Latin author received a little attention at this juncture,—for all his plans recognise the importance of what we are referring to. His temple *in antis* provides the depth of shade; and every addition by which the plan becomes prostylar, peripteral, pseudo-dipteral, or dipteral, leaves the original requisite for effect intact, or adds one other element of beauty. The points in question had been perceived by Holland; but it cannot be said that in Covent-garden Theatre, and some other works of Sir Robert Smirke, the same importance was attached to them, as by the Germans, Schinkel and Klenze. We shall have to instance, at Berlin, the Wachtgebäude and Museum, and at Munich the work we have already named. The application of the principles varied: still, the German architects would have at least recognised the importance of all that we have contended for. But it is probably an error to refer to the Glyptothek at Munich—as we have somewhere seen it done—as the first modern example of the application of the internal columns, and of some other features of effect. The further remark that such points were *never* considered in Great Britain, after the application of the Greek orders, is unquestionably a mistake. The Hunterian Museum at Glasgow has, if we recollect rightly, the hexastyle prostyle according to the Vitruvian precept,—at least so far as regards the retention of columns at the back, *in antis*. One who was mentioned in our last, Thomas Harrison, of Chester, at all events, was in his works alive to the points in question. His portico to the prison at Chester is hexastyle, with a double row of Grecian Doric columns. In the "Portico News Rooms" at Manchester he adopted the arrangement *in antis*. The order is Ionic, the columns, two in number, being unfluted; but the details are defective,—the echinus of the capital being even uncarved. Harrison deserves notice, as having been a considerable worker in the pseudo-Greek school, whose career seems to have commenced earlier than that of Sir Robert Smirke. Born in the year 1744; he visited Italy when very young; and on his return he built a bridge at Lancaster,—architects formerly, being not excluded from this branch of their calling. His chief works were executed at the beginning of the present century, when he was sixty years of age and upwards; and he adds one more to the number of those of former generations, of architects who lived to a green old age,—a piece of testimony to the value of our pursuit as it was formerly, of late years often rudely reversed. Harrison died at Chester, in the year 1829,—or, in his eighty-fifth year. Besides his works at Manchester and Chester, he was employed at Liverpool; at Shrewsbury, where he built the Hill Column; and at other places. He has also been recognised as the architect of the celebrated Dee Bridge, at Chester,—still, for the span of its single arch, a remarkable work; but, some of the chief contrivances in the structure have been ascribed to others. What he attempted in Gothic, is not better than the average of the day: St. Nicholas Church, Liverpool, is, we think, his principal work. In his ordinary style, his taste was highly estimated; of which the best evidence is the fact of his employment by the Earl of Elgin, on his house, Broome Hall, in Scotland, where the order used was Grecian Doric. The building which we mentioned as contemporary with Covent-garden Theatre—1809—the Manchester Exchange—was Greek, only so far as regards the use of a Doric order. The columns were attached to a semi-circular front, and there was a podium and attic. Perhaps few persons recollect that both three-quarter columns, and pilasters not used as *antæ*, are to be met with in the Erectheion, and that there are examples of the podium and attic, and some other especially Roman and Italian features, in Grecian architecture. With the general principle of the Greek architects, such forms were hardly consistent. The Manchester building was covered by a half dome, coffered, rising from an internal order of reeded Ionic columns. Externally the dome was concealed, thus according with what we shall find the practice of the German architects. The effect gained by contrast of the interior, and expanding vault, with the somewhat low appearance of the building by which the eye had been impressed externally, was not without value, and afforded a good lesson in proportion. Harrison would be an important person in the history of modern architecture, if only from the influence which his example had during many years

* See p. 469, *ante*.

afterwards, in rivetting the Greek style upon the architecture of the north. In parts of Lancashire especially, for some years, hardly any building of pretension, no matter what its purpose or general plan, was thought complete until it had received a porch, or a portico,—generally composed of Grecian Doric columns. The details of the original order were expressed with some fidelity; but the real artistic feeling infused into the work became even less than had been shown by Harrison,—to degenerate being, as often before this we have found, one result of the mistaken method in following a model.

One of the best instances which London affords of the erroneous use of the Greek models, is the building in Great Coram-street, now the Russell Institution, and which, possessing a peculiarly heavy version of the Greek Doric, was originally built for the light and festive purpose of an assembly-room. In referring to the pseudo-Greek architecture, in regard to deficiency of sculpture, we ought fairly to allude to the front of Covent-garden Theatre. On the portico, however, no sculpture was attempted. Covent-garden Theatre must have been an early modern instance of the use of cement for important public buildings; and the miserable condition of much of the surface just now, testifies, in one way, to the *value* of the innovation. The old building had been burnt down on September 20th, 1808, after the performance of the play of *Pizarro*, and it was supposed that ignited wadding from the guns had lodged in some part of the scenery. The first stone of Sir Robert Smirke's building was laid on December 31st, in the same year; and the new theatre was *opened* on September 18th, following. The private boxes, which were more numerous than in the old building, were handsomely fitted up, and had ante-rooms. It got bruited about that the object was to admit of assignations; so that, at length, no respectable lady could appear in these boxes. Probably this explains what was very remarkable in the plan of the main box-lobby, as independent of the saloon, namely, the *vacancy* of the ample space which had been intended for rest and promenading between the acts, and where Mr. Kemble expected that parties would take refreshments.

The theatre of Drury-lane, by Benjamin Wyatt, which one authority said was commenced on the 29th of October, a correspondent in a former number recollects under his supervision from the 21st of the month. In any inquiry into the principles of disposition in theatres, Wyatt's building would deserve particular notice, and his "Observations on the Design," &c. should also be consulted. We certainly think that some arrangement of the auditory in theatres, better calculated for convenience as regards seeing and hearing, if not productive of other advantages, might be carried into practical execution. Wyatt is understood to have followed the model of the theatre at Bordeaux, at the time considered the best theatre in Europe for music. The lesson which had been afforded by the destruction of two theatres within a few months, led to an amount of care in the planning and construction of the new building, which we believe has not been surpassed in any modern edifice, as perhaps it had not even in the works of the Romans. The staircases and landings (which are of stone) the architect was careful to have large enough to contain as many persons as could possibly be collected in the auditory. The opposite staircases, to the boxes — "King's side," and "Prince's side" (so called from the situations of the King's box and the Prince's box) —which ascend in one centre and two side flights alternately, have the centre flight exactly double the width of each of the side flights; and they would contain even more persons than were accommodated in the boxes, the number of persons for the whole of the boxes being 1,286, and that for the two staircases, 1,528. The "two-shilling gallery" in Wyatt's plan would hold 550 persons, whilst the two staircases to it would hold 805 persons. In the upper gallery the space allowed of 350 persons, and the staircase leading to it would hold 480 persons. In this calculation, the usual space for each person seated is taken,—being, of course, more than would be really occupied in a crowded staircase. Similar attention, it was considered, was given to the sizes of the openings; the doorways in the main part of the house being from 5 to 6 feet in width. Some of the means of internal communication, however, were found to be inconvenient, and had to be altered in 1822, when the auditory was remodelled by Mr. Beazley.

Certainly, with reference to the danger from fire in most of the London theatres, with their single, long, and narrow passage of entrance to several parts of the house, a nightly peril is run which will some day lead to a calamity of appalling character,—a result which has actually followed in other cases. At the Glasgow theatre, in 1849, some seventy persons were killed, through a mere panic. The temporary barriers in that case happened to be the chief cause of the loss of life; and we should say that some of these contrivances in the present theatre of Drury-lane would call for attention, if, as we apprehend, their arrangement would negative what merit there may be in the building plan. During the same year 1849, an accident at the Victoria Theatre and other occurrences were duly instanced and commented on in these pages*; and on the occasion of the destruction of the Olympic Theatre, which rivalled in rapidity the fire at Drury-lane, it was urged, that had the accident occurred during the performance, many persons would inevitably have been roasted alive. This terrific fate once befel the greater number of the audience in a theatre at Quebec. There, a struggling mass of human beings were jammed in the narrow doorway, and *could not* be drawn out by those outside; whilst the *smell of roasted flesh*, and other sickening details, are described in the account, which we find in the *United Service Magazine*, of some years ago. Are a few such lessons required in London? The great point which Wyatt had in view was, that each person in the house might be able to *feel* that sufficient means of escape were in existence. Thus the chief occasion of disaster—panic, might be prevented. Without attributing anything to such a cause—with present methods of construction—experience has shown that the progress of fire might be enough to leave little chance of escape. Even at Drury-lane—at least as the theatre exists at present—as regards area of openings, attention is called for, especially in the case of the pit. One of the original pit entrances seems to have been lately disused,—if have not others. The staircase and hall space of the boxes may be a trifle larger than might be allowed in cases where ground is valuable; but it is clear that apertures for egress should be always abundantly provided What we notice in the case of Drury-lane, shows that the lesson of the fire there is being gradually forgotten. All these matters should be placed under proper supervision.

Besides the structural provisions at Drury-lane against chances of fire, several tanks for water were placed on the roof, and pipes were conveyed into every part of the house; whilst in a cellar beyond the outer wall of the stage, was an engine on Bramah's principle, of sufficient power to throw water 10 feet above the roof of the building. In addition to this, an elaborate series of contrivances was placed, at great expense, under the direction of the celebrated inventor of Congreve rockets, by which it was supposed that the whole building could be at any time deluged with water. In the centre of the ceiling over the pit, was a pipe furnished with a contrivance for rotary motion at the end, on the principle of the Catherine-wheel, so as to throw water over the whole auditory. It was afterwards doubted whether the air-reservoir—to be filled by a condensing-pump—which was to set these contrivances in operation—had been made sufficiently air-tight. As experiment could not be resorted to in such a matter, it remained a moot point; and, fortunately, there has been no occasion for either the saving or the destroying agency of water. The writer in Britton and Pugin's "London," doubts whether the contrivances remained when he wrote.

The omission of the portico contemplated in the first design, we find commented upon in a number of the *Examiner* of the time, where the fault is laid to the "instructions of employers." Soane's reputation has no cause to thank our correspondent, for fixing it with the credit of the "miserable abortion" in Brydges-street. The steps here should be looked to; and perhaps require altered plan: we have often seen accidents. The amount of contract as given by Mr. Hodson, exceeds what is stated by the writer before referred to. The cost of Mr. Beazley's alterations and additions, was about 21,000*l.* The colonnade in Russell-street has little merit of any kind. The want of some protection had been loudly expressed. It is strange that all our theatres are still so inadequately provided with what might be made the means of expressing some novelty and beauty. The architecture of Drury-lane Theatre, as seen in the interior, was classical Italian in character, and the Rotonda, obviously designed with a recollection of the Pantheon, is not undeserving of praise. Much improvement might be effected here, and in the staircases, with attention to colour. The large outer hall is excessively mean; and just now, it is so dirty as to produce an impression of that kind which is not always *reasoned* upon by the public, but which we beg to say deserves the attention of any theatrical proprietary. The architect prided himself on the construction of the staircases,—as with reference to the abutment afforded by the circular landing of the Rotonda.

Benjamin Wyatt was the son of James Wyatt. Belonging to the same inexhaustible family was Samuel Wyatt, a builder in extensive practice, who built the Trinity House; Heaton Hall, near Manchester; Tatton Hall, Cheshire; and other works, of which he is called the architect. This Wyatt and James were brothers. Jeffry Wyatt, afterwards Sir Jeffry Wyatville, born in 1766, was nephew to these. He was educated at the free school at Burton-on-Trent, his birthplace, and up to the age of seventeen was filled with a passion for the sea. He made several attempts to get away, and at last was to have joined Admiral Kempenfeldt in the *Royal George*; but not reaching the vessel in time he escaped the disaster. He then visited London, still bent on the same object; but was taken into the office of his uncle Samuel, for seven years, and afterwards into that of James Wyatt, where he became known to the Prince of Wales. In 1799, he entered into partnership with a builder, Mr. John Armstrong, who had large Government contracts—valuable things in the case of buildings, as well as other kinds of work at that time. He was, however, employed extensively as an architect. His union of the two callings was not regarded with much favour by the profession; indeed, it also interfered for some time with his election to the Royal Academy; and great was the surprise when in 1824 he was summoned to Windsor by George IV.

MEMORIALS OF FATHER THAMES.*

An examination of the adjoining map (fig. 1), copied from an engraving made in 1771, will show better than words can express the march of London. We would, however, at present particularly direct attention to one or two points which more particularly bear on the condition of the Thames, and the question of drainage. G. is Old St. Pancras Church. It is not long since that was surrounded by fields. H. is the New Cattle-market, which will soon be hemmed in with houses. From this point to the Thames is now a dense mass of dwellings, from Paddington to the Tower. The Marylebone-fields, Brompton, and Chelsea, have grown into populous districts. Eastward we have Bethnal-green, Hoxton, Mile-end, Poplar, and all adding to the mass. The Isle of Dogs will in a few years be covered with buildings. Greenwich and Deptford are both growing. Beyond the black portion, shown in the engraving, which marks the extent of the Borough in 1771, we have Newington, Walworth, and other large neighbourhoods; and it is evident that before a quarter of a century has passed, London will not only have taken possession of the Isle of Dogs, but also of the ground now vacant on the west of Bow-creek. We are urged to direct attention to this circumstance in consequence of the present intention being to take the sewerage of the metropolis to the Plaistow Levels, or else to Barking-

* See pp. 375, 387, 419, 423, *ante*.

LONDON AND THE THAMES.

Fig. 1.—*Plan of London in 1771.*

Fig. 2.—*Plan of part of the north margin of the Thames, showing encroachments.*

creek, and then pass it into the Thames. This is done with a view towards purifying the river. It is to be feared, however, that this measure will not have the desired effect, particularly when we consider that the tide runs strongly in for *seven hours*, and *returns but five*.

When we remember the statement of Liebig, that "Thousands of hundred-weights of phosphate flow annually into the sea with the Thames and other British rivers," and that "thousands of hundred-weights of the same material flow annually back again to the land in the form of guano," we must hope, notwithstanding the difficulty of the subject, that the valuable materials from the sewerage will not be much longer wasted.* It therefore becomes a matter for serious consideration if we shall, in this instance, still persist in half measures, and convey our drainage to such a short distance from an immense population. The Dagenham Levels would allow a greater fall, and be attended with less danger. We ought at any rate not to establish a "Laystall" too close to London.

We have already alluded to the circumstance that in the wars, about a century ago, the watermen of the Thames could, in a case of necessity, supply 20,000 able men to the Royal fleet. This was an important arm of the national service; and it may not be without use and interest to gather up a few particulars respecting the regulations of the watermen, and the manner of conveyance on the Thames at that time, when the most rapid stage-coach did not probably exceed in speed the rate of seven miles an hour. Then a voyage up or down the Thames was an event to be well considered beforehand, and also to be held in memory for long after it took place; and so important were some of their voyages considered, that the daring travellers have, on certain occasions, *by the advice of numerous friends*, gone to the expense of printing and paper to place the particulars before the public.

In 1738, one Weddell, as we learn by a published account, accompanied by four or five friends, determined upon a voyage from London to Windsor. A large store of provision, wine, brandy, &c. was laid in, and, after grave discussion, it was determined that they should start from London at seven o'clock in the evening, in order that they might watch the break of day in the pleasant country. Their vessel was a barge partly covered at the stem, in the same manner as those of the Lord Mayor and City companies. After running aground, and experiencing some other alarms, the travellers put into port at Chelsea for refreshment, when some of them are desirous to spend the night ashore: this, however, is overruled. In the neighbourhood of Fulham, they again land about midnight, and an account is given of this hostelry on the Thames' bank, thronged with persons of all descriptions, who are here halting on their journeys of business or pleasure up and down the river. Here the travellers sup, and at the earnest entreaty of the *sailors*, are prevailed upon once more to embark, in order that they may catch the remainder of the tide. The daylight discovers them near Richmond; and, in course of time, and after calling at many ports, they arrive, nothing loath, at Eton, where they rest three days, the vessel in the mean time lying up in the harbour awaiting their pleasure. Weddell employs the greatest portion of this time in writing the book of the voyage, and is anxious to proceed again to London by water, but is overruled by a majority of his companions, and they proceed to town by chaise conveyance, preferring the dangers of the heaths and highways rather than trusting to those of Father Thames. Hogarth's voyage to Rochester, too, will be in the recollection of our readers.

Thames-street, a hundred years ago, was a place of very considerable trade, on account of its convenient situation near the river, the custom-house, &c. The quays, wharfs, and docks which were assigned by Act of Parliament for shipping, lading, and landing of goods, were as follows;—Brewer's-quay, Chester's-quay, Galley-quay, Wool-dock, Custom House-quay, Porter's-quay, Bear's-quay, Sorter's-quay, Wiggun's-quay, Young's-quay, Rafe's-quay, Dix-quay, Smart's-quay. Somer's-quay, Gaunt's-quay, Cock's-quay, Fresh-wharf, and Billingsgate; the latter of which, says Chamberlain, "is not so remarkable for loading and landing of goods and merchandize as it is for being the greatest market for fish in England, and the only port for fish in London. It is a large water-gate or quay, or port for small vessels laden with fish of all sorts, oranges, lemons, Spanish onions, and other commodities." Here, also, at that time, boats and wherries took in their fare for the "*Port of Gravesend*." Each vessel was obliged to depart at the ringing of a bell erected near the stairs for that purpose, which rung a quarter of an hour to give notice of the time of high water at London-bridge, and the time of ebb. On the wharf, the masters of colliers and dealers in coals held a common exchange every day at noon.

The vessels for the conveyance of passengers were something similar to that engaged by Mr. Weddell, and afforded accommodation for both inside and outside passengers, and during high winds and in stormy weather a voyage to Gravesend was not without adventure and inconvenience: sometimes the tide would turn before the journey was completed, and then the passengers were called upon in turn to assist the rowers. We knew an old gentleman, not many years since dead, who has often related, with great glee, that seeing the approaching necessity for this rough work, he has in sufficient time begun to complain to his neighbours of his crippled condition, he having the art of putting his fingers into certain unnatural shapes.* Besides the vessels above referred to, the traveller on the Thames could avail himself of either "oars" or "scullers." Some of the charges were as follows:—

	Oars. s. d.	Scul. s. d.
For crossing the river in every part between Limehouse and Vauxhall ...	0 4	0 2
From the Temple, Dorset-stairs, Blackfriars-stairs, or Paul's-wharf, to Lambeth	0 8	0 4
From London-bridge to Limehouse, New Crane, Shadwell dock, Bell-wharf, and Ratcliffe-cross	1 0	0 6

RATES OF OARS UP AND DOWN THE RIVER AS WELL FOR THE WHOLE TIME AS COMPANY.

	Fare. s. d.	Comp. s. d.
To Chelsea, Battersea, and Wandsworth	1 6	0 3
,, Kingston	5 0	0 9
,, Hampton-court	6 0	1 0
,, Chertsey	10 0	1 0
,, Windsor	14 0	1 0
Down the River.		
From London to Gravesend	4 6	0 9
To Blackwall	2 0	0 4
,, Greenwich or Deptford	1 6	0 3

The hire of a whole tilt-boat for goods to Gravesend was £1 2s. 6d.

It may be also worth while to mention, because the same sort of restriction might be usefully applied to the steam-vessels on the Thames at present, that to prevent the losing of lives of persons passing on the river, no tilt-boat or

* In 1849, the value of the guano imported was 507,362*l.*; in 1850, 707,633*l.*; and in 1851, about two millions sterling.

* The covered boats similar to the above plied between Newcastle-on-Tyne and Shields, and were called comfortable.

row-barge could take in at one time more than thirty-seven passengers, and three more by the way; nor in any other boat or wherry, more than eight, and two more by the way; nor in any ferry-boat or wherry, allowed to work on Sundays, any more than eight passengers, on pain of forfeiting for the first offence, 5*l.*; for the second offence, 10*l.*; and for the third offence, to be disfranchised from working on the river, and from enjoying the privileges of the Company. "And in case any person shall be drowned, when a greater number of passengers is taken in than is allowed, the watermen shall be deemed guilty of felony, and transported."

Every tilt-boat was to be of the burden of fifteen tons, and every other boat or wherry three tons: the wherries were also limited to 12½ feet long, and 4½ broad in the midship: those not agreeing with this scale could be forfeited.

An idea of the value of some of the ferries in the Thames may be formed from the circumstance that in 1766, the committee of the New Blackfriars-bridge agreed to invest the Watermen's Company with 13,650*l.* Consolidated 3 per Cent. Annuities, to satisfy them for the loss of the Sunday's ferry at Blackfriars, which was proved to have produced, upon an average for fourteen years, the sum of 409,210*l.*

It must be granted that the above notes show that fares, as regulated by the Watermen's Company, were moderate, and the regulations excellent; but 100 years since, the cost of traffic above bridge was enormous.

Respecting the stops, dams, or locks, on the Thames, Maitland, in 1756, says:—

"For though the Thames is said to be navigable for 138 miles above bridge, yet there are so many flats in that course, that in the summer season the navigation westward must be entirely obstructed for want of water when the springs are low—a misfortune not to be remedied by any other means than by locks—or certain machines called weirs — placed quite across the river, and so contrived as to confine the current of water as long as found convenient—that is, till the water rises to such a height as to allow depth enough for the barges to pass over the shallows, which being effected, the confined water is set at liberty, and the loaded vessel proceeds on its voyage until another shoal requires the same contrivance to hurry it forward; a great convenience, but the charge attending it is the subject of great complaint amongst the bargemen, being obliged to pay near 14*l.* in one voyage, if the barge passes through all the locks to and from London."

It is not worth while to give a list of all the locks. We may, however, mention, that the cost of a vessel passing the weirs, &c. from Lechlade to Oxford, a distance of 25½ miles, was 14*s.* 6*d.*: from Oxford to Bolter's Lock, 53½ miles, was 11*l.* 3*s.* 6*d.* or about 4*s.* 2*d.* a mile: at Kingston-bridge a further charge of 10*s.* was made. At Kingston the cost for locks, &c. from London to Lechlade, was about 13*l.* for each vessel.

We have already mentioned various enactments against the encroachments on the Thames, the extent of which may be partly seen by reference to fig. 2:—A, is the Tower; B, London-bridge; C, Wapping; D, Blackfriars-bridge; E, St. Saviour's Dock. The dotted line shows the direction of the old water wall of the city: it is therefore evident that all on the south has been taken from the river. The sketch is from a plan of 1771, and shows the Tower ditch completely surrounding the fortress.

On the north side of the dotted line we have amongst other old names, Addle-street, St. Peter's-hill, Old Fish-hill, Bread-street-hill, Garlic-hill, College-hill, Dowgate-hill, &c. On the other side are Blackfriars-stairs, Puddle-dock, Castle-street, Paul's-wharf, Trig-stairs, Queenhithe, Three Cranes'-stairs, Steel-yard-stairs, Coal-harbour-stairs, &c. East of St. Catherine's-lane, towards Wapping, the only places of old name near the present margin of the river, marked in this map, are St. Catherine-street, St. Catherine-lane, Pillory, Red-cross-street. Of places smacking of more modern times we have Artichoke-lane, Virginia-street, James's-rope-walk, King-street, Green-lane, Nightingale-lane, &c. On the edge of the river we have that far-famed landing-place, Wapping-old-stairs. There are also Wapping-new-stairs, Execution-dock, King Edward's-stairs, and King James's-stairs.

We have no distinct authority respecting the exact line of the river dyke from the Tower across the marshes of Wapping. It is, however, stated that about the year 1565 divers breaches were made therein, caused by frequent inundations of the river Thames, which were no sooner repaired than another happened in the year 1571, when the Commissioners of Sewers, after viewing the same, were of opinion that the most effectual way to secure the bank of the river in these parts would be to erect houses thereon; to which end ground was taken, and the first foundations of houses laid where Wapping is at present situated.

There is a Harleian MS. (1668) consisting of a roll of parchment of several yards in length, on which is inscribed the report of an inquest held in Smithfield in 1663, on the encroachments on the Thames and streams in the neighbourhood of Limehouse, Stepney, Barking-creek, &c. The damages with which numerous parties were charged, and in most instances fined various sums, were for buildings intruding upon the creeks, broken drains, refuse passed into them, and such like.

At the time when it was proposed to establish the docks at Blackwall, it was suggested that the Isle of Dogs should be devoted to the new docks: there were then only two or three houses on the island, and parties came forward who gave evidence of the *dryness and salubrity* of the place. Much discussion arose respecting the cutting a channel from the Thames to the docks, many fearing that it would cause a greater obstruction to the river than was at that time complained of in this part. The Isle of Dogs was, however, not eventually approved of, and the East and West India Docks were placed on their present site. Numerous reports, &c. on this subject, will be found by referring to the catalogue of the British Museum, under the heading "Thames."

In a report made about this time by Mr. J. Walker, engineer, that gentleman says,—"Whenever small rivers discharge themselves into larger ones, they then form banks and shelvings in proportion to the quantities of soil brought down by them. The common sewers bring down great quantities of soil into the Thames: one of the greatest of these is the principal sewer from Shoreditch, through Spital-fields, Bethnal-green, Whitechapel, Mile-end, Stepney, and Ratcliff, and discharges itself into the river at Limehouse, where it has formed a very dangerous bank of gravel, which has from time to time been brought down by it. The sand is carried farther down, and forms banks at Limehouse-reach."

THE CHEMISTRY OF BUILDING MATERIALS.*

The occurrence, in sandstones, of sulphuret of iron, is the cause generally of the unpleasant spots which appear in them. Copperas, or sulphate of oxide of iron, is readily formed in sandstone containing the sulphuret, when the stone is brought to the surface. The air penetrates through the pores of the sandstone, and effects the change. When rain-water brings the sulphate to the surface, then what was originally a green spot soon changes to a dark brown one; in fact, to brown oxide of iron, or iron rust. The less of all such things the better. The mica makes the stone more easily split: the clay destroys its tenacity and homogeneousness: the vegetable matter irregularly blackens it: the iron pyrites stains it after exposure to the air; and, if there be soluble substances, as potash, these promote vegetable growths; therefore, the more uniform, crystalline, hard, granular, and unmarked by dark spots, or glistening particles, or iron pyrites, a stone is, the better fitted is it, in the estimation of a chemist, for building with. A notion seems to prevail among builders and architects, which is largely warranted by the style adopted by writers on the subject, that stones like sandstone, known to have been produced by particles originally derived from older rocks, have some cement uniting together the little grains, and converting them into one mass. Now, no doubt, we have rocks thus cemented, as we see in pudding-stones, and brick-stone or laterite, and as we shall afterwards see when we come to mortars. Unquestionably there are certain bodies, such as lime, clay, and oxide of iron, more or less present in even those stones or rocks which we speak of, as if entirely consisting of something else, and these substances have a remarkable cementing power. But certainly the notion of the need of cement has been carried much too far, for what is it that cements together the particles of cement? Is there some cement within cement, and some cement again within that? There was a similar notion in Sir Isaac Newton's time in reference to chemical combinations, and it was a puzzle to know how an acid could combine with an alkali. This idea of a necessary cement is one which has too much prevailed among writers on architecture, Professors Daniell and Wheatstone leading the van in the matter. I do not pretend to say, that there are not cementing bodies distinct from the other components of a stone in many cases, but I think it a matter of great importance to say, that there is no need for supposing that such cements always occur. The most homogeneous rocks which the chemist or natural philosopher would prefer for building stones, are those which are least likely to have, and in which one would least desire to have, any such cementing matter. There is no point on which we can more confidently speak than this, that the particles of a powder will of themselves, without any cement of any kind, by mere pressure, and still better if, in addition to pressure, you supply heat, aggregate into a solid mass. In illustration, I may refer to the conversion of snow into a glacier. It is true, that the objection may be made, that there is a plasticity in snow favouring the union of its particles. But let us take blacklead powder. Probably most artists are aware, that their blacklead pencils are now no longer cut out of blocks of native blacklead or plumbago, these blocks having become exceedingly scarce and very costly. Instead of using this, coarse blacklead is taken, ground to very fine powder, rammed into a mould without any gum or cementing material, and merely subjected to a strong pressure: it comes out a solid mass, which can be cut into pencils like the native block. In the same way clay powder is now compressed into tiles for tesselated pavements: in the same way we can consolidate silica powder. There is no reason, therefore, why we should insist on cement occurring in sandstone; and when reporters state that the fine quartz grains in the Craigleith stone have a silicious cement, they are only saying that silica is cemented by silica; *i.e.* that a thing is cemented by itself. The truth is, that the best sandstones are those which simply have their particles compressed together closely, even though the particles are pretty large, as in a grit, and where they only touch each other at certain points. Once brought close together by mere compression, they adhere with a tenacity which the most powerful force can hardly overcome. We can imitate that result with the polished surface of glass. In our laboratories we may find, that if the stoppers of bottles are too nicely ground, and fit the neck of the bottle too neatly, they cannot, when once put in, be got out. You may make the same experiment by putting two panes of glass together, and firmly clamping them once, after which they will not come asunder; but, as has been found in the polishing of plate glass, they so cohere that you may saw them at right angles to their surfaces, and even polish their edges without separating them. I wish, therefore, that the notion of cement were

* See pp. 435, 447, and 460, *ante*.

laid aside, and that the builder would see that the less of foreign matter the greater the solidity, the tenacity, and the enduringness of a stone.

As far as regards sandstones, they are almost devoid of soluble matter. The great objections to them are the difficulty of hewing them, and the injury to the workmen's health in chiselling them,—this injury mainly occurring from the fact, that the very fine powder, into which the sandstones chisel, is alike irritating and irremovable. Chemists like myself are largely exposed to irritating agents, such as gases, acid vapours, and fumes of various kinds; but though their action is a very marked one, and chemists may suffer from affections of the lungs in consequence, still these vapours are sooner or later absorbed in the system, if their action is survived; but if the fine powder of silica dust once enter the lungs, it remains there like a foreign matter—like the fine steel dust from which the Sheffield knife-grinders and sword and razor sharpers suffer; continually exciting inflammation, irritation, cough, and ultimately consumption; and it is so notorious to hear of masons perishing early, who are solely employed in hewing, that I found one of them not apparently able to conceive of a mason surviving his wife. He spoke as if every one of them must of necessity leave a widow, and as if the notion of the husband living the longest was not to be thought of. The Rev. Dr. Nisbet lately devised a horn respirator, manufactured by Messrs. Blackhall and Scott, to save the masons inhaling this fine dust; but it would have needed also to cover the nostrils to have been of great service. Besides, you cannot give a man whose lungs are healthy, a respirator to wear all day long without enervating him. You compel him to breathe a warm air to which he is not accustomed, and it comes to a question, whether you do not do more injury to the lungs in one direction, than you prevent in another. Respirators are most serviceable to those whose lungs are injured, but no one would recommend a man with stout lungs to begin wearing one. No remedy has yet been introduced which the workmen have been found willing to adopt, while the moustaches and beard are but imerfect respirators. As already hinted, the only effectual mode of doing good, is so to arrange their sheds, that the hewers may be saved from the fine dust entering their lungs; and that, as much as possible, they should only work at these hard stones in summer, when they can chisel them in the open air.

It is quite enough to say, that sandstone is *one* of the best building stones, without saying that it is *the* best. In Scotland, we have little experience of the use of limestone as a building stone; but when one finds, that to a great extent the architects have preferred a limestone for the Houses of Parliament, certainly I would not be dogmatic enough to affirm, that sandstone was necessarily better.

The other silicious stones can be disposed of in a word. Under the head of basalt, trap, or greenstone, we include igneous rocks—that is, rocks which are believed to have been melted by heat, like the volcanic lavas, and afterwards consolidated. There are only two of these rocks I shall stop to mention. The one is basalt, a dark rock, very prone to throw itself into the columnar form. The other trap rock is what we call whinstone, or greenstone. It is mainly used as road metal, in the causewaying and Macadamising of roads. It is occasionally employed as a building stone, but there is an objection to its use as such, from its difficult working, its hardness making it difficult to chisel. No one calls it a freestone. Its dark colour also makes it objectionable in our climate. I wish, however, to direct attention to a softer greenstone, which is applied to a curious use in some countries and even in our own. It is called in our neighbourhood "Leck" stone. It is very soft for a trap rock, and it has not the ordinary objection made to trap rock, namely, its difficulty of cutting. Even with a knife one can cut it with little trouble. It is very smooth, and when you rub it, the surface has a soapy touch. These stones are preferred for the insides of bakers' ovens, and for other places to which heat is to be applied. A stone of the same kind is largely used in Norway for the insides of furnaces. It has a remarkable power of resisting heat, such as the ordinary greenstones have not, and is less liable to crack and break, or give way, when so employed. Some such stones are also used in Lapland, Norway, and India, for making pots and other vessels used in cooking. The peculiarity of this class of greenstones is, that they contain silica, and in addition, a large amount of magnesia. Magnesia is one of the most infusible bodies we know, and when united with silica, it forms a kind of stone more suitable than any other for resisting high heats.

A very beautiful rock is now coming into use as a building material in England and elsewhere, called Serpentine, from its being mottled like a serpent's skin. Those who visited the Great Exhibition, or have seen the Government Museum in Jermyn-street, London, may remember seeing large blocks of this serpentine. It consists of little else than silica, magnesia, and oxide of iron, the latter of which serves to colour the stone green and red. It is a soft stone, not very suitable for out-door exposure, but admirable for inside pillars. It is more easily wrought than marble, and is exceedingly beautiful. A rock analogous to serpentine is used as a building stone in our own country. It is the stone of which Inverary Castle is built—but is found on the opposite side of Lochfyne. It is of a bluish colour, and so soft that it can be cut by a saw. This stone is used in Glasgow like "leck" stone, for bakers' ovens; and if touched, it will also be found to have a soapy feel.

This curious class of stones consists chiefly of silica, much of which is present in a body much softer than mica, called "Talc." Talc has something of the look of spermaceti, and when touched feels soapy. The Inverary stone has the peculiarity of being pliant, and of being easily cut and sawed into mantlepieces and the like, by much simpler tools than are used for even our freest freestone. It hardens a little by exposure to the air, but never becomes very hard, yet it is capable of resisting much higher heats than harder stones.

The last class of silicious stones, which I merely name, are slates. They are the muds of worn-down rocks, converted by a process of consolidation into slates. Let us take, for example, the manner in which granite is ground down. It is sometimes ground down as a whole, and all its three constituents, quartz, mica, and felspar, deposited together. The rock of this finely-powdered matter, is called Gneiss, which may be regarded as granite, made up again into a solid stone—laminated as all these rocks are, showing that they have been deposited in water, and often also twisted and contorted by exposure to powerful forces. One can see the white felspar here and there, the glistening, shining mica, and, with a microscope, even the crystalline grains of quartz. It more often happens, however, that granite is reduced to a coarse powder and carried along in a stream, its ingredients becoming separated owing to their different density. The felspar in granite becomes a fine clay, and is carried furthest by the stream; the quartz, which is heavier, remains behind, and may form a sandstone. The mica is carried on further than the quartz, and very often predominates in sedimentary rocks, forming shining micacious schists. The name of Shale is given to a consolidated clay; when it gets hard, it is called a schist, and if very hard a slate, though in truth shales, schists, and slates, suffer imperceptible gradations into each other. They, however, have one character in common — they all have a more or less laminated or foliated structure. In other words, they are made up of leaves like mica. Occasionally, nay, frequently, they change, and all lamiuation ceases, and thus they form flagstones or clay-stones. They are easily wrought, and sometimes used as building stones, as in Wales, but more frequently as paving stones. The term slate or schist is restricted to the hard muds when they present a splitting character, which makes them suitable for the roofing of houses. Without entering into their derivation from other rocks, I will only notice, that in many roofing slates mica predominates. Clay alone, thoroughly consolidated, forms the best roofing slates; so that in many parts of the country these splittable stones are called tile-stone.

LIBRARIES, LECTURES, AND READING-ROOMS FOR VILLAGES.

A CONVERSAZIONE, in connection with the Berks and Bucks Lecturers' Association, was held on the 25th ult. in the Town-hall, Windsor, on which occasion the walls were covered with educational drawings, lent by the Society of Arts, the Working Men's Educational Union, and the Hants and Wilts Educational Society.

The Mayor (Mr. Clode), presided, and introduced the object of the meeting. He then introduced,—

The Hon. and Rev. Samuel Best, who described, at considerable length, the means which had been taken by the Hants and Wilts Educational Society, a kindred institution.

He said they had procured a large stock of geological drawings and diagrams illustrative of geology, anatomy, mechanical powers, &c. About 150*l.* had been expended on drawings, models, and books, although they had not as many of the latter as they could have wished. The next thing was to secure the service of lecturers. About eighteen gentlemen lectured for the last year, and this year they had about thirty-five lecturers, while the number of lectures would be between 160 and 200. The operations of the society had, in the first instance, been confined to four parishes in the north-west of Hants. Then they took in the whole of the county, and eventually, Wiltshire. All this had been accomplished within two years. With a view of creating an interest in the proceedings of the society among as many people and in as many districts as possible, they held their meetings alternately in Winchester, Salisbury, and Southampton. Books they were enabled to obtain at a reduction of twenty-five or thirty per cent. The institution was perfectly unsectarian in its character. Their great object was to promote the education of adults. They had divided the work among three secretaries,—one attended to purchases, &c. of books, another to the reading-rooms, and a third to the arrangements connected with lectures. Thus they had invaded some of the rural districts, in which ignorance prevailed to as great an extent as the warmest friends of ignorance could desire. Some people might think such proceedings pregnant with evil. What a shocking thing it was to teach a nursemaid, who took charge of their children, to speak good grammar! Those children might, at some inopportune moment, bring out some awkward expression which had been taught them in the nursery. What a heinous offence it was to enable ploughboys to understand the principles upon which the steam-engine or a thrashing-machine, which he would be called upon to work, was constructed! If they stopped the impartation of education at ten or twelve years of age, it would be impossible to teach such "common things" as common sense required.

Mr. Godwin said, the importance he attached to the object prevented him from declining the invitation sent him. Many persons would attend a library to read books who could not be induced to join a class in a mechanics' institution, or regularly to attend lectures. In this respect he believed that the amended Act of the last session, with the view of enabling towns to establish museums and libraries, would prove to be a great boon. To increase the facilities of obtaining good books was of the utmost importance. Books, as Wordsworth says, are,—

> "A substantial world, both pure and good:
> Round these, with tendrils strong as flesh and blood,
> Our pastime and our happiness will grow."

The opportunities which these libraries would afford children who had been brought up in our national and other schools, to read, would be the means of enabling them to preserve what they had learnt, and to perfect their education. It was never intended that man should devote all his powers to the maintenance of his animal existence only. Although it was necessary man should work to live, it was not intended he should live merely to work. The progress of events greatly tended to shorten the hours of labour, so that man might be enabled to devote his time to mental improvement and the benefit of his fellow men. After alluding to the wonderful progress which this age has made in science, to photography, which enabled the countenances of those who were so bravely fighting our battles in the Crimea to be handed down to posterity, to the still more wonderful invention of the electric telegraph, by means of which the directors of the East-India Company in London could, in an incredibly short space of time, communicate with the millions of inhabitants peopling

that vast empire, the speaker proceeded to observe that it was the fashion among some people to despise the theorist, and talk contemptuously of his projects; they said that they wanted "practical men." The practical man was to be admired, but he would not, on that account, say that "the thinker"—the theorist—did not produce an equal amount of benefit to the community. All these mighty projects—these conquests of mind—to which he had referred, a very few years ago were simply "dim obscure thoughts" in the minds of men who would be deemed mere theorists. They thought and pondered, and laboured hard to perfect these wonderful inventions, and having perfected them, thousands of practical men employed their powers to carry them out. The mere practical man could make no progress without the theorist, who could aid him in the application of his practice for the benefit of his fellow men. It had been argued by some that Bacon had never given expression to the sentiment 'Knowledge is power;' but whether he had used it or not, its truth, to a great extent, could not be controverted. Look at the simple question of the preservation of health. What lamentable ignorance and indifference prevailed in reference to it. Science pointed out the way to remove the causes of poverty, crime, disease, and death. Knowledge here was power over life and death. The public had only lately begun to appreciate the fact that drainage and pavement in a town would save hundreds of lives annually. He would venture to say that to drain and pave is to raise and save. It was better that the state should expend large sums of money to educate the people in these matters than to expend them on gaols and policemen. It was not only the interest, but the duty of the state to educate the people.

Mr. Charles Knight said forty years ago, as a young man, he had, in conjunction with his revered father, attempted the establishment of a newspaper in this borough. That journal still existed, and he was glad to state that it was carried on in a highly honourable and creditable manner. He looked back to that period and compared it with the present. That comparison afforded a striking illustration of the advancement of knowledge and the progress of the community, although at that time the success attending his efforts were as great as could be expected from the then condition of society. After some further observations, Mr. Knight remarked that he noticed the presence of one respected gentleman (Mr. Bedborough), a former fellow-townsman, who could well remember the period of the Peninsular War, and the extraordinary excitement with which it convulsed society. At that time people did not celebrate their rejoicings in quite so moderate a manner as those of the present generation. Notwithstanding the great interest excited in the minds of the middle and upper classes at that eventful period, the mind of the agricultural labourer appeared to be almost unmoved by what was passing around him. He was glad to observe that some vigorous efforts were being made to improve this class. He had not the advantage of living long in the country, but he was sorry to learn that in many districts—indeed, there were very few exceptions—the only place of resort which this class had, after the day's labour, was the beer-shop. No doubt could be entertained on the point that that was about the worst school he could have. The object of societies similar to that they were assembled to promote was to provide him with means of recreation, amusement, and instruction, in lieu of the beer-shop. The great improvement which had taken place was in a great measure due to the newspaper press. He knew of no more powerful engine for the diffusion of knowledge. Some people thought that the agricultural labourer had no business to meddle with such things. Why, they were the very people called forth, by means of voluntary enlistment, to go out and fight the battles of the country, and to suppose that feelings of honour, patriotism, and glory could be promoted in his mind, and kindled in his breast without reading the newspaper, was, in his opinion, absurd. Let him, therefore, read the newspapers: let this be aided by lectures on interesting topics, illustrated by such diagrams as they saw in that room: let him have access to a library, and the agricultural labourer would make strides in advancement almost beyond what they could now contemplate. The fear that the people would be elevated above their own rank, and that they would be discontented with their positions, was rapidly passing away. He would say, let them do their best to develop talent among all classes. Let all have an opportunity to learn. That was not the object of the formation of societies of this character: it was not to be expected they could convert people into great poets or wise statesmen. They did not attempt to make "village Hampdens" or "glorious Miltons." True genius would develop itself wherever found, but their object was, in addition to producing "a bold peasantry, their country's pride," to have also an "intelligent peasantry," which would be the source of still greater pride.

The Rev. Mr. Tooke next addressed the meeting, and entered into a variety of details with reference to the initiatory proceedings taken in the establishment of the Berks and Bucks Society. The general objects to be obtained, as described by the rev. gentleman, were similar to those detailed by Mr. Best in his description of the Hants and Wilts Institution.

The Rev. Mr. Bent, the Hon. and Rev. Lord W. Russell, and the Very Rev. the Dean of Windsor, also spoke briefly in furtherance of the Association; and some votes of thanks having been passed, the meeting separated.

The exertions of the Rev. Edward Hale, as hon. sec. should not be passed over without mention.

BELLE-ISLAND, ISLINGTON.

In all inquiries into the sanitary condition of the metropolis, the enormous increase in the population must be always borne in mind. We cannot go on in the old fashion with nearly more than two and a half millions of people packed in a limited space. Science has put into our hands various means to meet the requirements which the altered state of the population has caused. It is really difficult to be patient with persons who, in spite of common sense and the opinions of thousands, will persist in saying that we must not do what is right. It has been our object on all occasions to get at the truth. We have heard the tales of the suffering poor, and have weighed the value of that evidence with others. It is painful to do what may in any way damage individual interests, but a duty we owe to the bulk of the community forbids the consideration of this.

We have recently made some fresh inquiries in connection with *Belle-Island*,—a place so wrongly named,—and will for the present mention a few facts.

On this spot thirty gentlemen are engaged in various trades,—such as soap-boiling, and the manufacture of artificial guano. There is on the island a population of 320 persons, or nearly that number of men, women, and children, while towards the east there live closely adjoining 60,000 people. In other directions there are masses of persons, and much valuable property, who are injured by the doings in the "island."

The manufacturers there say that all their works are perfectly wholesome: the surrounding people are of a very different opinion. It is difficult to give an idea of the extent of the nuisance. On all sides we hear: "It is shocking;" "Why should we be poisoned, when we pay rent and parish rates?" "It is worst when most people are asleep: why should we be poisoned in our beds?" "It is of very little use shutting the windows." Strangers who come into the neighbourhood often exclaim against the odour. "I have lost some of my best tenants," says a neighbour: "they cannot put up with it, and others have given notice to quit;" and then one chimes in, "Yes, but you should get up about 3 o'clock in the morning: they are artful."

Some of the inhabitants of the island, and the manufacturers, are the only persons who say a word in defence of the present occupation of this neighbourhood. The greater part of the 320 people are engaged in the various works, and "Where in the world can I go with these little children," says one of them. "On one occasion such a smell came out of that place that we went out and cried 'Shame!'" The thousands of persons surrounding Belle-Island say "Shame!" At a meeting of the inhabitants on this subject, a gentleman connected with the parish stated that about twenty-five or thirty years ago an action was brought against a varnish manufacturer of Belle-Island. The judgment was that the circumstance of the pollution of the air by any unpleasant smell was an offence. It would seem, however, that the law is not effective, for though vigorous steps have been taken in Islington, they are at present without effect. Something surely should be done to relieve this crowded and increasing neighbourhood.

Thames Tunnel.—The amount of tolls for the week ending 29th September, 1855, was 68*l.* 8s. 3d. derived from 16,419 passengers.

NUMBER 21, FLEET-STREET.

There is an advantage attending the use of the material of which the houses in London are generally built, which is useful in its way to this extent, that when they begin to give such evident symptoms of decay that there is no gainsaying the fact,—there is nothing for it but to consign them to the professional house-breaker, carefully remove them, and make room for a new creation adapted to the wants and requirements of the present day,—an advantage not afforded by those cities that seem built as if they would endure for ever, and gradually become more interesting to the archæologist than the sanitary reformer. The premises that formerly occupied the site of the building we illustrate this week, on the 14th of September, 1853, owing to some alterations in the house adjoining, gave such hints of their intention to give up by settling down, that the district surveyor was sent for in a great hurry, which led to a call for shores and hoarding, the result of all which was a clearance, and the letting of the site for a term of 80 years to the Directors of the London and Provincial Law Assurance Society, at a ground-rent of 84*l.* per annum. The frontage next Fleet-street is only 18 feet from centre to centre of party-wall, which would give the letting as at the rate of 4*l.* 13s. 4d. per foot of lineal frontage, or, the depth being about an average of 110 feet, at the rate of 1,341*l.* per acre per annum,—one more proof of the great value of sites within the City when they abut upon the leading thoroughfares.

The Directors having approved of the design and plans of their architect, Mr. John Shaw, of Christ's Hospital, called for tenders for the erection of their new premises. The result showed, in a select competition, Messrs. Locke and Nesham the lowest, at 4,988*l.* The Directors used a wise discretion, and adopted stone as the facing material,—that from Swanage, in the Isle of Purbeck, a stone which has good reputation.

The character of the architecture, as will be perceived, is Italian, of the Palladian school, and by the treatment of the return flanks of the party-walls, an extension of front is obtained, not to be expected from the limited space at the architect's disposal. A strongly marked rustic basement raises the ground-floor four steps from the pavement, and a Tuscan rusticated order of lighter cast than the basement, with an archivolt, gives elevation to the story required for the public offices. The first floor is Doric, the second Ionic; and this floor, which is the drawing-room of the resident manager, is marked by a balcony, having carved trusses and ornamental iron railing. Another feature on this floor is the oval windows, with droops of flowers. The top floor is Corinthian in its order, the line of the caps being filled in with masks and festoons of flowers. The attic floor being thrown back, is not visible from the street. The elevation finishes with the attic of the order having vases over the pilasters at the level of that floor.

In the arrangement of the plan care was required, the clear space between the walls being only 16 feet 6 inches. Entrance to the private residence of the manager would have fatally cut up the public office. This entrance is therefore carried under the office in an arched passage, lit in compartments from the floor above, and leads to a stone staircase in the rear, which gives access to the upper floors. The public office, which is 16 feet 6 inches wide, 23 feet long, and 15 feet high, has its walls and ceiling panelled in Parian cement. The manager's room is immediately behind the public office, having a private door from the staircase already mentioned, and also a communication with the corridor leading to the board-room, which is also arched and divided by pilasters into compartments. The board-room, with a physician's room and a lavatory, cover the remainder of the site, so that all the ground-plot is built over. The board-room is 36 feet long and 15 feet high. It is divided into three parts by Ionic pilasters, and the walls and ceiling are panelled in Parian. Light is introduced through ground-glass plates, which fill the ceiling panels.

LONDON AND PROVINCIAL LAW LIFE ASSURANCE COMPANY, FLEET-STREET.—Mr. John Shaw, Architect.

CHURCH-BUILDING NEWS.

Croydon.—An east window of stained glass has recently been placed in St. Peter's Church, Croydon. The work was executed by Mr. William Holland, of Warwick. The window is in the Decorated style. The five bottom lights contain figures of the Evangelists, St. Matthew, St. Mark, St. Luke, and St. John, standing under decorated canopies; and the centre light St. Peter, to whom the church is dedicated. Underneath each figure are their respective emblems, with an inscription in Latin. The openings are in tracery, with angels bearing scrolls, playing upon musical instruments, &c.

Easthothly.—The exterior of the new church here is approaching completion, the rafters being affixed ready to receive the roofing; and the interior is in a state of forwardness at Messrs. Cheale's workshops at Uckfield. Mr. Cheale is the architect. It is at last decided to remove the remainder of the old chancel.

Windsor.—The local *Express*, in reference to new churches in the neighbourhood, states that active exertions are being made by the vicars of Datchet, Egham, and Ashford (near Staines), to obtain the necessary funds for the erection of new churches in their respective parishes. At Datchet and Ashford it is proposed to replace the present structures with larger edifices. At Egham, an additional church at Englefield-green is contemplated, towards which the sum of 1,100*l.* has already been raised by the Rev. J. B. Monsell. Her Majesty has contributed 100*l.* towards the proposed church at Datchet.

Aylesbury.—A second painted window, the gift of Mr. Z. D. Hunt, has been placed in the north chapel of the parish church of Aylesbury. The centre figure represents St. John the Baptist, with a lamb at his feet, and a cross in his hand, pointing upwards to the motto "Behold the Lamb of God," &c. On the sides of the motto are the Greek letters Alpha and Omega, and on the sides of the principal figure, in ancient Greek characters, are the monographs, representing the names of our Saviour, "Iesous" and "Christos." The artist was Mr. J. G. Waller. The new window now being erected in the chancel will be completed in October. It will be of painted glass.

Buttermere (Wilts).—The parish church having become very dilapidated, it was resolved to take down and rebuild the same on a more extended site, and the new church is in course of erection. The nave and chancel are under one roof, with a wooden bell-cot at the intersection. The style is Geometrical Decorated. The builder is Mr. Salisbury, of Newbury, and the architect, Mr. Withers, of London.

Weston-super-Mare.—On Wednesday before last Lord Auckland, Bishop of Bath and Wells, consecrated the new edifice called Christ Church, situate on Montpelier, in this parish. The church is in the Gothic style, from designs by Messrs. Manners and Gill, of Bath, and is capable of accommodating 525 persons, including 250 free sittings. Mr. E. Gregory was the builder.

Bristol.—It appears that owing to a pressure of circumstances, the annual meeting of the Canynge's Society, which for some years past has been a means of directing special attention to the slowly-progressing renovation of St. Mary Redcliffe church, will not take place this year. The architect has addressed a letter to the Restoration Committee, wherein he says,—"I think it my duty to remind you, and through you the public, of the dilapidated, and, indeed, dangerous state of the structure. I have cried 'Wolf!' several times, and accident has not followed, but it must not thence be concluded that no danger threatened or threatens. The flying buttresses on the south side of the nave and some of the windows are in so bad a condition, that although they *may* continue for some time yet to hang together, parts might, on the other hand, fall at any moment. Of the state of the turrets at the foot of the spire I have already spoken on more than one occasion, and this is now even worse than it was. One of the small shafts in the front of the south porch fell a few days ago: had this happened while the congregation were leaving the church, serious consequences might have been the result. The prosecution of the work on which the committee are engaged is not simply a matter of taste and feeling: it does not afford a question which the friends and opponents of restoration generally might discuss; but is a matter of absolute necessity, about which no time should be lost." He adds,—"We have cleared away the temporary screen from the south transept, so that what we have been doing recently may now be seen, including the Ladies' Window. I have reason to think that the latter will be considered, by all, creditable, alike to the liberality of the donors and the skill of the glass painter."

Bath.—It has been determined that an obelisk shall be erected in the Abbey Cemetery at Lyncombe, to perpetuate the memories of the officers connected with Bath who have fallen in active service during the present war. The site of the intended monument is considered eligible, and has been given by the rector and churchwardens, who have likewise relinquished payment of all fees otherwise attached to such an erection.

Blackburn.—St. Alban's Roman Catholic Chapel has recently undergone a revivification internally. It has been painted and decorated, under the directions of Mr. Ellwood, of Blackburn, and Mr. Austin, of Liverpool. Four figures have been added to the number wherewith the walls of the chapel are decorated: they were painted by Mr. Austin from some German designs. The subjects are,—St. Alban, Our Saviour knocking at the door, "Our Lady of Sorrows," and "Our Saviour crowned." There are also three figures in the dome, by Mr. Austin. The cost of the decorations is about 165*l.*——At a late meeting of the Burial Board, Mr. R. Ibbotson's tender for the construction of the fence walls at the projected cemetery was accepted.

Carlisle.—The foundation-stone of a new Presbyterian Church, in Fisher-street, was laid last week. The old building was pulled down a few weeks ago. The new building will be in the Norman style of architecture, and will occupy the site of the former structure. It is intended to accommodate between 600 and 700 persons, and will have a school-room beneath. Mr. Stewart is the architect, and the work has been contracted for by Mr. T. Jones, builder.

Gateshead.—The parish church of St. Mary, Gateshead, which, by the memorable explosion of the 6th October, 1854, was sorely rent and shattered, has since been restored, under the direction of Mr. Dobson, of Newcastle, architect. The sash windows, and other barbarities, says the local *Observer*, have disappeared, and the venerable pile has reassumed its ecclesiastical aspect. The uncouth tower of the eighteenth century remains, serving as a foil to the church; and there are other excrescences—but not so obtrusive. The contractors were Messrs. Kyle. 1,127*l.* 9s. covered the work comprised by the original contract. But there are extras. In the progress of the works, the S.W. angle of the transept was found to be much decayed and shaken, and required to be taken down. The under-part, too, of the chancel wall, which was to have remained intact, proved to be defective; and when it was removed, the discovery was made that it was built on the surface; so that foundations had to be laid before the wall could be rebuilt. A memorial window was projected, to commemorate the necessity of the restoration; and one of the townsmen having offered 50*l.* towards Mr. Wailes's charges, the window was ordered, in reliance on the readiness of the community to defray the cost. Thus there must yet be raised some 200*l.* or 300*l.* to defray the cost of the extras.

Glasgow.—The repairs and alterations in the Glasgow Cathedral are now nearly completed, and a great change has been effected in the appearance of its interior. The organ screen, or gallery, says the local *Gazette*, is a great obstruction to the view from east to west, and though a comparatively recent erection, it has no chance to be removed; but the walls, pillars, and roof having been all cleaned and refitted, where that was necessary, present an appearance such as no other building now existing in Scotland can exhibit.

THE LINCOLN DIOCESAN ARCHITECTURAL SOCIETY.

The autumnal meeting of this society was held at Newark, on September 24th, Sir Charles Anderson taking the chair.

The Rev. J. F. Dimock read a paper on the documentary history of the fine parish church of this town, and Mr. G. Gilbert Scott followed with the architectural history; the two papers mutually illustrating each other. The party then adjourned to the ruins of the castle, built by Alexander, Bishop of Lincoln, in the twelfth century, and the scene of the death of King John. They afterwards went to the church, where Mr. Scott, who has recently directed its restoration, gave a peripatetic lecture on its architecture. Almost every style was illustrated by one portion or other of the fabric. The crypt, and some portion of two piers in the centre of the church, were contributed by the period of transition from the Norman. The Early English gave the lower portion of the tower; the Decorated, the upper portion, the lofty spire, and the south aisle of the nave, with some fragments at the east end. Then came the Perpendicular, furnishing the spacious chancel with its aisles, and also the nave and its north aisle; and at the period of the Tudors giving the transepts.

In the evening, another meeting was held; and Mr. Bailey, architect, read a paper on some of the churches of the neighbourhood, which was illustrated by drawings: these were presented by him to the society. Sir Charles Anderson then read some observations on cottage architecture, which elicited from Mr. P. Thompson, the historian of Boston, an offer of 5*l.* for the best plan of a cottage that should combine economy in construction with the accommodation requisite for a family. Mr. Scott afterwards read some remarks on the present state of our domestic architecture.

On the following day, an excursion was made to some of the churches of the neighbourhood,—Balderton, with its well-known Norman porch, and carved bench ends, and Claypole, with its fine tower and spire, and its Decorated foliage round the capitals of the piers. The font is much like the one at Heckington. In the sacristy is the original stone altar. Pity that this church should not be better cared for. The reading-pew is on low wheels, with a view to its being moved to the north or south side of the aisle, according as the rector of the north or south mediety officiated. The next church visited was Doddington, whose tower and broach spire appear toppling to the ground. Then came Westborough, Bennington, and Staunton; the last recently restored, but not in the most satisfactory manner. The excursion terminated with Hawton, where Mr. Place, whose drawings of the sedilia and Easter sepulchre have rendered them well known to the architectural world, gave the party an exposition of the beauties of the Hawton chancel.

PROVINCIAL NEWS.

Lynn.—The New Assembly-rooms here were opened on Wednesday before last by a grand concert, under the patronage of Sir S. M. and Lady Peto. The room thus opened for public purposes is situate in Crown-street, and occupies the site of the old theatre, a part of the walls of which, through the arrangement of the architect, Mr. Glover, have been worked up into the present building. The concert-room is approached by a hall having on the left a committee-room, and on the right a room for the clerk to the magistrates. The room is 50 feet long, by 26 broad, and 16 high.

Cambridge.—The Working Men's College is being formed at the rear of the premises at Market-hill. It consists of a suite of three class-rooms, separated, or rather united by folding-doors, and forming, when opened up, one large hall, or lecture-room, capable of accommodating 200 persons. Ventilation and warming have been attended to, and the college will shortly be opened with evening classes.

Bristol.—A meeting to promote the establishment of day schools in connection with the Wesleyan body, was held in this city on Tuesday before last. From a report which was read to the meeting, it appeared that a few

months ago, a committee was appointed to look out for a site on which to erect the proposed schools, and that an eligible one had been fixed upon, which will cost 1,100*l.* It was proposed to provide suitable accommodation for 400 boys and girls, and 200 infants, with class-rooms, playground, and a house for the master. The total cost was estimated at 3,500*l.* Nearly 1,130*l.* had been promised, and a grant of 1,200*l.* was expected from Government, but the latter depended entirely upon the whole of the cost, with the exception of that sum, being previously obtained. Resolutions in favour of further procedure in the matter were unanimously passed, and a list of the subscriptions already obtained was read to the meeting.——The firm of Messrs. Jones and Co. have completed their building in Wine-street. The front elevation is in the Early Venetian style at the period when it was advancing towards the Palladian school of architecture. It is 50 feet long and 50 feet high, and consists of bronze and plate-glass fronts 16 feet high, two stories of columned arcades above, built of Bath stone, brick, and glass, and finished by a panelled attic story, the panels in which give light and ventilation to the rooms behind the parapet. The shop, from front to rear 100 feet, having galleries around, and the area of the floor, exceeds 12,000 square feet, exclusive of those floors to be used for domestic purposes, and which embrace various recent improvements, having shower and slipper baths, reading-rooms and lifts. Upwards of 3,500 feet of glass, 100,000 feet of deal, 5,000 feet of mahogany, and many tons of iron, have been used in the construction of the building, and it will be lighted by 320 gas lamps. It will afford accommodation for more than seventy persons, employed by the firm. The architectural plans for the building were drawn out by Messrs. Pope, Bindon, and Clarke. The masonry was executed by Mr. Lee; plastering and painting by Mr. Dimond; carpentering by Mr. Brooks; glazing by Mr. Williams; iron work by Mr. Allen; plumber's work by Mr. Tuckey; and gas fitting by Mr. Harris.

Bath.—The improvement of the Bath Corn-market was prayed for in May last, in a memorial presented to the Town-council, and signed by 137 farmers and others attending the market. The subject was referred to a special committee, who obtained the sanction of the council to expend 1,000*l.* in enlarging the corn sheds, or erecting a new building. It was resolved that a new corn loft should be erected. The contracts were let to Messrs. Morgan and Lovell, joiners and builders, and the work is now advancing towards completion. The site of this new corn-loft is on the left-hand side of the market, where the sheds for exhibiting corn formerly stood. The building will be 167 feet long, and 18 feet wide. It will have an entrance into Walcot-street. At one end, nearest Walcot-street, will be a separate room, 16 feet by 22 feet, appropriated for the exhibition of small seeds. The interior will be lighted by twenty-seven casements, extending the whole length on each side, and further light will be admitted by filling in the space under the eaves of the roof with glass. Ventilation will be secured by perforated zinc plates inserted in the roof, and, to keep out cold, a coating of air-felt will extend along the roof between the slates and the boarding. The roof in the interior will be quite open and constructed of stained wood.——A project for a hot-water fountain in the Abbey churchyard has been sanctioned by the City Act Committee, and by the house-owners and occupiers of the neighbourhood, and the architects of the city are to be written to for designs for the proposed erection.

Priddy.—The first school-house ever erected in this small rural parish was opened on Friday before last by the bishop of the diocese.

Halifax.—One of the tallest chimneys in this neighbourhood has just been completed at Deanclough. It is an octagon shaft with a square base, each side of the base measuring 21 feet. It gradually tapers off, so that the diameter at the top is reduced to 10 feet 6 inches. The flue is cylindrical, of equal dimensions throughout, that is, 11 feet in diameter. Its height is 264 feet 6 inches, and the ornamental ashlar work at the top weighs 70 tons 9 cwt.

Sunderland.—The friends of temperance in Sunderland are making an effort to raise a sufficient fund to erect a public hall in the town. Lord Shaftesbury and Lady Williamson are among the contributors.——A vigorous attempt is now in progress to raise 7,000*l.* by voluntary subscriptions, for the purpose of erecting the talked of "Crystal Palace" on Building-hill. Ward sub committees are being formed, and are said to be meeting with encouraging support from all classes. A public meeting of the inhabitants has been held to give countenance to the project, and it has been received, it appears, with general favour. Upwards of 2,000*l.* were subscribed up to Thursday week, of which the Dowager Marchioness of Londonderry contributed 100*l.*

Blyth.—The harbour works here are being prosecuted with vigour. A large portion of the eastern pier has been commenced, and the river is being dredged. On the sea-banks, near Bathrow, yards have been erected for storing goods, and for blacksmiths' and joiners' shops. It is expected that the western pier will soon be completed.

Jarrow.—The Commercial Docks of the Tyne at Jarrow and Hayhole, on Jarrow Slake, are making rapid progress. The contractors have a large number of men engaged making the approaches, and the locally well-known gibbet, "upon which Jobling was hanged," will soon be levelled to the ground. Embankments are being thrown up previous to the piling for the river wall, which will be forthwith commenced. The contractors have purchased a powerful Nasmyth engine, which will give seventy strokes a minute, and will also drive vertical and angular piles, and make its own road as it goes. The Brinkburn will be taken outside the dock by a covered way, and will be discharged into the Don. There will be at least a dozen approaches from the North-Eastern Railway to the Dock, and the warehouses will be on a large scale. The Hayhole Docks, opposite to Jarrow, are also making progress. More men have to be immediately set to work.

Gateshead.—The corporation of Gateshead have resolved to purchase the property in Hillgate required for the town improvements, to carry out which they further propose to apply to the Exchequer for a loan of 35,000*l.*

Linlithgow.—The improvements upon the park and loch at Linlithgow Palace, according to the *Falkirk Herald*, are now complete. The authorities have now turned their attention to the court-yard of the palace.

THE SMOKE NUISANCE IN THE COUNTRY.

IRON WORKS.

The *Builder* did good service by the efficient assistance it rendered to the abatement of the great Smoke Nuisance in London. The compulsory application of the Act of Parliament has sensibly purified the air, and turned to profitable use countless tons of disintegrated fuel, which (but for its wholesome vigour) would now load the lungs, obstruct the vision, besmear the skin, and begrime the furniture of the inhabitants of the metropolis. So far, so good. An inestimable benefit has been secured; but I must entreat you not to lay down your pen, or to rest satisfied with the partial appliances of a remedy which ought to be universal. "We have scotched the snake, not killed it;" but what has been done in London is certainly feasible elsewhere. In Manchester, Bradford, the Potteries, and other places, the public spirit of individual manufacturers has done enough to establish the practicability of ridding them of the foul pest, but not enough to effect a perceptible diminution of its black and filthy influence, —*that*, nothing but a legal compulsion will ever accomplish, for England is, of all countries in the world, the most pertinacious in her resistance to every scheme, however advantageous, which disturbs the routine of ancient practice. The experiment has been successfully tried in London. In the name of health, cleanliness, and the once fair aspect of this pleasant land, extend it to the provinces!

I make this exhortation as a unit of the general public. How far it may tend to the benefit of my particular case must depend upon the answer, which I hope through your medium to obtain, to the question with which I shall conclude my letter.

I inhabit a midland district, which, notwithstanding its mineral substratum, was, much within my memory, in every sense rural,—green, richly wooded, and blessed with a clear pure atmosphere. The rapid development of its mineral resources in recent years has created and multiplied iron furnaces and iron forges, tall chimneys and coke ovens. Do not suppose me so absurd as to complain that these subterranean riches are not kept locked up in the bowels of the earth. It is quite right, as well as an inevitable necessity, that they should be extracted, converted, and made to minister to individual and national wealth; but if it be a fact that such legitimate objects be achieveable without a hideous desolation, then it is most reasonable to complain of, and seek to arrest, the process by which a beautiful country is being needlessly changed into a dismal sooty wilderness, where the sun is blotted out of Heaven, all vegetation blighted, and every fine old tree converted into a black, withered, leafless skeleton. I have reason to believe that more than one of the proprietors of the works and forges in the neighbourhood would willingly incur any (not unreasonable) expense to stay the plague, if they could be satisfied of the existence of any effectual method of doing so. The question, therefore, which I would address to you,—and you have correspondents whose practical science might enable them to impart the desired information,—is this:—

Is there any peculiarity in the construction of smelting, refining, or puddling furnaces, or of *any* used in the manufacture of iron, which renders the several patented inventions for the consumption of smoke (all are modifications of the same principle) inapplicable to them? or has any one—and which—of these patents been successfully applied to any known ironwork?

One more query. Are the ovens of a brick-kiln within the saving help of such appliances?

A. B. C.

A COLLEGE FOR ARCHITECTURAL DIPLOMAS.

Many years since Mr. Bartholomew strove earnestly in the *Builder* to awaken the profession, to arouse the Institute, and to arrange means whereby diplomas might be not only granted—as by a chartered body—but that without the possession of which it would be *criminal* for any one to pursue the practice or calling of architect. The view taken of the subject by Mr. B. was, I think, a rational one, though his machinery might have been too complicated, and the restrictions too severe. Without a college in which a certain course of education is pursued, but little can be effected. Of what value would be the medical diploma were there no distinct branches of study, at the colleges of Dublin, London, Edinburgh, &c. whereby a thorough training could be effected before the student entered the surgery or walked the hospitals? How could he be prepared for the struggles of after life, if left solely to the information and tutelage to be derived from the majority of the profession? He might leave with a mind stored perhaps with dogmas,—but without that vehicle, practice, by which alone that knowledge can be adapted to the various cases, and rendered of their full value.

Witness the hundreds who are yearly turned out as "finished," from various offices. Finished! indeed, is the period for which they were articled; but how seldom is the object of that instrument thoroughly effected.

Trained as most young men are—with the narrow and hard-to-be-applied educational course through which too many of them are literally *dragged*,—how can we look for that progress which ought reasonably to be expected from five years at the studio, or, if you will have it so,—the drawing-board? It too frequently happens that a pupil should have as intimate a knowledge of the principles of architecture when he enters an office, as he sometimes possesses when he leaves. And herein, I presume, is the real difficulty we have to surmount. Not that good outsiders should be kept out of the profession, but that those who have entered through the door should be rendered fit for the responsible positions

hich most of them are intended to fill. It is e want of this which has sunk architecture to s present level in the estimation of the world. has also given to those without any other eans of existence an opportunity to christen emselves "architects," and to take their stand such, for with the majority of the public this se metal too frequently passes as the current in.

By such a provision alone can we elevate our rofession. When we find in large letters upon ge spaces of brickwalls, as well as upon cap- rating door and window plates, "Architect d Builder, Surveyor, and General Agent, uctioneer and Appraiser. N.B. Rents col- cted," surely it is high time for us to act. et us do this, and speedily. Let us memo- alise her most gracious Majesty for a charter enable us to found a college, duly furnished ith the necessary professors' chairs, and recog- ised professors to fill them, with all the other ceteras that in the working out of the detail ill be found necessary; and that accomplished, et about the issue of diplomas, and obtaining ie sanction of Parliament to the same, so that one can risk the lives or money of the public ithout possessing the knowledge whereby lone that diploma can be obtained.

We should then have our pupils thoroughly repared for office duties, a vast amount of abour (and unnecessary labour) saved the rincipal, and five years of actual practice as ell as study, would then accomplish more than now sometimes effected during the whole of long and comparatively useless life. Vast enefit would also be conferred upon him to hose care the pupil would be entrusted.

Earnestly recommending the question to the onsideration of the Institute, I will for the resent conclude. In the meantime, let Mr. hamberlain test the Architectural Association, nd the professors at large, to whose expression f feeling upon this point, if made, I feel con- inced the council of the Institute will give orce. Let him, therefore, seek for that expres- ion: a memorial to the Institute to act in this natter would, I am sure, receive the warmest upport from nineteen-twentieths of the prac- ising architects in town and country.

W. Wigginton.

SUPPLY OF QUANTITIES BY ARCHITECTS.

In reply to your correspondent's query on this head, I beg to observe that I invariably have the quantities taken out, and insert a charge of 1 per cent. to be paid by the builder, as a matter of course.

I hold that your correspondent was only following the usual course, and if the proprietors did not wish the quantities to be taken out, they should have informed him at the time of making the other arrangements.

As the quantities are paid for by the builder, it cannot be held that the cost of taking them out is included in the sum agreed to be paid for the plans and specifications by the proprietors. J. P. P.

*** Other communications on this subject are unavoidably postponed.

THE OPENING OF THE NEW MUSEUM (PICTURE GALLERY) DRESDEN.

After a protracted labour of several years, and the raised expectation of the whole of Europe, the above new temple of art was opened to the public on the 25th of September. No special opening ceremony took place, being incongruous to such grand sights. What had been predicted before, that no one would recognise the gallery, really was the case,—and an unguessed treasure of art bursts on our eyes. Old paintings, which we were obliged formerly to view with strained eyes, are now to be seen in a clear, wide light of day. The greatest improvement has accrued to the Italian school, which is now exhibited in the broad light of the upper room. The Dutch pictures, however, which are placed in the northerly room, with an exterior and wide light, have not improved much in their position. The finest pictures are exhibited in the middle saloons, which conclude towards the west with an especial piece, containing the Madonna del Siste di Raffaelle. This jewel of pictorial art has been now freed of its plate-glass covering, which lay like a damper between the canvas and the eye. Holbein's Maria, also, the German sample of the Italian Madonna, is exhibited on a separate scaffolding. The whole impression of the first visit to the new Dresden gallery is one of quiet grandeur, and by-and-by one gets accustomed to the expanse and comfort of the new spaces. The gallery will be open every day, except the Saturday; twice in the week at a fee of four groschen (about 4½d.); the other days gratis. It is to be borne in mind that the transfer of these numerous and costly pictures to this new museum was accomplished within the short space of three months.—*From German sources.*

SHORTENING SPOFFORTH CHURCH.

"An Old Member of the Yorkshire Architectural Society" writes us on this subject. He says:—

Your correspondent, "M. R. F." should rather have said "reducing the chancel," as the church at Spofforth is not altered beyond the removal of its modernisations. It is of the twelfth century. Its pillars and arcades remain as constructed, and, where defective, have been restored to the original form. The walls of the church have been rebuilt in harmony with them, and the south-west portal, plain, yet in keeping with many of the early churches of west Yorkshire.

The beautiful chancel of the fifteenth century was unsafe and required renovation, but the cost would preclude it. Doubtless it was built by the Percys, who had a castle near; and in those Catholic days might have been a prelude to a larger church, as it was out of all proportion to the earlier nave.

The chancel is built upon the foundations (recently discovered) of the earlier one, and harmonizes with the body. The tower is good of its kind, but late and overbanded.

Another point to be considered is the sound, which was defective in the larger one; but in the Roman Catholic service this would have mattered little, while in our own it is of the greatest importance.

I am an advocate for perfect restoration of our venerable and beautiful ecclesiastical buildings, yet I must consider their original form and intentions, and also our modern requirements, and not advocate a headlong restitution of alterations and adjuncts, in each variety of style, as though the building were intended for a museum rather than a sacred purpose.

Could ample funds be at all times commanded, believe me, I would have all our churches worked out in the beautiful varieties of the fourteenth century, but, where limited in means, act according to circumstances.

To prevent future cavilling about this church, it would be desirable to remove the indications of the late chancel, which remain eastward of the restoration. In all such cases may we work harmoniously.

LITHOGRAPHS BY PHOTOGRAPHY.

At the recent meeting of the British Association, in the section of Chemical Science, Professor Ramsey described a process by which Mr. Robert M'Pherson, of Rome, had succeeded in obtaining beautiful photo-lithographs—specimens of which had been hung up in the Photographic Exhibition in Buchanan-street. The steps of the process are as follow:—1. Bitumen is dissolved in sulphuric acid, and the solution is poured on an ordinary lithographic stone. The ether quickly evaporates, and leaves a thin coating of bitumen spread uniformly over the stone. This coating is sensitive to light, a discovery made originally by Mr. Niepce, of Chalons. 2. A negative on glass, or waxed paper, is applied to the sensitive coating of bitumen, and exposed to the full rays of the sun for a period longer or shorter according to the intensity of the light, and a faint impression on the bitumen is thus obtained. 3. The stone is now placed in a bath of sulphuric ether, which almost instantaneously dissolves the bitumen which has not been acted upon by light, leaving a delicate picture on the stone, composed of bitumen on which the light has fallen. 4. The stone, after being carefully washed, may be at once placed in the hands of the lithographer, who is to treat it in the ordinary manner with gum and acid, after which proofs may be thrown off by the usual process. Professor Ramsey then proceeded to state that the above process, modified, had been employed with success to etch plates of steel or copper, without the use of the burin. 1. The metal plate is prepared with a coating of bitumen, precisely in the manner noticed above. 2. A positive picture on glass or paper is then applied to the bitumen, and an impression is obtained by exposure to light. 3. The plate is placed in a bath of ether, and the bitumen not acted upon by light is dissolved out. A beautiful negative remains on the plate. 4. The plate is now to be plunged into a galvano-plastic bath, and gilded. The gold adheres to the bare metal that refuses to attach itself to the bitumen. 5. The bitumen is now removed entirely by the action of spirits and gentle heat. The lines of the negative picture are now represented in bare steel or copper, the rest of the plate being covered by a coating of gold. 6. Nitric acid is now applied as in the common etching process. The acid attacks the lines of the picture formed by the bare metal, but will not bite into the gilded surface. A perfect etching is thus obtained.

Miscellanea.

The New Pier at Margate.—Sir: I, for one, as an old inhabitant of Margate, am much obliged by your frank expression as to the appearance of our new pier. You have uttered the opinion, to my certain knowledge, of scores of the inhabitants to whom the pier is a perfect eyesore, and who grieve over their old jetty for the sake of its associations. It is really too bad that in a structure on which so much money has been spent as on this, there should not be one morsel of art, or striving for art, exhibited. A few horizontal beams carried on some groups of iron pipes constitute the pier. It is quite time some one spoke out: this is not the only engineering work which, on the ground mentioned, will make us the scoff of the next generation.—D.

Kilkenny Archæological Society.—The September meeting of the Kilkenny and South-east of Ireland Archæological Society was held at Kilkenny on Wednesday week, the Rev. J. Mease in the chair, when thirteen new members were elected, besides the Dublin Mechanics' Institute, which appears among the list of new members. The secretary read a letter from Mr. S. C. Hall, who had just been elected a member, and also from Mr. Rhind, under like circumstances. Various presentations were made to the library and museum of the society. Mr. W. Hackett, of Middleton, then communicated some observations on Stone Circles in India and in Ireland. Mr. Prim read a paper, giving an interesting account of the discovery of some Ogham stones and other antiquities in the raths of Dunbel, county of Kilkenny, since his previous report of 1852. Two Ogham stones, found in course of excavation, were broken into numerous pieces by the workmen employed, but the pieces were carefully collected, and the Oghams restored, as far as possible. One of them was 5½ feet long and 2 feet wide, tapering to 11½ inches. The other was 6 feet 3½ inches in length and 1 foot 1 inch wide, narrowing to 11 inches where there is a step within 8½ inches of the top, at which point the width decreases to 7½ inches, and again enlarges at the top to 9 inches. The inscriptions were pretty fully restored. The stones were of red or purple sandstone, only obtainable about seven miles distant, at Thomas-town, whence others, previously found in different parts of the same district, appear to have also been got, a circumstance which led Mr. Prim to the conclusion that such stones were carved by some tradesman located at the spot where the sandstone on which the carvings were cut was to be had. Blue limestone is the stone peculiar to the locality where the two described were discovered. Communications were laid before the meeting from the Rev. Samuel Hayman, on the Ecclesiastical Antiquities of Youghal; the Rev. Constantine Cosgrave, on the Hill of Keash; and the Rev. G. H. Reade, on the Round Tower of Inniskeen. Mr. James F. Ferguson, local secretary for Dublin, communicated the first portion of a translation of an Ancient Norman-French Poem descriptive of the Anglo-Norman conquest of Ireland, which has been epitomised by Harris, and published from the original in the British Museum. The committee intend to commence the publication of this interesting contribution to Irish history with the new year.

The Crimean Navvies.—A private letter says: "The immense loads carried by the Turks employed in the transport service perfectly astounded the English navvies. It is no uncommon thing for the Turkish labourer to convey 8 cwt. on a knot on his head three or four miles, and this too with perfect ease."

Increase of Steam Power.—It is said to have been ascertained, by a series of experiments at New York, that opaque steam—that is, steam when it becomes visible by being exposed to the influence of an atmosphere cooler than itself—acquires an increased in place of a diminished power of expansion, which is accounted for by supposing that the expansion of the air on being heated by the steam is greater than the loss of expansion in the steam itself from its being cooled. An engine has been constructed by Mr. Storms with a double acting air-pump, which is enveloped in water to keep the air cool. The water is admitted into the steam-chest just above the valve, where it is admitted immediately after the stroke of the piston has commenced. An engine so constructed, it is said, was found with equal resistance to give per pound of coal used 107 revolutions when steam alone was employed, and 190 when air was combined with the steam, so as to produce the cloud vapour.

The Iron Trade.—The usual meeting preliminary to the quarterly meetings of the Staffordshire and Worcestershire ironmasters was held on 28th ult. when strong endeavours were made to induce a rise of 40s. a ton, which, as designed, led to a sort of compromise, by an agreement of the less speculative amongst the masters to recognise a nominal rise of 20s. a ton. This by no means settles even the mere nominal price, for it may be remembered that a strange shuffle occurred at a recent quarterly dictum, when some were bent on taking the rise,—not from any specific sum previously declared by the combination, but from any alleged price which might have been forced up in the interval by others, or individually by some of the masters. Accordingly, while the new price is declared by the more moderate authorities to be 9*l.* for bars, the more reckless and gambling "parties" coolly quote the decision to be 10*l.* for bars, while pretending to blame the "small masters" as "undersellers" who desired to raise the price another pound, or to 11*l.* for bars!! What respect are "authorities" such as these entitled to by the really respectable portion of this extraordinary "trade?" An advance having thus meanwhile been declared, the puddlers and other workmen are already in for a share of the plunder, and perhaps nothing will tend so much to compel moderation and steady conduct as a thorn such as this in the sides of the trade combination.——The ironmasters of Cleveland and the surrounding district, we hear, have formed themselves into a combination also, and hold their meetings once a month at the Talbot Inn, Middlesbro', where they settle the price of iron and concert measures to promote the iron trade of the district.

Building and other Accidents.—A joiner, employed in the erection of the Blackburn Townhall, met with injuries on Friday in last week, which resulted in his death, a short time afterwards. He was working near the roof, and the plank upon which he was standing gave way, so that he was cast upon the floor of the next room, a descent of 12 yards.——Part of the Oakengates Tunnel, on the Shrewsbury and Birmingham line, fell in on Wednesday before last. It appears that close to the wall of the tunnel is an old pit shaft, which had never been filled up, except the upper portion; a platform having been constructed about 18 feet from the surface. Under this platform, the pit shaft was generally full of water, but this having been exhausted in some way, the platform gave way, and the water of the canal, which flows close by the spot, rushed in with such force as to burst in the wall of the tunnel. The breach made was about a yard square; and the line was inundated, as also were some of the houses in Oakengates.——The Bullo Pill Railway Station, on the South Wales Railway, about 12 miles from Gloucester, has been totally destroyed by fire.——A company is in progress of formation for carrying out the several inventions of Mr. G. H. Ingall, for preventing every class of railway accident it is possible to have control over. The association will be called the "Railway Accidents Prevention Company."——A balcony at Milan gave way on 17th ult. and twenty-five persons were precipitated from it into the street. Two of them died the same day, and the others were dangerously injured.

Experiments with Electric and other Lights.—Experiments took place on the upper part of the Common at Woolwich, in the presence of a select committee, on Monday in last week, when three different kinds of lights, for war and other purposes, were tested. The first was the electric light, which was exhibited by Mr. Inglis; the second the "Drummond Light," exhibited by Sergeant R. P. Jones, of the Royal Sappers and Miners; and the third the "Bude Light," of Mr. Gurney, who also entrusted it to the care of Sergeant Jones. The electric light is reported to have appeared to possess the power of penetrating farthest into darkness, and was the most brilliant; but the Drummond also possessed some advantages. It was more portable, and could be carried by two or three men, each taking a portion of the apparatus, whereas the electric light required a waggon drawn by two horses to convey it from place to place.

Fire-Bricks.—Mr George Noble, of Pensher, has recently patented an invention, by which it is proposed to do away with manual labour in the manufacture of fire-bricks made from ground clay, by passing it directly from the grinding mill to the machine, where it is made into bricks ready for the kiln, instead of adding water and making it into a paste, according to the present process. This operation will save the expense of drying flats and coals, now used for preparing bricks for the burning kiln, and will prevent any alteration in form of the wet brick by handling. The invention consists of a combination of hydraulic machinery, for compressing clay in a pulverized state into bricks, and for changing the position of the moulds in which the clay is compressed, so that they may fill and discharge themselves after compression.

Screw Propellers.—An improved construction of this important accessory of modern steam navigation has been patented by Messrs. Kenworthy and Greenwood, of Leeds. This improved propeller is constructed in three pieces. By this arrangement the blade, in case of accident, can be refitted, being dovetailed upon the main shaft, upon which it can be set to any required angle; and, being entirely of wrought-iron, less liability of fracture exists. Captain Williams, of the City of Dublin Steam Packet Company's ship, *Windsor*, has also patented improvements in the propeller. This screw revolves in the water "end on," and the inventor claims this as an advantage, on the ground that it has more propelling surface than ordinary screws, combined with a less diameter.

Strike.—The shipwrights lately in the employ of Mr. Colchester, of Ipswich, have struck work, it seems, in consequence of a man being engaged who was not of their fraternity. The men readily obtained employment at other yards in the town, but all efforts then made to obtain hands from a distance to supply the vacancies in Mr. Colchester's yard were ineffectual.

Suffolk Institute of Archæology, &c.—A migratory meeting of this society was held on Friday before last. The members started from Bury St. Edmunds, making Woolpit church their first halting-place. Here they were met by the Rev. L. F. Page (the rector), and Mrs. Page, and a large number of ladies and gentlemen. After an examination of the church, the party assembled were told its history in a paper from Mr. Page. The next spot noted in the order of route was Haughley-park, in which stands a mansion, in the Tudor style, to the whole of which unlimited access was permitted by the Misses Crawford, and after a paper on the "History of Haughley," read by Mr. Tymms, the visitors were indebted to the hospitality of the ladies for luncheon. From thence the company proceeded to Haughley-castle, where they were met by Mr. C. Tyrrell, Sir H. J. Austin, and others. After ascending the lofty mound on which the castle formerly stood, its records were given in a paper from Mr. Tymms, and some lines in reference to the spot, written by the Rev. F. Aldrich, were read. The Rectory, where a variety of interesting objects had been arranged for inspection, was next visited, and then the church. At Stowmarket church, a paper describing its architectural features, with a sketch of its history, was read by Mr. Tymms, and the company then proceeded to inspect the vicarage—which the Rev. Mr. Hollingsworth had thrown open—not omitting a visit to "Milton's Mulberry Tree." Antiquities and curiosities were arranged at the County Court, and were examined prior to summons to dinner at the Assembly-room, where between thirty and forty ladies and gentlemen dined. The chair was occupied by the Rev. Lord Arthur Hervey, the president of the Institute.

City Baths and Washhouses. — Sir James Duke, M.P. is to present, at a Common Council, on Thursday next, the petition from the Guardians of the West London Union to the Corporation, praying for the establishment of Baths and Washhouses in the City.

Lectures on Church Building at Newcastle. —The first of a series of original papers intended to be delivered to the members of the Newcastle Church of England Institute during the winter session, was read by Mr. S. Oswald, architect, on Monday before last, the subject being the rise and progress of church building in England, from the introduction of Christianity, during the Roman occupation, until the Reformation, with notices of the subsequent period. The distinctive peculiarities of the various styles were pointed out in a familiar manner, and illustrated by numerous drawings and references to the churches of Newcastle and the neighbourhood.

"Leaden Pipes in the Supply of Water and Beer."—Having noticed your important article in last Saturday's *Builder*, relative to "leaden pipes in the supply of water and beer," we think it proper to call your attention to the fact, that a patent was taken out on the 19th April, 1853, by Mr. John Chatterton, a talented engineer of Birmingham, for coating gutta-percha tubing with lead. This combination of gutta-percha and lead secures remarkable strength, and at the same time avoids the danger arising from the use of the ordinary leaden pipes. We have much pleasure in handing you a specimen of tubing (made under Mr. Chatterton's patent), which has been subjected to the extraordinary pressure of 600 lbs. on the square inch, without exhibiting any symptoms of giving way.

The Gutta-Percha Co.

*** The specimen referred to appears to be well adapted to the purpose in view. The gutta-percha tube enclosed in the leaden one, though not attached to its interior, is perfectly protected by it, and the inner tube is of considerable thickness.

Metropolitan Gas-fitters' Association.—On Monday, a dinner was held at the George and Blue Boar, Holborn, as a means for getting together the gas fitters of the metropolis and suburbs, for the purpose of revivifying this association, which has been in abeyance for some year or two past. The value of such an association, under the energetic presidency of Dr. Bachhoffner, for disseminating the knowledge of the almost daily progress making in their calling, for obtaining lectures, to be delivered by the best authorities, and for the formation of a library of works more especially referring to the manufacture of gas and its application to domestic uses, must be too clear to the trade to require to be pointed out to them, so that we may now hope to see the matter established on a firm basis.

The Wiltshire Archæological Society.—The members of this society have just had their annual gathering. Among those who attended, were the Marquis of Lansdowne (patron of the society); Messrs. Sotheron, Heneage, Gladstone, Neald, and Scrope, M.P.'s.; Mr. Britton, &c. The Rev. J. Wilkinson, of Broughton-Gifford, read a paper on "Parochial Histories." He suggested that committees of parish historians should be formed in towns, who should divide the work between them; and generally in every parish the clergyman should call in what coadjutors he pleased. All reports of several parishes would be in answer to certain heads of inquiry, and the whole would have to be revised and consolidated by competent editors. To this scheme of parochial history by the parochial clergy, the Bishop of Salisbury had given his warm approval. The whole of Scotland has already been treated in a similar manner, the work occupying from 1831 to 1854, and comprising fifteen imperial octavo volumes. On the last day the members were entertained by the Marquis of Lansdowne, at his lordship's seat at Bowood.

Indigenous Art in South America. — Rio de Janiero. — M. F. Pettrich, a German sculptor, possesses the largest sculpture *ateliers* in the Brazilian metropolis, and is engaged in a great many works for public buildings, and for the rich Brazilians. Amongst the former is a cycle of six figures, life-size, amongst which are the Indian Chief Te-cum-seh dying, and another, Tat-ruh-reh, leaning on a spear. To this belongs a row of basso-relievo, 5 or 6 feet high, representing the history of the North American Indians,—first their primordial state in the forest and the prairie, until their chiefs held council with four State ministers of the United States. M. Pettrich is also engaged in the models of two equestrian statues of the late Emperor Don Pedro I. the one representing him as a young man, the other as he proclaimed the Brazilian constitution on the *Plaza* of Rio de Janeiro.

TENDERS

For enlargement of Anderton's Hotel, Fleet-street Mr. J. H. Stevens, architect. Quantities supplied by Mr. Elliot:—

Little and Sons	£3,450	0	0
Mansfield and Sons	3,387	0	0
W. Sivil	3,270	0	0
Pritchard and Son	3,048	0	0
Ashby and Sons	2,949	0	0
Lawrence and Sons	2,943	0	0
T. Hawker	2,874	0	0
J. Rudkin	2,871	0	0
Brass and Son (accepted)	2,717	0	0

For erecting a pair of semi-detached villas, at Sydenham, for Messrs. Ralph. Quantities furnished by Mr. Roberts:—

Lawrence and Sons	£2,028	0	0
Gammon	1,949	0	0
Patrick and Son	1,878	0	0
Parry and Son	1,784	0	0
Macey	1,770	0	0
Maskill	1,134	0	0

For the erection of schools and teacher's residence for the parish of St. Matthias, Bristol. Mr. Norton, architect:—

Beaven and Son	£1,234	10	0
William Marquiss	1,200	0	0
John King	1,195	0	0
Jas. and Jos. Foster	1,144	0	0
Thomas Brooks (accepted)	1,036	0	0

For the erection of three houses with shops, at St. John's-wood. Mr. William C. Reed, architect:—

H. and R. Holland	£1,998	0	0
R. Ashby and Sons	1,912	0	0
John Salmon	1,695	3	0
R. Thomas	1,600	0	0

The Jewish Hospital, Mile End-road.—We are informed that none of the tenders for this hospital were accepted on 27th ult. there being an explicit understanding with the competitors to that effect.

ADVERTISEMENTS.

METROPOLITAN BUILDINGS ACT.—Office of Metropolitan Buildings, 6, Adelphi-terrace, Strand.—NOTICE—An examination of persons desirous to obtain a CERTIFICATE of qualification for the Office of DISTRICT SURVEYOR, will take place on MONDAY, the 29th day of OCTOBER instant, at ONE o'clock, P.M. Persons desirous to be examined must apply on or before the 27th OCTOBER instant; and the application must be accompanied by a preliminary statement according to the course of examination, prescribed in the Rules for that purpose; copies of which may be had at this Office.
ARTHUR SYMONDS, Registrar of Metropolitan Buildings.

AGENTS WANTED, for the SALE of BATH, PORTLAND, and ROMAN CEMENTS, for the Export Trade, and for any of the large Towns of the United Kingdom. The highest references will be given and required.—Address to A. B. C. care of Mr. W. H. Hayden, 17, Warwick-square, Paternoster-row, London.

CLERK of WORKS.—WANTED, immediately, for a few months, to superintend the completion of a Public Building in a Provincial Town.—Application to be sent to Mr. JAMES MURRAY, Architect, Coventry.

FOREMAN of JOINERS.—WANTED, a working SHOP FOREMAN (a constant job), capable of setting out work for and superintending a few Joiners. Must understand keeping an account of the materials used and the work executed. State where so employed before, age, wages, &c. to E. H. Office of "The Builder."
N.B. A Builder's Spring-cart, Horse, and Harness, wanted.

REQUIRED, a MAN acquainted with the quality and measurement of SAWN TIMBER. Wages, at first, 28s. per week. State age and where last engaged, by letter only, to S. R. 3, Queen's-terrace, Bayswater, London.

SAWING and PLANING-MILLS.—WANTED, a steady MAN, thoroughly competent to work a Planing Machine rotary; also to manage a saw frame and Circular Saw-Bench. Satisfactory references or testimonials required.—Apply, stating terms, to F. J. UTTING, Wisbech.

TO BUILDERS' ASSISTANTS AND DRAUGHTSMEN.
WANTED, by a Builder, a steady, respectable Person, not less than 30 years of age, to ASSIST in the OFFICE DUTIES, in preparing plans, specifications, estimates, bookkeeping, &c. and to be practically acquainted with joiners' work, as he would be expected to see to the carrying out of staircase work, and the construction of the different branches of the business. None need apply unless fully competent to carry out these requirements, and can give satisfactory reference as to honesty, sobriety, and ability. Applications to be made addressed to Mr. STAINTON, Surveyor and Builder, Boston, Lincolnshire, stating salary required, with age and particulars.

TO BUILDERS' FOREMEN.
WANTED, a practical BUILDER'S FOREMAN, thoroughly acquainted with all the several branches of the business.—Address, stating age, particulars, and wages, and where last engaged, to Mr JOHN ELLIOTT, Builder, Darlington street, Wolverhampton.
N B—None need apply but those whose character will bear the strictest investigation.

TO STONEMASONS AND PLASTERERS.
WANTED, TWELVE good hard STONEMASONS and EIGHT PLASTERERS.—Apply to GEORGE M'CANN, Malvern, Worcester.

WANTED immediately, in the Office of a Builder, a competent CLERK, one who is thoroughly competent to undertake the entire management of the Office. He must be a good penman, accurate and expeditious at accounts, and able to take out quantities. Direct, stating salary expected, age, and reference to last employer, G. PARSONAGE, Builder, Cheltenham.

ARCHITECTURAL PUPIL.—WANTED, an ARTICLED PUPIL (now resident) in an Architect's Office in London, of extensive practice and long standing, and holding two public appointments.—Apply (by letter), to A. Z. Mr. Woodwell's, 93, Berner's-street, Oxford-street.

WANTED, a SMITH: a good workman, and steady.—Apply by letter to A. O. care of Messrs. Saunders Brothers, Stationers, &c. 106, London-wall.

TO GAS-FITTERS, STOVE-MAKERS, AND SMITHS' FIREMEN.
WANTED, an experienced and thorough WORKMAN in each of the above branches. The gas-fitter, if really capable of plumber's work, would be preferred. The strictest inquiry will be made as to integrity, sobriety, &c.—Address by letter only, X 98, Margaret-street, Cavendish square.

WANTED, a SITUATION as outdoor or general FOREMAN, or CLERK of WORKS, by the Advertiser, who is thoroughly competent, and can produce good testimonials and references from previous engagements.—Address, E. M. 13, Addington-street, York-road, Lambeth.

TO PLUMBERS.
WANTED, a SITUATION, by a Young Man of respectable connections, who well understands the glazing business and wishes to improve himself in the plumbing.—Apply by letter, post paid, to H. HOLDING, Northampton.

TO STONEMASONS.
WANTED, by the Advertiser, a SITUATION as a GENERAL MASON; has had fifteen years' experience as a letter-cutter and stone and marble carver.—Address, W. S. 6, Evans-street, Upper North-street, Poplar, London.
N.B.—The country preferred.

TO BUILDERS, DECORATORS, UPHOLDERS, &c.
WANTED, by an experienced Person of respectability, an ENGAGEMENT in an extensive business of the above description; aged 29 years; active, and well qualified to superintend, estimate, assist in bookkeeping, prepare plans and specifications, also an agency departm nt. Has had fifteen years' practical experience. Can give satisfactory references and testimonials, and security, if required. No objecti n to the country (London preferred).—Address, P. R. Post-office, 103, Tottenham-court-road.

WANTED, by a Young Man, a SITUATION in an Architect's Office. Is a very neat and expeditious draughtsman, and can have a good testimonial from the firm he has just left.—Address, E. B. Mr. Jolly's, Trinity chambers, Charing-cross. The country would not be objected to.

TO BUILDER-PAINTERS.
WANTED, by a Young Man, who has a thorough practical knowledge of the Painting, Paperhanging, Decorating, and Graining, a PERMANENT SITUATION, or otherwise. Good reference can be given, having conducted a business for the last five years.—Address, A. B. 3, Portland-place, Walworth common.

TO BUILDERS AND CONTRACTORS.
WANTED, by a Young Man, a SITUATION in the Office of the above. Is thoroughly acquainted with the general routine. Reference given from last employer. No objection to the Country.—Address, A. B. 17, Upper King-street, Bloomsbury.

DRAINAGE WORK.
WANTED, by the Advertiser, a SITUATION as CLERK of WORKS, or For man over Public or Private Drainage Works. One who has just completed a large town. Highest testimonials as to ability and character can be given.—Address, W. E. Office of "The Builder."

EMPLOYMENT.
WANTED, by a Gentleman, an ENGAGEMENT as Counting-House, or Wharf Clerk, for a permanency; to post up books in accurate, a copyist, (writing a quick, clear hand); or in any way that his services can be made useful to those requiring assistance, having a general knowledge of, and being well experienced, in business. Salary moderate.—Address, U. X. Office of "The Builder."

TO PLUMBERS AND BUILDERS.
WANTED, by a Young Man, a permanent SITUATION as PLUMBER, PAINTER, GLAZIER, GAS-FITTER, &c.—Address, A. B. No. 18, Prince-street, Haggerston.

TO ARCHITECTS OR BUILDERS.
WANTED, an ENGAGEMENT (temporary or otherwise), by a gentleman who is thoroughly acquainted with practical building. Can make fair and working drawings, write specifications, measure and estimate, and is fully capable of conducting a business under the direction of the principal.—Address, A. B. at Sparham's Newspaper Office, 14, Prospect-place, Old Brompton.

TO STONEMASONS.
THE Advertiser, the son of a Master Mason, requires EMPLOYMENT in Town or Country, as Letter-cutter and Writer, in Stone, Marble, or Granite. Has six years' experience. Is competent to manage a small or branch business. Good references can be given.—Address, B. B. Post-office, Brighton, Sussex.

TO CIVIL ENGINEERS AND SURVEYORS.
THE Advertiser, a Young Man, having just been engaged on an extensive town survey for the Local Board of Health, where he has been mostly occupied as draughtsman, is desirous of meeting with a similar ENGAGEMENT. Has a good knowledge of surveying and levelling. Salary moderate.—Address, F. F. No. 2, Nelson-terrace, Great Yarmouth.

TO BUILDERS AND OTHERS.
THE Advertiser, being about leaving his present situation as shop foreman, wishes for a RE-ENGAGEMENT as SHOP or GENERAL FOREMAN, or to Superintend the Erection of Buildings. Good references as to stability and qualifications.—Address to H. P. J, Swinton-street, Gray's-inn-road.

TO ARCHITECTS, &c.
THE Advertiser, as COPYIST, will undertake to prepare, expeditiously, any number that may be required for Supply of Quantities, on much lower terms than those charged for lithographing the same. Specifications, Contracts, Agreements, &c. neatly, correctly, and speedily copied, at very moderate charges. Any work copied for the Profession with despatch.—Address, ZETA, Office of "The Builder."

TO ARCHITECTS, &c.
THE Advertiser is desirous of an ENGAGEMENT. Can attend to the duties of an Office, make general, finished, and perspective drawings; is a good colourist in sepia or colour, and can give the highest references and specimens of ability. Salary a secondary consideration.—Address, Mr. W. HUE, 13, Westbourne-street, Pimlico.

TO ARCHITECTS AND SURVEYORS.
THE Advertiser is desirous of a SITUATION in either of the above offices. Salary moderate.—Address, A. B. C. 35, Jonson's-place, Harrow-road.

TO ARCHITECTS.
THE Advertiser, who is a good Draughtsman, has been accustomed to get out finished and working drawings, and has had considerable experience in Gothic detail, wishes an ENGAGEMENT. Good references.—Address, X. Z. 60, Newsrooms, 66, Cheapside, City.

TO BUILDERS AND OTHERS.
THE Parents of a respectable Youth wish to place him as an OUT-DOOR APPRENTICE, where he would acquire a practical knowledge of the Business of a Builder. Address, A. B. 16, Bowling-green-street, Kennington-park.

GAS-FITTING, BELL-HANGING, &c.—A practical Man will be glad to EXECUTE WORK for the TRADE in the above, and all other kinds of work in the locksmith and jobbing business, hackering, bronzing, fitting and fixing lamps, chandeliers, &c. by time or contract. French moderator lamps properly repaired.—Address, J. BROOKES, at Mr. Ryan's Wire-works, High-street, Camberwell.

PLUMBING, PAINTING, or GLAZING.—The Advertiser, having some surplus labour, would be glad to TENDER for any quantity of WORK in the above line (with or without materials) in town or country. Any party requiring work done would find this worthy their notice.—Address, T. S. 10, Dorset-street, Portman-square, London.

TO THE PROFESSION.
A GENTLEMAN OFFERS his ASSISTANCE for three days a week; terms, one guinea per week. Address to E. P. 36, John-street, Bedford-row, where also excellent Chambers may be seen. The HOUSE, a very excellent one, is TO BE LET.

TO TIMBER MERCHANTS AND BUILDERS.
ANY one possessing energy and a small Capital would do well to JOIN the ADVERTISER in the above line.—Established many years.—Senior Partner about to retire. Premises in town and country. A first-rate connection in the English Timber line and retail in London.—Address to S. D. Waterloo House, Kingsland-road, London.

TO ARCHITECTS, BUILDERS, &c.
A YOUNG MAN, whose time is not fully employed, would like to give assistance in any kind of work. Is a good hand at perspective. Terms, 1s. per hour.—Address, H. G. at W. Smout's, 12, Old Dorset-place, Clapham-road.

A YOUTH, aged 18, wishes to ARTICLE himself to a Carpenter and Joiner as an Improver. Been in the trade three years. Not particular to wages or country.—Address (prepaid), L. A. B. 21, Norman's-buildings, St. Luke's, Middlesex.

TO BUILDERS.
A YOUNG MAN, aged 20, having served six years as carpenter and joiner, wishes to ARTICLE himself, for six or twelve months, as IMPROVER at the BENCH, at moderate wages. Weekend preferred.—Address, J. P. No. 40, Star-street, Edgeware-road.

TO ARCHITECTS AND SURVEYORS
A THOROUGHLY competent Person is required to undertake the GENERAL MANAGEMENT of a BUILDING ESTATE, on the south coast. He must possess a good knowledge of architecture, and be perfectly acquainted with details and prices, as he will have to certify for advances to builders.—Address, stating qualifications, references, and remuneration expected, to D. E. P. Office of "The Builder."

A YOUNG MAN, who is a good Portrait Painter, wishes to meet with a Gentleman who would employ him in some light occupation for a few hours daily.—Address, S. L. care of Mr. J. Kendall, Architect, 18, Motcombe-street, Belgrave-square.

TO ARCHITECTS.
A GENTLEMAN, who has just completed an engagement in preparing competition drawings for Model Barracks, is desirous of a RE-ENGAGEMENT for a short period. Terms, by contract or otherwise.—Address, O. U. 18, Motcombe-street, Belgrave-square.

A THOROUGH practical SURVEYOR and BUILDER is desirous of meeting with an ENGAGEMENT, either in Town or Country, as Manager, Assistant, or Clerk of Works, or any situation where trust and responsibility is required. The highest testimonials can be given.—Address, Y. Z. 1, Gracechurch-street, London.

TO IRONFOUNDERS, ENGINEERS, &c.
AN experienced IRONFOUNDER, who has been many years Foreman of an extensive Establishment, is desirous of a similar ENGAGEMENT. Unexceptionable references can be given.—Address, IRONFOUNDER, 10, James's-terrace, Kerby-street, East India-road, Poplar.

TO ARCHITECTS, SURVEYORS, &c.
A YOUNG MAN is desirous of a RE-ENGAGEMENT in an Office as above. Can make fair and working drawings, measure artificers' work, &c. First-rate references given. Age 26, salary moderate. Address, M. E. 17, Pickering-terrace, Westbourne-park.

TO ARCHITECTS.
A FIRST-RATE DRAUGHTSMAN wishes for an ENGAGEMENT, either temporary or permanent. Is capable of preparing all drawings, and taking the entire responsibility of a large job. Would not object to prepare drawings at home, or act as Clerk of Works. Terms moderate.—Address, H. F. 8, Farringdon-street.

A YOUNG MAN, well acquainted with the duties of a BUILDER'S OFFICE, is in want of a SITUATION, either in town or country.—Address, A. D. Office of "The Builder."

TO ARCHITECTS, SURVEYORS, &c.
AN experienced practical Person is open to an ENGAGEMENT for two or three days a week to SUPERINTEND WORKS in the Building Trade as Clerk of Works. Every satisfaction can be given respecting ability and respectability.—Address, M. B. Post-office, Southampton-row, Russell-square.

TO ARCHITECTS.
A GOOD practical DRAUGHTSMAN having a few weeks at his disposal, is willing to enter into arrangements with any Architect requiring temporary assistance. Address, ARCHITECT, 3, Beazley's-crescent, Old Ford-road, Bow.

TO ARCHITECTS.
A S confidential MANAGING CLERK, an experienced Assistant, good Draughtsman, Designer, Measurer, practical Surveyor, &c. for whole or part time, has been regularly articled to the profession with twenty years' experience. Address, M. S. Office of "The Builder."

PARTNERSHIP.—The Proprietor of extensive Saw-mills, possessing new machinery of the most improved description, for cutting timber and deals, planing, moulding, &c. and doing a large and increasing business, is desirous of meeting with a PARTNER. A person having a knowledge of the business, who could take an active part in the management, would be preferred. The capital required to be brought in would not be very large. None but principals or their solicitors will be treated with. Satisfactory references will be given and required.—For further particulars apply to Mr. WALTER, Solicitor, Churchrow, Limehouse.

TERRA-COTTA WORKS, Blackfriars-road, London. The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA-COTTA to M. H. BLANCHARD, late of Coade's Original Works, and successor to them in the manufacture of this invaluable material, that has been so successfully adopted for nearly a century in this country, by our eminent architects and others, in the adornment of our noblest buildings. Groups, Statues, Vases, Fountains, and Architectural Embellishments, at prices and quality that will defy competition, and will be found to be a different material to that now being imitated by puffers and manœuvrers, with only three or four years' experience, and without practical knowledge. Some of the works recently completed by M. H. B can be referred to the whole of the embellishments to the external part of Clifden House, his Grace the Duke of Sutherland's; also Tottenham and Kingsland Churches, the turrets to the Camden-road Chapel, containing from 3,000 to 4,000 feet cube; the colossal Britannias, 10 feet high, at the County Fire Offices, Cornhill and Lombard-street; the Arms, with the allegorical group, at the Kent Mutual Insurance, Queen-street; and other works elsewhere, too numerous to mention. A large Stock of newly designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

BLASHFIELD'S PATENT TERRA-COTTA, Manufactured at Mill-wall, Isle of Dogs.—Capitals, Consoles, Tracery for Parapets, Balusters, String Courses, Friezes, Bas reliefs, Vases, Statues, Chimney-shafts, and all other Architectural Ornaments modelled, finished, and burnt, in the best manner, and warranted to stand heat and frost, either in Buff or Red coloured Terra-cotta.—A great variety and large stock may be seen at BLASHFIELDS' Warehouse and Show-rooms, No. 1, Praed-street, Paddington.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or other vapours or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.
The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an inspector made of production, by mixing with the oxide certain substances calculated to give it increase i weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchaser of such orxides becomes a very expensive result to the owner of the premises painted with them.
The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. R. MILLER and CO and by the Company's Grinding Agents, in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street, City; FREDERICK BRADY, Wholesale and Retail Agent, 35, Tottenham court, New-road. In Manchester and Liverpool by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and who undertakes painting ships, warehouses, dwelling-houses, &c. in Leith, by Messrs R. ANDERSON and CO. Timber-bush; and in Southampton, by Mr. H J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.
The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.
For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

This Paint possesses in an eminent degree the following advantages over all other known Pigments:—
INDESTRUCTIBILITY BY HEAT—PRESERVATION OF IRON FROM OXIDATION, WOOD FROM DECAY, AND MASONRY AND BRICKWORK FROM DAMPNESS—PERMANENCE OF COLOUR AND FREEDOM FROM DELETERIOUS PROPERTIES—SUPERIORITY OF BODY.

The Protoxide Paint, as at present produced, is of one shade of colour, viz.—a pale drab, but it may be tinted with any other colour to suit the taste and purpose for which it may be required. It is not affected by sulphuretted or carburetted hydrogen gas, bilge water, or indeed foul air of any kind, and is therefore well adapted for the interior of Ships, Warehouses, Offices, Stabling, &c.; and from its total freedom from deleterious properties, it will be found of great value for painting the interior of Hospitals, Asylums, Unions, Gaols, and other Buildings which may require to be painted during occupation.—Sole authorized Agents for England:—
MESSRS. C. GRABHAM AND CO. 4, BARGE-YARD, BUCKLERSBURY, LONDON.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.
Prepared only by W. J. STENT, Warminster.
London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be entirely avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Painters in Original Packages, each cask stamped HUBBUCK, LONDON—PATENT. And if not so marked the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.
N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has got rely CLOSED his Establishment on the Surrey side of the Thames, and that Articles of the manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Pimlico-street, Paddington.
6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which, its eminent hydraulic properties stamp it at once as the first Cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have neither had the money or the will. Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour, resembling the Bath stone.—CHARLES RICHARDSON, 6 South Wharf, Paddington.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.
Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.
ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.
SECONDS, PAVIORS', STOCKS, and other BRICKS.
CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 2d, 1855. CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to, orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the River Parrett.
These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.
FULLWOOD THOMPSON and Co. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.
Date of St. Mary-street, Bridgewater, July 26th, 1854.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. As a result of COMPARATIVE EXPERIMENTS on the strength of this and other Cements, proved at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Mollart-street, Westminster, who prepare one quality only of Portland Cement.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard stucco in dry weather, and can be painted upon within a few days of being made; sold by JOHN BAZLEY WHITE and BROTHERS, Mollart-street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Steel-street, Liverpool.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Wine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL. Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Hiding, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent. N.B. These Cements supplied or shipment on advantageous terms.

NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishments, &c.—will not twist, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7 0 0
Fine	3 0 0
Coarse	2 10 0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis.
11 Gregge-yard, Lombard street, City

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent. ROMAN and PORTLAND CEMENT of the first quality manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

TO BUILDERS, CONTRACTORS, SHIPPERS, and Others.
G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland-yard, Westminster.
DAVIES and NORMAN, Agents.
Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.
IN EVERY VARIETY.

SOUTHAM BLUE LIAS LIME and PORTLAND CEMENT WORKS.—OLDHAM and TATHAM are now prepared to receive orders from contractors, builders, and merchants for Ground and Lump Blue Lias Lime, also for Portland Cement and Lias and Bath. Parties in want of which will be found of very superior quality, and will be improved by the addition of two or more parts of sand to one of cement. O. and T. s boats can run alongside any wharf or works and all orders addressed to Warwick will receive prompt attention. Office, Warwick.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.—T. H. BOOKMAN, WILD, and CO. beg to inform the public and trade generally, that they have completed their works for the manufacture of PORTLAND CEMENT, and from their proximity to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, a siding from which will be carried into their works, enabling them to transact any orders they may receive to any station on the above-mentioned line, and from both is prepared to supply the public with a first-rate article, in both cement and lime, on moderate terms. Persons sending orders for cement, are respectfully requested to say for what purpose it is required, and printed instructions will be advised to the head of each cask. Orders to be addressed to Mr. THOMAS WEEKES, Agent at the Works.
Agents in London: Messrs. GEORGE POTTER and CO. Lime Merchants, Pudding Pie Hill, Blackfriars; and 18, South Wharf-road, Paddington.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF ROAD, Paddington.
WILLIAM PETERS begs to inform the trade he is in a position to supply the very best GREY STONE LIME in any quantities from the above wharfs, or per large barge from the kilns Southam-lane, Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH perfectly NON-ABSORBENT (no quantity of rain having any effect upon it), and will not VEGETATE or RUB OFF. Stucco Cement at 1 Stucco Paint CLARK and BENGOUGH, Manufacturers, Office, 4, George-yard, Lombard-street. Works, Grand Surrey Canal Bridge, Old Kent-road.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new, whether of Thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 89, King William-street, City, London. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a clasp and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvertoft, near Rugby; or in London, Gloucester, or Bridgewater.
Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

THE KINSON CLAY-WORKS POTTERIES, and FIRE-BRICK ESTABLISHMENT, near Poole, Dorset, Manufacturers of every description of Sanitary Glazed Sewage-pipes, Closet-pans, Furnace-blocks, Fire-bricks, Gas-r torts, Crucibles, &c. &c. The completion of the Kinson Pottery places the Proprietors in a position to supply Builders and the Trade generally with any quantities of the above description of Articles at moderate prices. The pottery is situate about a mile and a half from the town and port of Poole. It is worked by steam power, and the pipes are made by the most approved patent machinery, and will bear favourable comparis n with any manufactured in the kingdom. The fire-bricks have been tested and are found fully equal in all respects to those manufactured at Stourbridge and Newcastle. All articles are made from the clays and materials found on the estate. There is an inexhaustible quantity of all descriptions of Dorsetshire Clay, used for pottery purposes, which can be supplied to the Staffordshire, North Country, and London markets, upon favourable terms.
Lists of prices and all other information will be furnished, upon application to Mr. T. W. GREEN, at the Works.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Second y, that the trade term, "Terro-Metallic," is the exclusive right of the Proprietor; and, thirdly, that the "Reports of the Jurors," page 981, of the Great Exhibition, rank the Manufactories known so long as "The Tilleries," Tunstall, Staffordshire, as the first of the kind in the world.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 50s. per 1,000; floor bricks and 6-inch pavings, at 37s. 6d. per 1,000; 8-inch pavings, at 37s. 6d. per 1,000; 9-inch pavings, at 75s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extensively available. Slabs and Tiles for Fireplaces and Hearths, Covings for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

GREAT NORTHERN WHARF, York-road, Kings-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants. Builders, contractors, and others supplied with every description of building material at the lowest market prices

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.—Grey stocks, 26s. per thousand; Grizzles, 20s. per thousand; Rough Stocks, 20s.; Place, 16s. 7erms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.
Malm Place, half-washed Stocks, and Place Bricks, also on sale. These are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.
Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.
N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS, LIME, WHITING, TILES, FLINTS, GRAVEL, &c.—Messrs. MEESON and CO. supply stocks, pickings, rough stocks, place, red kiln bricks, paviors, &c. &c. on low terms, to any part of the Thames, the various canals, the River Lea, &c. or by rail to any station on the Eastern Counties line, or any railway connected with it. Also, flints for building boundary walls, stables, cottages, &c. by using which one-third of the expense may be saved. Also, lime, chalk, chalk rubbish, gravel, and ballast. Whiting of the best quality, lime, both white and flare, bricks, fire goods, &c. can be transmitted to Messrs. MEESON'S Wharf Kilns at Bow-bridge, Stratford, Essex; or from the Works at Gray's, Essex.—Orders by letter, to Messrs. MEESON and CO. Gray's, Essex, executed with despatch.

PAPIER MACHE AND CARTON PIERRE ENRICHMENTS MANUFACTORY,

49 & 50, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

Respectfully the attention of Architects, Builders, Decorators, and others, to their large assortment of ENRICHMENTS in every style, executed in the highest class of art. Enrichments for ceilings of every period, elaborate or simple, Gothic, Elizabethan, pendentive or Louis XIV., in much or strictly, and to any degree of cost; Italian and Greek Renaissance, and many modified characters, executed for the best houses, and from designs of architects of England and the Continent. Wall dressings, rich panels of every period, rich Elizabethan and Gothic Dados, in many designs. Door-cases, mouldings, and dressings.

A large assortment of Gothic Bosses to many varied intersections of all sizes, tracery and panel headings for church works, organ dressings, of most periods, and faithfully executed to the trace to such. The general decorations of Drawing and Dining Rooms, Libraries, &c of very considerable extent, as furniture, glass frames, tables, window cornices, screens, candelabras, and the whole range of accompaniment to reception-rooms of the first class, as well as more subdued.

The facilities and repeated enlargement of means enable GEORGE JACKSON and SONS to announce the execution of works of the above descriptions in these advantageous materials at a cost considerably below any known method, while for quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

WELSH, STOURBRIDGE, AND NEWCASTLE FIRE-BRICKS, LUMPS, AND TILES, at much less than cost prices. The BUSINESS to be DISPOSED OF, with the valuable connection, and a portion of the PREMISES to carry on the same, TO BE LET, at almost a nominal rent.—For particulars inquire on the premises, Honduras Wharf, Bankside, Southwark, London.

GREAT REDUCTION of PRICES.—It being now ascertained that the importation of Pine Planks will be unusually short this year, a great advance in price is inevitable; but E. F. having a considerable stock on hand, is still enabled to quote the following reduced prices:

Pine Planks, 12 ft. 3 in. by 11 in.	from	4s. 6d.	each.
Spruce Deals	"	2s. 9d.	"
Yellow ditto	"	4s. 6d.	"
Yellow Battens, 12 ft. 3 in. by 120.			
Honduras Mahogany, in logs	"	0s. 4½d.	per ft. sup.
Ditto ditto, in boards and planks	"	0s. 6d.	

Prepared Flooring, Veneers, &c. at equally low prices. A list forwarded on application.
SAMUEL PUTNEY, Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well seasoned OAK and DEAL PREPARED FLOORING-BOARDING and MATCH BOARDING of all sorts, from ¼ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber Deals, Oak Planks, Scantlings, Sash Stiles, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

SEASONED FLOORING.—GEO. NOKES and CO. (late Archbutt and Atkinson), beg to acquaint builders and the trade, that they have a large STOCK of DRY WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at the following reduced prices, for cash:—

¼ inch White, 13s. 6d. per square.		¼ inch Yellow, 16s. per square.	
1 ditto 15s.	"	ditto 18s. 6d.	"
1 ditto 18s.	"	ditto 20s.	"

Laths, 3os. per load.

Also Timber, Deals, Planks, &c. Mouldings by machinery in very great variety.
ST. PANCRAS SAW-MILLS, Cambridge-street, Old St. Pancras-road.

MACHINE CARVING, JOINERY, and MOULDING WORKS, Belvidere-road, Lambeth.—The Proprietor of the above works begs respectfully to apprise the nobility, clergy, architects, builders, and others, that he is now generally requiring Carved and Moulded Works, that he is now enabled to execute any orders that may be entrusted to him with the utmost promptitude. Every description of Carved Work and Tracery, roughed out by the machines for the trade only. Pulpits, Lecterns, Reading-Desks, Screens, Altar-Rails, Tables, Chairs, &c. executed at the shortest notice. Specimens of Carved Work, suitable for various purposes, can be seen at the Works, and Estimates furnished upon application.

PADDINGTON TIMBER-YARD.—SAWING, PLANING, and MOULDINGS.—3, Irongate Wharf, Praed-street, Paddington, and 30, St. John's-wood-terrace, St. John's-wood.—GEORGE WILLIAM FRY begs to draw attention to his large stock of SEASONED and PREPARED WOOD GOODS, at the lowest current prices. Liberal allowance for cash, and facility for immediate despatch by rail or canal, which affords a very advantageous country as well as town buyers. Illustrated and priced sheets of moulding designs and general price lists of goods forwarded post free on application. Goods free to any part of town, including the various railway and canal stations.

N.B.—Sawing and planing for the trade.

ACORN TIMBER WHARF.—At RICHARD MAY'S extensive Waterside Premises and Saw-mill, Canal Bridge, Old Kent-road, builders and others can be supplied with all kinds of FOREIGN TIMBER; planks, deals, and battens on sale, direct from the importers; prepared floorboards, mouldings, pine and cut deals, slating battens, laths, English oak plank, and sash-sills, at reduced prices for cash. The Monthly Price Current forwarded on application.

OAK VARNISH, 8s. 6d. per Gallon, in quantities not less than two gallons, for cash only, at C. LEFTWICH'S Lead, Glass, and Colour Warehouse, 81, Munster-street, Regent's-park. A large quantity of PAPER-HANGINGS, CHEAP. 21s. per cwt. given for old lead.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Sold by W. NAYLOR'S Stains may be had at the Factory, 44, James-street, Oxford street; also Manufacturer of Improved Knotting and Decorative Varnishes.

TO BUILDERS, CARPENTERS &c.
SAMUEL CROWHURST, JUN. begs to call the attention of Builders, Cabinet-makers, &c. to his Stock of seasoned and well-assorted Timber Goods, Deals, and Mahogany in Logs, Planks, Boards, &c. at prices which will be found equal if not less than any advertised. Country Builders supplied on the most liberal terms. Tanhouse-yard, Hanover-street, Walworth; and Francis-street, Newington, near the Church.

NOTICE.—IMPROVED WOOD MOULDING MILLS and MARBLE WORKS.—J. SIMMONS begs to acquaint his customers and friends that in consequence of the increased trade and patronage he is continually receiving, he has found it necessary to have larger premises for the manufacture of his IMPROVED WOOD MOULDINGS, which are acknowledged by the principal large firms, architects, and others, who have used them, to be the best ever produced by machinery. J. S. so returning thanks for the liberal patronage already bestowed upon him, begs to call attention to his large stock of mouldings now on hand. Marble chimney-pieces, monuments, tombs, and every description of marble and Imitation work manufactured by patent machinery. NEW WORKS, No. 20, BRIDGE-TERRACE, HARROW-ROAD, PADDINGTON, about 10 yards from the Great Western Railway Bridge. New Price Lists will shortly be ready; to be had on application, or if forwarded, by enclosing six postage-stamps. Please note the address—20, BRIDGE-TERRACE, HARROW-ROAD, Paddington, near the Great Western Railway Bridge.

PURE WATER.—The attention of Boards of Health, Water Companies, Engineers, &c. &c. is particularly requested to a newly-invented PIPE for CONVEYING WATER, which possesses most important advantages. It can be made strong enough to resist any pressure; it is comparatively flexible, easily joined, has great power of resisting the effect of frost, and what is of still higher consideration, is perfectly innocuous. This combination of desirable properties is produced by lining lead-n pipes with gutta-percha. Further information may be obtained on application to the Patentees, Messrs. SPENCE and SON, Lead Works, Birmingham; or the GUTTA PERCHA COMPANY, 18, Wharf-road, City-road, London.

DRAINAGE of LAND.—WANTED, to undertake the DRAINAGE of LAND by CONTRACT, or to erect temporary Tenements in order to supply Drain-pipes at a reasonable price. J. JOHNSON, Drainage Engineer and Contractor, Abington-street, Westminster.

LAND DRAINAGE.—MR. THOMAS SCOTT, Land Agent and Valuer, 5, Charing cross, London, is prepared to undertake the PLANNING and EXECUTION of LAND DRAINAGE, in large or small quantities, by contract or on commission. He has now at work around London steady and well-organized "gangs," under competent foremen and pipe-layers. Mr. SCOTT is at present carrying out extensive drainage works on Crown lands, which he will be happy to show to gentlemen desirous of seeing them. Communications addressed to him as above will be immediately attended to. September 22, 1855.

WOOD-CARVING and FRET-CUTTING.—T. HEWETSON, Wood-Carver, and Fret-Cutter, 5, Hatton-garden, London, begs to inform Architects, Builders, Founders, Cabinet and Pianoforte Makers, that he is prepared to execute any kind of Architectural or Ornamental work, with accuracy and despatch.—T. H. particularly solicits the attention of Ironfounders, having had many years' experience in ornamental pattern making. Estimates furnished.

J. CHILLINGWORTH, Modeller and Letter Maker, respectfully invites the attention of the building public, to his well assorted stock of Enrichments in Composition, Cement, and Plaster, consisting of Bed Mouldings, Ceiling Flowers, Cases, Trusses, &c. &c. Workmanship, Materials, and charge low. Projecting letters in every variety of pattern, in wood or composition.—Specimen of letters on front of "The Builder" Office, and in all the main thoroughfares of London.—Manufactory, 32, Francis-street, Westminster-road.

ROYAL POLYTECHNIC. Patron—HIS ROYAL HIGHNESS PRINCE ALBERT.—The Sixth Course of Monday Evening LECTURES to the Industrial Classes will commence on Monday, October 8th, at Eight, with a Lecture by Jacob Bell, esq. on the Adulteration of Food. Sir Robert Kane, M.D., F.R.S.; George Godwin, esq., F.R.S., Editor of the "Builder;" Dr. Versalius Pettigrew, Hon. F.R.C.S.; Dr. Trevethan Spicer; J. H. Pepper, esq.; and G. Buckland, esq. will lecture in this course.

ON LONG BUILDING LEASE.—TO BE LET, an eligible PLOT of GROUND, at a very low ground-rent.—Apply to Mr. WALTER ERRINGTON, No. 7, Tanner's-hill, Deptford.

FREEHOLD LAND.—To BUILDERS or Parties wishing to build Suburban Residences.—FREEHOLD LAND TO BE SOLD, on some of the most eligible building estates in the neighbourhood of London, viz.:—
FOREST-HILL, Croydon Railway.
ST. MARGARET'S, near Richmond, South Western Railway.
OAKLANDS GRANGE, Woolwich, Surrey, ditto.
HOUNSLOW, Middlesex, ditto.
TOTTENHAM GREEN, Eastern Counties Railway.
PUTNEY, South Western Railway.
RECTORY ESTATE, EALING, Great Western Railway.
The WADDINGTON ESTATE, ENFIELD, Eastern Counties Railway.
WOOD-GREEN, Green-lanes, Hornsey, Great Northern Railway.
OLD FORD, Stratford, Eastern Counties Railway.
Part of the purchase-money may remain at 5 per cent. interest. Parties assisted in the building of their own residences. Several Plots to be Let on Building Lease. Money advanced to respectable parties.—Apply to Mr. GEORGE MORGAN, 5, Chancery-lane.

LEIGH, ESSEX.—TO BE LET, a PLOT of GROUND, sufficient for ten houses, and 180 feet deep, on a lease of ninety-nine years, commanding a good view of the sea, and in the best part of Leigh, one minute's walk from the railway station. For particulars, apply to Mr. R. L. CURTIS, Surveyor, 1, Riches-court, Lime-street, City, and of D. MONTAGUE, Esq. Leigh.

HAVERSTOCK-HILL.—To BUILDERS. TO BE LET, in the MALDEN and QUEEN'S ROAD (both main roads), some commodious FRONTAGES for Shops and Private Houses. All the sewers are in on the estate, roads well formed, and now making. Term, ninety-nine years. Low ground-rents. Bricks supplied at a low price, and liberal cash advances. Apply to Mr. JOHN MOORE, 36, Charlton street, Euston-square.

TO TIMBER MERCHANTS and OTHERS. The Proprietors of Lett's Wharf, Commercial-road, Lambeth, offer the most convenient Wharf for landing all sorts of English Timber, &c. Spacious Dry and Seasoning Docks, and 10-ton Cranes, Sawpits for converting Timber, &c. Freights paid on delivery.—Apply to G. NOKES and Co. as above.

FREEHOLD BUILDING LAND TO BE LET on building lease for 99 years, at 1s. 6d. per foot frontage, 80 feet deep, for small fourth-rate houses, in large or small plots, and on very advantageous terms, close to Forest-gate station, and not far from Stratford station, Essex and the Eastern Counties Railway, four miles from the City. Leases granted at once. No law charges or Surveyors' fees.—Apply to Mr. PARSONS, 7, Union-court, Old Broad-street, City.

BUILDING LAND TO BE LET, at HALLSVILLE....Term 1,000 years, for small cottages,
CANNING TOWN " 1,000 " for small cottages,
NORWOOD..... " 1,000 " for villa residences,
STRATFORD .... " 100 " for small cottages,
POPLAR..... " 98 " for fourth rate houses.
Advances 70l. to 100l. at 5 per cent. on each cottage.
Apply to Mr. Wm. ELLISON, Architect, Stainsby road, Limehouse.

TO BUILDERS, MARKET-GARDENERS, NURSERYMEN, and OTHERS.—TO BE LET, a PLOT of GROUND, of about Seven Acres in extent, situate at Brixton, Surrey, for many years occupied as a Nursery Ground.—For terms, apply to Mr. ALLEN DAVIS, 11, Old Jewry-chambers, City.

TO BUILDERS and OTHERS.—A most eligible PLOT of FREEHOLD GROUND TO BE LET, suitable for Fourth-rate Houses, and lying near the Hackney Railway, low ground rents, 99 years' lease, direct from the Freeholder. For particulars apply by letter, to R. G. care of Mr. Doyle, 4, Maze pond, Borough.

GUILDHALL, London, 2nd October, 1855. The COMMITTEE for LETTING the BRIDGE-HOUSE ESTATES, will meet at GUILDHALL, on FRIDAY, the 12th day of OCTOBER instant, at One o'clock precisely, to LET by TENDER, on repairing leases, TWO HOUSES, and a PIECE of GROUND, on the west side of Hughes's-fields, near Peacock-row, Deptford, and TWO HOUSES and LAND on the east side of High-street, Stratford, near the Railway Station.—Plans of the properties and conditions for letting, may be seen at the Architect's Office, Guildhall.
FERDINAND BRAND, Comptroller.

TO BREWERS, HOTEL-KEEPERS, AND OTHERS.

TO BE LET, a commodious HOUSE, situate at Leigh, Essex, commanding a good view of the sea, about half way up the hill, and near to the railway station, with outbuildings, extensive garden and yard, well adapted for a genteel hotel, with tap-house, stables, &c. the whole occupying a space of about 2 roods. For particulars apply to Mr. R. L. CURTIS, Surveyor, 1, Riches-court, Lime-street, City, and of D. MONTAGUE, Esq. Leigh.

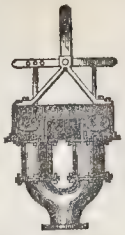
TO BUILDERS.—A Gentleman having some very valuable BUILDING FRONTAGE in one of the most popular and rising watering places on the South Coast, where houses are much wanted, is willing to treat with builders for building on the same. Liberal advances would be made, but any application must be in a position to give good references, and satisfy the Advertiser as to his responsibility and ability to carry out the arrangements he enters into. The site is a very attractive one, and any builders with capital would find it a profitable investment.—Apply, stating name of applicant, and also names of references, to D. E. F. Office of "The Builder."

THE CONSERVATIVE LAND SOCIETY. FOURTH YEAR.—The third financial year being ended, a favourable opportunity is presented to persons desirous of investing capital or savings, at the opening of the fourth year, whether as investors for the sake of drawing half-yearly the guaranteed 5 per cent. interest per annum payable on completed shares and on uncompleted shares upon which a years subscription and upwards have been paid, and receiving whatever bonus may be annually declared, or whether as allottees, for the purpose of acquiring building land to secure lucrative ground rents. The taking of land is quite optional. No risk and no responsibility. Monthly payments, 5s. per share. For prospectuses, apply to
33, Norfolk-street, Strand, London, October, 1855.
CHARLES LEWIS GRUNEISEN, Secretary.

BUILDING MATERIALS.

BECK'S WHARF, ISLEWORTH.—Builders having works to execute south-west of London, will find a good supply upon this wharf, on reasonable terms, with every convenience for speedy loading by travelling cranes, either into barges or carriages. Portland, Caen, Bath, and Yorkshire Block Stone always in stock; Landings, Paving, &c. &c. Marble in Slab, Chimney-pieces, Slab and Paving Slates from the Penrhyn Quarries. Timber, Deals, Limes, Cements, Clay Goods, &c.—N.B. This wharf is very near the St. Margaret's station.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GROSSS' WHOLESALE WAREHOUSE, 23, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.



FOWLER'S

Registered Flushing Basin,—the most effective Syphon-trap yet offered to the public.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. W. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1853.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

TO WATER AND DOCK COMPANIES, CONTRACTORS, &c.

PARSEY'S PATENT REVOLVING PUMP will throw as much water with one-third the labour as any other pump. One of these pumps at work at No. 70, Strand.

To LOCAL BOARDS of HEALTH and GAS and WATER COMPANIES.—FREEMAN ROE'S PATENT SLUICE VALVES, acknowledged to be the best in use; hydrants or fire plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.

W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

TO CONTRACTORS.

PORTABLE STEAM-ENGINES TO BE LET, on HIRE, by the WEEK, MONTH, or for any period, of 8-horse, 10-horse, 12-horse, 16-horse, 20-horse, and 25-horse power, adapted for Contract work generally. These engines have been successfully employed for years by all the principal contractors, and are ready for delivery at a day's notice. Several may be seen at work. Apply to Messrs. MEDWIN, HALL, and CO. Engineers, 92, Blackfriars-road, Sole Patentees and only Manufacturers.—N.B. Any of these Engines may be purchased.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

JAMES STIFF,

MANUFACTURER OF GLAZED STONEWARE DRAIN PIPES, WATER-CLOSET PANS, SINK TRAPS, INVERT BLOCKS, AND ALL OTHER ARTICLES SUITABLE FOR DRAINAGE AND OTHER PURPOSES,

GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge, City-road Wharf, City Basin; Dock-head, Bermondsey; Hanover Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town; J. TURNER, 2, South Wharf, Praed-street, Paddington; CUTHILL, Brothers, 32, Bryanston-street, Covent Garden; and at EDWARD COCK'S 94, Wardour-street, Oxford-street. Drawings and List of Prices will be forwarded free on application.

PRIZE MEDAL, CLASS 2.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 160 to 360 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

TO ENGINEERS, MACHINE MAKERS, AND OTHERS.

CHARLES MACINTOSH and CO., Patentees and Manufacturers of the VULCANIZED INDIA-RUBBER in all degrees of elasticity, recommend this material as capable of sustaining the action of hot or cold water, gas, steam, acids, and grease. It is used extensively for valves in marine and land engines, railway buffers and springs, washers for pipe-joints, hose and tubing; also for gas-holders, acid pumps, alkali cisterns, &c. &c. Articles, moulded or otherwise, made to any size or figure.—Address, 3, Cannon-street West, London; and Cambridge street, Manchester.

WARNER'S PATENT VIBRATING STANDARD PUMPS.—PATENT CAST-IRON PUMPS, for the use of farms, cottages, manufactories, and wells of a depth not exceeding 30 feet.

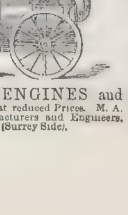
Diameter of Barrel.	Length of Barrel.		£ s. d.
2½ in.	short	1 ft. 7 in.	1 12 6
2½ „	long	3 3	1 15 0
3 „	ditto	3 6	2 2 0
3½ „	ditto	3 6	2 18 0
4 „	ditto	3 6	3 5 0
2½ „	short, with 15 feet of lead pipe attached, ready for fixing		2 12 0
2½ in.	long ditto	ditto	2 15 0

Fitted for lead, gutta percha or cast iron flanged pipe, as required.

The short barrel Pump is very convenient for fixing in situations of limited height and space, for the supply of coppers and sinks in washhouses with soft water from underground tanks, or in hot, forcing, and plant houses: they may be fixed, when desired, under the stairs. May be obtained of any Ironmonger or Plumber in town or country, at the above prices, or of the Patentees and Manufacturers, JOHN WARNER and SONS, No. 8, Crescent, Jewin street, London. Every description of Machinery for Raising Water, by means of wheels, rams, deep well pumps, &c. Also, Fire and Garden Engines, &c. &c.—Engravings sent on application.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.



PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 38s. per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

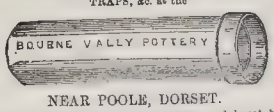
STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS, Engineers and Contractors, John's place, Holland-street, Southwark, London.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

TO CONTRACTORS, BUILDERS, AND OTHERS.



TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 113, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

DURABILITY of GUTTA PERCHA TUBING. Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT, —Second Testimonial.—"March 10th, 1852. In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

ALT-GLAZED STONEWARE PIPES, BENDS, JUNCTIONS, CLOSET-PANS, TRAPS, &c. at the

NEAR POOLE, DORSET.

These Pipes being made under immense pressure by patented machinery, and burnt by intense heat to an unusual degree hardness, are very far superior to the best ware hitherto manufactured in Hants and Dorset; they are made of clay of the est quality, the produce of the estate, and will bear comparison with any Pipes in the kingdom, and can be had upon applition to

SUPERIOR GLAZED STONEWARE

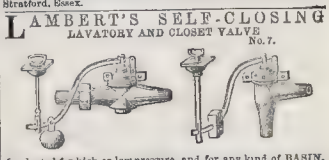
DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street.—Hullwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britton-street, Chelsea: and at the Pottery.

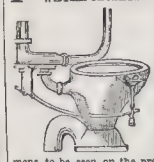


VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONE WARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE No. 7.



is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 300 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,

THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.

N.B. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price, complete, 11s. 6d. each.

PATTEN'S PATENT HIGH-PRESSURE WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with cistern, cranks, wire, lead trap, &c. Any number of Closets can be supplied from one main.

Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER-CLOSETS patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals. Drawings, testimonials, and references of the highest respectability forwarded by post. PRICE for Closet and Apparatus COMPLETE FROM 25s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 39, Old Fish-street, near St. Paul's, London.

CROWN GLASS, 13 TABLES, 32s. PER CRATE.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS. This ware, allowed by all to be of the best manufacture, by the unparalleled quality, combined with cheapness, will be found to meet the approbation of consumers. Sole Agents, L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

SUPERIOR STONEWARE GLAZED PIPES of a quality not to be surpassed.—E. and W. STURGE respectfully invite attention to the very superior character of their stone pipes, which they are confident are such as must give great satisfaction, the price being also lower than many in the trade, viz. 25 per cent. discount off the list for cash. Junction Bends, &c. Pans and Traps of the first quality, Yorkshire Paving, Sinks Slate, &c. all at low cash prices. E. and W. STURGE, Bridge Wharf, City-road.

N.B. A small extra charge is made upon goods required to be delivered. October 1, 1855.

BY HER MAJESTY'S ROYAL LETTERS PATENT, APRIL 27, 1855.

JAS. LEWIS'S PATENT STENCH-TRAP.

FOR STREET USE.

Price, with Gutter Plate, 19 inches by 13 inches, each 25s.; weight about 2 cwt. Larger sizes made, if required.

FOR AREAS, &c.

Price, with Back Plate, 6 inches by 7 inches, each 6s.

FOR COURTS, YARDS, &c.

10 inches by 8 inches, each 3s.

The above articles are protected for the Patentee by the British Government, on account of their construction, for the advantages they possess, being a perfect trap for preventing smell proceeding from itself or the drain, should there be water or not in the pan. When stench-traps are put down generally speaking no attention is ever paid to them afterwards; this renders them defective. The above, therefore, are a desideratum, as they require no attention. It is well known when cholera has visited this country, it commences and leaves last in the places where the air is vitiated by obnoxious gases proceeding from drains, &c.

Any inhabitant suffering by the nuisance, is entitled, by the Sanitary Act to lay complaint before the public or private authorities of the property, to lay down stench traps where they are required. Any persons interested in this advertisement will be kind enough to write to the patentee for drawings and if wished, testimonials. Please order from any respectable ironmonger, contractor, or the Patentee, JAMES LEWIS, Ironfounder, Abergavenny. Specimens to be seen in the Court of Inventions, Crystal Palace, Sydenham.

SALES BY AUCTION.

DESIRABLE INVESTMENT.

MR. PENNINGTON has been instructed by the Trustees of the Cork, Blackrock, and Passage Railway Company to SELL, by AUCTION, at the Auction Room, 51, Patrick-street, Cork, on WEDNESDAY, the 17th day of October, at the hour of One o'clock precisely, the LEASE, for 999 years, from 1st May, 1851, of those valuable PREMISES, situate in VICTORIA-VILLA and HOPE-HILL, the handsome marine residence in occasions of Philip Cosgrave, Esq., and the PLOT of BUILDING GROUND ADJOINING, containing a frontage of about 220 feet, all held under lease for a term of ninety years and six months, from the 30th day of September, at the yearly rent of £50. The extensive property is held in a single lot, and has been recently divided, within a few minutes' walk of the railway terminus at Passage, and about an equal distance from the fashionable watering-place of Monkstown, from which it commands a very fine view of Cork Harbour and Queenstown. It is beautifully situated on the River Lee, and possesses the important advantage of a quay, and the strand to low water-mark in front. The baths have been fitted up in the best style, and contain hot and cold salt water, and shower baths. The pool measures 60 feet in length by 45 feet in breadth. There are also twelve hot, six shower, and two vapour-baths, with dressing-rooms and bedroom. The hot baths are each three feet deep, and the cold baths of the same width and length, but three feet six inches deep. The dressing-rooms are presented to Mr. Arnold by Dr. Leigh, at a rent of 60l. per annum, which is considerably under their value. The tenancy will determine on the 1st day of May in each year. The house and premises in occupation of Mr. Arnold, at the rent held by him, part under a lease for eighty-six years from the 1st day of May, 1851, at the yearly rent of £40, and part under a parol tenancy, at 15l. per annum. The first-named premises may be viewed by permission of the tenants, where printed particulars and conditions of sale may be had; also at Messrs. Hume and Bird's, Solicitors, 14, Great James-street, Bedford-row; at the Royal Oak, Bishop's-road, Bayswater, at the Auction Mart; and at the Office 20, Albion-street, Hyde Park-square.

TO BUILDERS and OTHERS.—Stock of Chimney-pieces, Two Enamelled Stoves, Dipping-trough, Sawing-bed, Two Horses and Pairs and Items in Trades.

MR. GEORGE DEEKS is instructed by the Administrator of the late Mr. Edward Hunt, deceased, to SELL by AUCTION, on the PREMISES, at SALE-STREET, PADDINGTON, on THURSDAY, 11th OCTOBER, at TWELVE o'clock precisely, the entire STOCK in TRADE of a SLATER comprising about 100 Chimney-pieces, various; unfinished ditto, cups, trusses, &c.; marble slabs, slate cisterns, and sundry items in trade. Also, the household furniture of the usual description.—The same to be viewed prior to and morning of sale. Catalogues may be had on the Premises, at Messrs. Hume and Bird's Solicitors, 14, Great James-street, Bedford-row; at the Royal Oak, Bayswater; and at the Offices, 20, Albion-street, Hyde Park-square.

MARK-LANE, CITY.—Extensive Sale of Building Materials.

PULLEN and SON are directed to SELL by AUCTION, on the PREMISES, on TUESDAY, OCTOBER 9, at TWELVE, in lots, all the valuable BUILDING MATERIALS of three warehouses, Nos. 3, 4, 5, 6, 7, 8, and 9, Mark-lane, belonging to the Worshipful Company of Drapers, comprising good sound bricks, fine plain tiles, capital oak and fir timber in scantling and flooring, a ton of lead, in gutters, flats, cisterns, and pipes; plate glass and other sashes, nearly new skylights, glazed with plate glass, doors, wainscoting, and other partitions, flooring and lining boards, iron columns, a circular iron staircase, stone paving, and a variety of useful materials and fittings up. May be viewed. Also to be taken down from the Premises, and of PULLEN and SON, 7, Pore-street, Cripplegate.

WORMWOOD-STREET, BISHOPSGATE. Building Materials of several Houses, Coach-houses, Stabling, &c.

PULLEN and SON will SELL by AUCTION, on the PREMISES, on FRIDAY, OCTOBER 12, at TWELVE, all the valuable BUILDING MATERIALS of THREE HOUSES, Wormwood-street, and a range of stabling and coach-houses in the rear, comprising sound and useful work, plain and rubbed slates, lead gutters and pipes, timber, sashes, doors, 3 or 4 tons of iron, fine marble mantels, and stable fittings, paving, &c. May be viewed the day previous. Catalogues had at the Architect's Office, Guildhall; and of PULLEN and SON, 7, Pore-street, Cripplegate.

TO MARBLE MASONS, SCULPTORS, BUILDERS, AND OTHERS.

MESSRS. EVERSFIELD and HORNE are instructed to SELL by AUCTION, at Mr. LLOYD'S MARBLE WHARF, foot of Vauxhall-bridge, Millbank, on WEDNESDAY, the 10th of OCTOBER, a small and choice selection of MARBLE, comprising Statuary (suitable for Easels), Vein, Sicilian, and Black and Gold, in block and slabs, which must be immediately cut, to allow certain alterations to be carried out. May be viewed two days previous, and catalogues had, at the Place of Sale, and of the Auctioneers, 53, Parliament-street, or Cash Exchange. Approved bills at six months will be taken in payment.

TO CONTRACTORS AND OTHERS.—Genuine Sale of Cart Horses at Pimlico.

MESSRS. EVERSFIELD and HORNE are instructed to SELL by AUCTION, on the PREMISES, No. 5, West, Wilton-road, Pimlico, on TUESDAY, OCTOBER 9, at TWELVE for 1, by order of the Receiver, TWELVE powerful CART-HORSES, taken from constant work, and in excellent condition, the property of a contractor.—May be viewed on SATURDAY and MONDAY previous, and catalogues had on the Premises, and of the Auctioneers, 53, Parliament street, or Coal Exchange.

TO BUILDERS, MASONS, &c.—Two Hundred MARBLE CHIMNEY PIECES, executed in various designs and manufactured in a superior manner, WILL BE SOLD by AUCTION by Mr. W. A. OAKLEY on the following days:—WEDNESDAY, 7th OCTOBER; WEDNESDAY, 31st OCTOBER. Sale to commence precisely at THREE o'clock, and on the first day of each sale the last Day's Sale will consist of the larger class Chimney-pieces, suitable for Mansions, Public Buildings, and Clubhouses.—Westminster Marble Company, Earl-street, Holywell-street, Millbank.

$80,000 STOCK BRICKS.—TO CONTRACTORS, BUILDERS, AND OTHERS.

MR. D. A. RAMSAY is instructed to SELL by AUCTION, at the BRICKFIELDS, Goose-green, Peckham Rye, during the present month, in Lots, about 80,000 useful STOCK BRICKS. Note detailed particulars, and day of Sale, will be announced in future advertisements.—Auction and Estate Agency Offices, 70, King William-street, City, Oct. 5, 1855.

TO BUILDERS, CONTRACTORS, and OTHERS.—London and South-Western Railway Company's Wharf, Wandsworth-road, adjoining Brunswick House and the Nine Elms Station. Peremptory sale of about 2,000 Yards of White and Yellow Deals, to clear the wharf in consequence of the completion of the contract for the conveyance of materials for the Crimea.

MR. PEAKE is favoured with instructions from the proprietors to SELL by AUCTION, on TWELVE, in lots, about 4,000 WHITE and YELLOW DEALS, sawn and unsawn Fir Spars, Battens, &c. The choice Lots remaining for sale. Catalogues obtained at the Wharf, and at Mr. PEAKE'S Offices, 41, Tooley-street, Southwark.

SALES BY AUCTION.

May be viewed the day prior to and morning of sale, and Catalogues had on the Premises, and at the Auctioneer's Offices, 10, King's-road, Bedford-row.

TO BRASS-FOUNDERS, PUMP and WATER-CLOSET MANUFACTURERS, and OTHERS.

TO BE DISPOSED OF, by private contract, the STOCK, PLANT, and GOODWILL of a MANUFACTURING BUSINESS, carried on in London, established upwards of forty years, having a first-rate connection with plumbers, builders, &c. Satisfactory reasons can be given for the disposal of the same.—For particulars apply to Messrs. REDSDALE and CRADOCK, Solicitors, 5, Gray's-inn-square.

TO BUILDERS, CARPENTERS, and OTHERS.

TO BE SOLD, the GOODWILL of an old-established BUILDER'S BUSINESS, employing on an average thirty men, in a good situation in the county of Hertfordshire, within 15 miles from town. The stock could be taken at a valuation, or would be sold by auction on the premises, if declined by the party in taking the business. The premises comprise a newly-built House, with good garden, &c. yard and workshop, shed, &c. for coastal stable and cart-house, &c. Rent, 45l. per annum, on lease, the present owner being the freeholder.—For further particulars and terms, apply to Mr. W. R. GLASIER, Auctioneer, &c. 41, Charing-cross.

TO IRONMONGERS, WHITESMITHS, FARRIERS, and OTHERS.—TO BE DISPOSED OF, an old-established BUSINESS in the above trade, about seven miles from London, with extensive frontage, workshops, &c. and with every convenience for a good and improving trade. Rent and taxes low. Coming in, stock, fixtures, and seventeen years' unexpired lease, 200l. This is a most favourable opportunity for any person wishing to enter into the above, and whose means are limited. Satisfactory reasons given for the disposal of the same.—Apply to Messrs. PEELE and STEDALL, Broad-street, Bloomsbury; or to Messrs. BROOKE, BROTHERS, 9, Tothill-street, Westminster.

TO BUILDERS and OTHERS.—TO BE DISPOSED OF, in consequence of the death of the Principal, an OLD ESTABLISHED BUSINESS, with immediate possession, producing upwards of 300l. per annum, forced (or with all the Materials) Lease of House, which is let at a low rental. It is situate about five miles from the Metropolis, and in the most delightful vicinity of the Crystal Palace.—For further information apply to Mr. SIDE, the Academy, 60, Union-street, Borough; or Mrs. COLLINS, opposite the Crown, Dulwich.

TO CABINET-MAKERS, the BOTTLING TRADE, and OTHERS.—A strong FOUR-FLOORED WAREHOUSE TO LET, by the Rod or together, in the heart of London. Apply to S. ROBERTS and CO. 65, Shoreditch.

TO BUILDERS, LINENDRAPERS, and OTHERS.—A CORNER SHOP-FRONT, with Mahogany Sash and Plate-glass, quite new, TO BE SOLD, for half price.—For particulars, apply at 61, Prebend street, New North-road, Islington.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX (Brad) & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, October 6, 1855.

Stock Freehold Houses and Building Land, Upper Holloway, and two Leasehold, St. John's-street.

MR. BOYES is directed by the trustees of the late Mr. Wm. Hall, to SELL by AUCTION, at GARRAWAY'S, on WEDNESDAY, 17th OCTOBER, 1855, at 2 for 3 precisely, in three lots—Lot 1, SEVEN FREEHOLD HOUSES, Nos. 3, 4, 5, 6, 7, 8, and 9, Gordon-place, near the Whittington and Cat, Upper Holloway. Lot 2, A plot of Freehold Building Land, opposite lot 1. Lot 3, Two Leasehold Houses with Shops, Nos. 60 and 61, St. John-street, Smithfield; let at 52l. and 32l. per annum. May be viewed by permission of the tenants. Particulars may be had of Messrs. Bisgood and Son, Solicitors, 38, Carey-street, Lincoln's-inn; at the Archway Tavern, Upper Holloway; at the Angel, Islington; and at the Auction Offices, 3, Aberdeen-buildings, Lombard-street.

Nos. 121 and 123, GOSWELL-STREET. TO IRONMONGERS, COACHMAKERS, WHEELWRIGHTS, ENGINEERS, BUILDERS, CARPENTERS, and OTHERS.

MR. ARBER will SELL by AUCTION, on the PREMISES, Nos. 121 and 123, Goswell-street, on WEDNESDAY, OCTOBER 10, at TWO for THREE precisely, by direction of the Executors, the Stock-in-Trade of Messrs. HOWARD and Co., comprising about ten tons of Staffordshire iron in bars and rods; three tons of best spring and tire steel; one ton of patent cast steel; two tons of fine wrought nails, two tons of coach bolts, three tons of rivets, two dozen of grates and a variety of other articles in iron; two tons of cast iron weights, one ton of smith's tools, anvils and bellows, grindstone, moulds, mortice and other vices, screws, planes, stoves, iron rollers, gas, rain water and gutter pipes, fenders, fire-irons, a large quantity of brass-work; also the tools and fittings of a blacksmith's shop, a town-built cart, two gigs, a truck, two horses, four sets of harness, and miscellaneous effects. May be viewed two days previous and in frame of sale, when catalogues may be had on the Premises; and of the Auctioneer, 1, Wharf-street, Berkeley-square.

KNAP-HILL, ROSEHILL, and CHOBHAM, SURREY. — Freehold and long Leasehold Land and Cottages.

MESSRS. WATLRER and SON beg to announce that they have received instructions to SELL by AUCTION, on THURSDAY, OCTOBER, the 25th, 1855, at CHOBHAM, FIFTY-SIX ACRES of FREEHOLD LAND and COTTAGES, the property of the late Samuel Mumford, Esq.—Further particulars will appear in future advertisements, and may be had of Messrs. Mayo and Ayrton, Solicitors, Basinghall-street; and of Messrs. WATLRER and SON, Chertsey, Surrey.

INVERNESS BRIDGE WORKS. Sale of Plant.—To Contractors, Builders, and Wood Merchants.

TO BE SOLD by PUBLIC AUCTION, at TWELVE o'clock, on FRIDAY, 12th OCTOBER, in the shed of the extensive and valuable PLANT of the INVERNESS BRIDGE WORKS, consisting of one Measom and Hall's improved portable twelve horse power steam engine, fitted with gearing for punping. A Rochling power circular punching machine with drilling and planing fly-wheel driving; one three-power drill, with many cutters attached, on wheels; one Cross-kill's three-power drill; one ditto; two 4-inch pumps, two 3-inch ditto, one 2-inch ditto; one 6-inch ditto, with quadrants, &c. &c.; four sitting engines, with two rams; powerful double and single purchase crabs; machinery for five travelling gantries; a fifteen-ton stone-boat; a quantity of Memel and second timber; about a quarter of cord of chains, for the use of contractory tools, two sets of boring tackle; shafts and masons' tools; quarry crates and tools, &c. &c.

CHARLES CROTCHIE, Auctioneer.

Inverness, Sept. 28th, 1855.

BOARD of TRADE DEPARTMENT of SCIENCE and ART.—INSTRUCTION in ART.—TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL-MALL, LONDON.

Art-superintendent, RICHARD REDGRAVE, Esq R.A.

Head Master—R. BURCHETT, Esq.

The Courses of Instruction pursued in the School have for their object, the systematic training of teachers, male and female, in the principles of art and in the knowledge of its scientific principles, with the view of qualifying them to impart to others careful Art-education, to develope its relation to the requirements of trade and manufacture, and its application to the common uses of life. Special courses are arranged in order to qualify Schoolmasters of Parochial and other schools to teach Elementary Drawing as a part of General Education concurrently with Writing.

The Instruction comprehends the following subjects:—Free-Hand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera and Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling, include Architectural and other Ornament, Flowers, objects of Still life, &c., the figure from the Antique and the Life, and the study of Anatomy as applicable to Art. Also, Classes for instruction in the Technical processes of Design and Enamel Painting, Drawing and Engraving on Wood, and Lithography in Chalk and Colour. The two last Classes for female students only.

Hours of Study: Morning, TEN to THREE; Evening, SEVEN to NINE, daily, except Saturdays. Fees for each session, or part of the session. For Evening Classes only, 20s. per session.

The Class for Practical Geometry and Perspective, or that for Modelling and Casting may be attended separately on payment of a fee of 1l. per session.

Students have full access to the valuable collections of the Museum and library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students not in training, is at 37, Gower street, Bedford-square. Superintendent, Mrs. M'Ian. Fees per session,—Advanced Class, 2l. and 4l.; Elementary Class, 1l.; Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall-mall, London.

ARCHITECTS' BENEVOLENT SOCIETY.

PATRONS.

Sir Robert Smirke, R.A. | George Stanley Repton, Esq

PRESIDENT—Sydney Smirke, A.R.A.

TRUSTEES.

Sir Charles Barry, R.A. | Charles Robert Cockerell, Esq. R.A.

Philip Hardwick, Esq. R.A.

TREASURER—William Tite, Esq. F.R.S.

The List of Subscribers and Annual Report may be obtained of the Hon. Secretary. Subscriptions will be received by WILLIAM TITE, Esq. St. Helen's-place, the Treasurer; or by Mr. GOULD, the Collector, 8, Crane-court, Charing-cross.

J. TURNER, Hon. Secretary, 13, Wilton-street.

ARCHITECTURAL ASSOCIATION.—At the NEXT ORDINARY MEETING, OCTOBER 19, Mr GOODMAN will read a paper, entitled "An Architect's Office, its Management and Mismanagement." The CLASS of DESIGN will meet on OCTOBER 26th. Subject for sketch—"A Pedestal to a Statue."

T. W. GOODMAN, } Hon Secs.
J. A. BUNKER, }

Lyon's-inn-hall, Strand.

MINING SCHOOL in CORNWALL.—A School for the instruction of pupils in the following branches has been commenced, and is now in operation, at Truro, viz.:—

PRACTICAL MINING, including drilling, surveying, and general mine operations

CHEMISTRY, in all its branches, more especially as it is applied to mining and metallurgy.

MATHEMATICS, as applied to engineering generally.

Instruction may be obtained in any one of the above named branches separately.

The terms of admission are the payment of 20l. in advance for two years, or 12l. for one year. The period of attendance from the 1st October to the end of June, with the exception of a vacation at Christmas. A public examination will be held at the end of each session, when certificates of proficiency will be offered and an exhibition of 50l. will be awarded to the best qualified pupil, to enable him to proceed to the Government School of Mines, in Jermyn street, London.

Further particulars may be obtained on application to

W. H. BOND, Hon. Secretary.

NOTICE is hereby given, that a GENERAL QUARTERLY MEETING of MEMBERS of the INSTITUTION of BUILDERS' FOREMEN and CLERKS of WORKS will take place on WEDNESDAY EVENING next, at the BAY-TREE TAVERN, St. Swithin's-lane, for the purpose of transacting the usual quarterly business.

W. ALLARD, Secretary.

COMPETITIONS.

TO ENGINEERS and SURVEYORS.—TWENTY POUNDS PREMIUM. The Committee for improving the Drainage of the town of Cheltenham, in the county of Wilts, are desirous of receiving DESIGNS, together with the necessary plans, sections, and specifications, for efficiently DRAINING the TOWN: any drains already in existence to be taken into consideration, as far as may be practicable with an efficient system of drainage. The Committee offer a premium of 20l. for the best design—reserving to themselves the option of carrying out the design approved under their own Surveyor; or of employing experts to whom the premium may be awarded on the usual commission. The designs, plans, sections, and estimates, are to be sent to me (free of expense) on or before SATURDAY, the 27th day of OCTOBER instant. Further particulars may be had on application to me, either personally, or by letter.

JOHN BINGHAM, Jun. Clerk to the Committee.

Chippenham, Oct. 1, 1855.

CONTRACTS.

TENDERS are required for the FORMATION of some NEW ROADS, and the RE-MAKING of others, for the Drainage of the Dowlais Freehold Land Society. Also for the SUPPLYING and PAVING of the same, with Broken Stone. Plans, Sections, and Specifications may be seen at the Offices of Mr. WILLIAM WILLIAMS, Solicitor, No. 76, Cheapside, where TENDERS will be received until FIVE o'clock, P.M., on TUESDAY, the 16th day of OCTOBER instant.

OXFORD PAVING ACTS.—CONTRACT for PAVING.—Persons desirous of TENDERING for PROVIDING and LAYING down the CURB and PAVING of FOOTWAYS and GRANITE PAVING for ROADWAYS and other Works in the Oxford Improvements, for a term of One Year, from the 1st of JANUARY next, may see the specifications and lists of quantities of Mr. WILLIAM WILLIAMS, Solicitor, No. 76, Cheapside, at whose Office TENDERS will be received until FIVE o'clock, P.M., on TUESDAY, the 16th day of OCTOBER instant.

Tenders to be endorsed "Tender for Paving," and addressed to the Commissioners' Office, Town hall, Oxford, and to be delivered by the Contractors' Office on or before MONDAY, NOVEMBER 5, endorsed "Tender for Paving."

By order of the Commissioners,

FREDERICK J. MORRELL, Clerk.

PUMPING-ENGINE.—The Committee acting under the Hereford Improvement Act of 1854, are prepared to receive TENDERS from eligible parties for undertaking the CONSTRUCTION and ERECTION of a PUMPING ENGINE for the Hereford Waterworks. A description of the engine required, with all the particulars, may be known on application to Mr. T. CURLEY, C.E. Tenders to be sent in on or before TWELVE o'clock, on MONDAY, the 29th day of OCTOBER next, addressed to the Committee of the Hereford Improvement, and endorsed, "Tender for Pumping Engine." The Committee do not pledge themselves to accept the lowest or any Tender.—By order of the Committee,

T. CURLEY, C.E.

Hereford Improvement Office, 19th September, 1855.

CONTRACTS.

ORDNANCE CONTRACT.—To BUILDERS and CONTRACTORS.—Notice is hereby given, that TENDERS will be received at the Office, Pall-mall, London, on WEDNESDAY, the 17th of OCTOBER, 1855, before TEN o'clock a.m. from persons willing to undertake DEEPENING and WIDENING the DITCHES, and Repairs of the Parapets of Hilsea Lines near Portsmouth, according to Plans, Sections, and Specifications of Contract to be seen and every information obtained on application to Mr HAWKINS, Clerk of Works, at this Office, between the hours of TEN and FOUR o'clock on Week days (Sundays excepted).

Royal Engineer Office, Portsmouth, Oct 3 1855

ORDNANCE CONTRACT.—NOTICE to BUILDERS and CONTRACTORS.—Sealed TENDERS, addressed to the Director General of Contracts, Pall-mall, London, will be received until TEN o'clock on MONDAY, the 22nd of OCTOBER next, respectively endorsed RELATIVE to the ERECTION of Eight BRICK OVENS near the Old Barracks at Aldershot. Plans may be seen, and specifications of the work obtained on application at the Royal Engineer Office, Aldershot, on and after MONDAY next, the 15th inst., whereat may be obtained forms of Tender and all further information required. The Tenders to be marked on the envelope "Barracks," and endorsed, "Tender for Building Ovens at Aldershot." The Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Aldershot, Oct 10, 1855.

ORDNANCE CONTRACT.—To BUILDERS.—Notice is hereby given, that Tenders will be received at the Ordnance Office, Pall-mall, London, from such persons as may be desirous of undertaking the WORKS required for ERECTING a SECOND BARRACKS near Aldershot, in the County of Southampton, in accordance with Plans, Sections, and Specifications, which may be seen at the Royal Engineer Office, Aldershot, on and after MONDAY, the 15th inst., and at the Office of Works, at the Ordnance Barracks, Chatham, on and after MONDAY, the 22nd inst., whereat Forms of Tender may be obtained. The Tenders are to be delivered at the Office of Works, Aldershot, on or before the 5th NOVEMBER next, and when Forms of Tender may be obtained. N.B. The Ordnance reserve to themselves the right of rejecting all or any of the Tenders.

Portsmouth, Royal Engineer Office, October 10, 1855.

Royal Engineer's office, Portsmouth, 2d October, 1855.

NOTICE to BUILDERS.—Notice is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, from such persons as may be desirous of undertaking the CONTRACT for the ERECTION of proposed CASEMATED BARRACKS, and for the completion of the Fort behind Gomer Pool, Brown Down, near St. Helens, Isle of Wight, in the parish of Alverstoke, in accordance with Plans, Sections, and Specification in a locker at the Royal Engineer Office, Portsmouth, where also forms of Tender may be obtained. Every description of Tender must be delivered on or before the 5th NOVEMBER, 1855. The Ordnance reserve to themselves the right to reject the whole or any of the Tenders. No Tender will be taken of any Tender unless delivered in the printed forms, to be obtained at the Royal Engineer Office, Portsmouth.

NOTICE to BUILDERS.—Royal Engineer's Office, Portsmouth, October 8, 1855.—Notice is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, from such persons as may be desirous of entering into a CONTRACT for the ERECTION of proposed OFFICERS' MESS and SCHOOLMASTERS' QUARTERS, at Haslar Barracks and Fort Monckton, Gosport, County of Hants. Plans and Specification may be seen at the Royal Engineer Office, Portsmouth, where forms of Tender may be obtained every day Sundays excepted, until the 23rd OCTOBER, 1855. Tenders to be delivered by or before the 31st OCTOBER 1855. Tenders not printed forms, to be obtained at the Royal Engineer Office, Portsmouth.

RURAL DISTRICT OF TONTEIN PARK, NEAR LIVERPOOL.—PUBLIC HEALTH ACTS, 1848 and 1854.

TO CIVIL ENGINEERS and SURVEYORS.—The Local Board of Health for the Rural District of Toxteth-park, desire to receive PROPOSALS for a SURVEY and PLANS (the first of the kind), necessary to be made for publishing to the Local Board of Health, subject to the approval and to the approval of the Local Government Board, a Plan, Book of Reference, and Schedule of the Property to be taken and purchased under the Act, and the Plans and Sections of the Sewers, &c., intended to be made, the contract, accompanied by testimonials as to general experience and practice in such Surveys, &c., to be sealed and endorsed "Tender for Survey and Plans," addressed to "The Chairman of the Local Board of Health," and delivered at the Office, on SATURDAY, the 27th day of OCTOBER instant. The Local Board will not be responsible for any Tender not delivered as required. Further particulars and general conditions may be had on application at the Office of the Board, Park-house, Norris Green, Toxteth Park, where sealed plans may be seen. By order,

J. ROWLAND, Clerk to the Local Board of Health.

Public Office, Toxteth-park, October 8, 1855.

SEWAGE of the CITY of COVENTRY.—The Corporation for the City being desirous of making arrangements for the COLLECTION of the SEWAGE of the City, with power to sell and dispose of the same, are prepared to receive TENDERS or negotiations from any persons willing to lease or otherwise take the sewage of the corporation, for a term of years, as may be agreed upon. The sewage will be collected and discharged at one mouth, in a situation convenient for a site for the necessary buildings. The population of Coventry is about 50,000. For further particulars apply at the Town Clerk's Office, Coventry.

[For remainder of Contracts see next page.

CONTRACTS.

EAST LANCASHIRE RAILWAY. — To CONTRACTORS and BUILDERS. The Directors are prepared to receive TENDERS (save EXCEPTION of LOCOMOTIVE WORKSHOPS at Bury, comprising Erecting Shops, Machine Shops, Stores, Boiler Making Shops, Smiths' Shops, Foundry, Pattern Rooms, Plans and specification may now be seen at the Engineer's Office, Bury station. Sealed tenders, addressed to the undersigned, and endorsed "Tender for Locomotive Shops" will be received up to Saturday the 27th day of OCTOBER next. — By order, JAMES SMITHELLS, Secretary.

Bury, Lancashire, Sept. 19, 1855.

SHIPLEY WATER-WORKS — To WROUGHT-IRON TUBE MANUFACTURERS, BRASS FOUNDERS, PLUMBERS, and OTHERS. — The Local Board of Health, for the Local District of Shipley, are prepared to receive TENDERS for the following CONTRACTS:

For Excavating the Ground, Tapping Mains, Jointing, and Fixing Pipes, Cocks, and Plant (time for house service only required).

Specimens as may be required, and printed forms of Tender obtained, at the Offices of the Shipley Local Board of Health, Old Engineer, 24, Queensgate, Bradford, from whom any further necessary information may be procured. Sealed Tenders, properly endorsed, must be sent to me on or before MONDAY, the 22nd of OCTOBER next ensuing.

By order, JAMES THOMPSON, Clerk to the Local Board.

Bradford, October 1st, 1855.

TO CONTRACTORS AND OTHERS.

CONTRACT.—The COMMISSIONERS of HIGHWAYS for the ISLE of WIGHT are prepared to receive TENDERS for forming and completing a NEW ROAD from Little Park to Seaview, or the Red Lion, three miles westwards Carisbrooke, in the Isle of Wight, being in length about 1 mile and 2 furlongs, or thereabout, and including the carriageway of Ashey Down, Seaview, and Wootton Bridges, and for the purpose to make Footpaths and Gutters where required, to pull down Banks, and to execute and do all other necessary works, in accordance with the plans, sections, and specification to be seen for inspection at the Office of Mr. ESTCOURT, Clerk to the said Commissioners, at Newport. Persons willing to contract with the Commissioners of Highways for making the above improvements, are requested to forward Tenders, addressed "To the Chairman of the Commissioners of Highways," at the Guildhall, in Newport, on THURSDAY, the 25th day of OCTOBER instant, by TWELVE o'clock. Further particulars may be known on application to the General Surveyor, Mr. F. WHITE, Sandle, near Newport, Isle of Wight. The Commissioners will not bind themselves to accept the lowest Tender.

By order of the Commissioners,

CHARLES WYATT ESTCOURT,
Clerk to the said Commissioners.

Newport, Isle of Wight, Oct. 2nd, 1855.

TO BUILDERS AND OTHERS.

AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of well-seasoned Foreign TIMBER and MAHOGANY PLANKING of all descriptions. Also an extensive stock of Dry White, Yellow and Pine Cut Stuff, Skirting, Battens, Panelled Doors, Cask Heads, Sash Cases, Oak and Fir Planks, Deals and Battens, fetched from the docks, sawn by patent machinery in the best manner, and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London.

GREAT REDUCTION of PRICES.— It having now ascertained that the importation of Pine Planks will be unusually short this year, a great advance in price is the result, but by having a considerable Stock on hand, is still enabled to quote the following reduced prices: —

And every material required in the building, bell hanging, upholstery, and brass-foundry trades on the most reasonable terms.

List of Prices had on application at the Warehouse, or by letter prepaid.

EAST LONDON WATERWORKS COMPANY, Old Ford, 10th October, 1855. For SALE, near the Company's Wharf, at old Ford, TWO WROUGHT-IRON WAGON-BOILERS, from the Ajax Engine. Length, 24 feet; breadth, 6 feet; height, 8 feet 6 inches.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with the hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and self-acting spring hinges, and another gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Pivot and ornamental cast and wrought iron work, for railing and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, &c.

THE following are the PRESENT PRICES of PATENT SASH LINE:—

No. 3	4	5	6
4s.	5s.	6s. 3d.	7s. 6d. per gross.

At JOHN YOUNGS, Birmingham and Wolverhampton, Agent, Factor, and General Ironmonger, 18, Blandford-street, Manchester-square, coming out of Baker-street, Portman-square. Every other article equally reasonable.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,

THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

AUSTIN'S IMPERIAL

PATENT SASH and BLIND LINE, can be obtained of all ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY. Established 1774.

212° MILNER'S HOLDFAST and FIRE-RESISTING SAFES non-conducting and unrusting with all the improvements, under the Queen's Patents of 1854 and 1855, including their Gunpowder Proof Safes Lock and the new Bramah which defies picking.

THE STRONGEST, BEST, AND CHEAPEST SAFEGUARDS EXTANT.

MILNER'S PHŒNIX 212° SAFE WORKS, LIVERPOOL, the most complete and extensive in the world. Show-rooms, 6 and 8, Lord-street, Liverpool; London Depôt, 57a, Moorgate-street, City.—Circulars free by post.

J. MICHIE, Engineer and Machinist, Battersea-park, Nine-elms, manufacturer of all kinds of Steam-Engines, Portable and Stationary, Sawing and Planing Machinery, Pumps, Cranes, Crabs &c.

N.B. Several high-pressure Engines for Sale.

TO LOCAL BOARDS of HEALTH, WATER COMPANIES, and OTHERS.—The Swansea Local Board of Health have FOR SALE, about 1,000 yards of 12-inch cast-iron pipes of 10 and 16 inch NEW WATER PIPES, principally in 9 feet lengths, each length weighing about 7 cwt. The pipes are of good strong quality inside and outside with Dr. Angus Smith's patent, and made by Messrs. Cochrane and Co. Woodside Iron Works, near Dudley. They have the Board wish to dispose of them (owing to their not being of a suitable size for their works.—Tenders to be sent in to Mr. EDWARD TOPLISS, surveyor, the Board Guardhouse, Swansea, from whom any further information respecting them may be obtained.

Swansea, Oct. 1, 1855.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

OFFICES { NEW YORK—71, JOHN-STREET. BOSTON—2, KILBY STREET. MELBOURNE—91, COLLINS-STREET EAST.

CORPORATE MARK—XLALL.—Granted by the Cutlers' Company, 1789.

Messrs. PARKIN and MARSHALL have also pleasure in stating that they are appointed Sole Wholesale Agents for the Sale of the undermained Articles, manufactured by Mr. ENOCH OLDFIELD TINDALL, Iron Works, Scarborough:—TINDALL'S PATENT PORTABLE MANGLES, WASHING AND WRINGING MACHINES, NAPKIN PRESSES, CURLING RANGES, LAWN OR SPORTS, SAWYER'S TRAP AND GRATE, CHAFF CUTTERS, OAT, BARLEY, MALT, AND LINSEED MILLS, BEAN MILLS, OILCAKE BREAKERS, PORTABLE SAW-MILLS, TURNIP CUTTERS, &c.

THE PATENT COOKING RANGES AND ROASTERS are now amongst the most complete and inexpensive before the Public, and are rapidly superseding the antiquated Ranges of our Country.

THE IMPROVED LAUNDRY STOVE will heat Fifteen Plate at once, occupies only 12 inches in space, is removable from one room to another, and will be found invaluable for Public Laundries and Private Families.

E. O. T.'S SANATORY GRATE AND TRAP is now acknowledged to be the best and most secure from effluvia (as well as not being liable to close), and can be easily fixed to any Grate.

THE MANGLES AND WRINGING MACHINES have been introduced into the Royal Household, most of the Public Laundries, and also into many thousand Private Families, who bear testimony to their efficiency and superiority over all others.

THE OAT BRUISERS AND CHAFF CUTTERS, like the above, unite cheapness with the greatest simplicity of construction, and only need to be tried to be appreciated. They effect great saving, and should be in every stable

Drawings of Mangles, &c. with Testimonials, can be had on application at Telegraph Works, Sheffield, or of the Retail Agents, who are appointed in almost every principal Town in the United Kingdom.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent,—Mr. HARTNELL, 71, York-buildings, Adelphi

PARQUETRIES AND BUILDERS.

PATENT CLIMAX DOOR-SPRINGS.—The attention of architects, builders, and ironmongers is particularly directed to the above patented improvement in door-springs, being the most perfect and durable yet invented. Their power at mid to doors of any size and weight, and they are warranted to stand the wear and tear of any bank, public building, or business establishment in the kingdom.—Drawings, with full particulars, may be had from the manufacturers, WEBB and GREENWAY, Steelhouse-lane, Birmingham.

CHUBB'S LOCKS, with all the recent improvements. STRONG FIRE-PROOF SAFES, CASH and DEED BOXES.—Complete lists of sizes and prices may be had on application.

CHUBB and SON, 57, St. Paul's-churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the great Exhibition of 1851, which marks the attention of Builders, &c. to his Stock of Iron (cased), Brass Fumbly, Nickel (cased and cut), Copper and Zinc Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, so much admired, &c. &c. &c.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 30 years, for the supply of Goods from the best Manufacturers, at the lowest prices.

11, Seel-street, Clerkenwell, London

No. 1851, Class 27, Section 3, BRITISH DEPARTMENT of the PARIS UNIVERSAL EXHIBITION, 1855.

TWO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Fancy of all descriptions for Gas fitting in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods. Bed Rails, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. &c.

RICHARD EVERARD'S Brass and Bell Foundry and Metal Warehouse, Nos. 10, 11, and 12, Charles-street, Long-acre, London

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK, also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-grates, and doors for the same, hot-water pipes, elbows, bends, stubs, double valves, stop-cocks, flange and chatelbows, &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Iron Bridge wharf No. 6, Bankside, London, near the Southwark Iron Bridge

DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by F. EDWARDS, SON, and CO. 42, Poland-street, Oxford-street, where it may be seen in daily use. The advantages of this grate consist in the smoke being perfectly consumed, no chimney sweeping being required, and a saving from 40 to 50 per cent. being effected in the cost of fuel.—Prospectuses, with testimonials, sent on application

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of arrangement, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO. opening to the Monument, London-bridge. Established A.D. 1700.

ROYAL POLYTECHNIC GAS FIRE. BUCHHOFFNER and DEFRIES'S PATENT The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S office, 147, Regent-street, London.

GAS COOKING-STOVES, for large or small establishments.—DEANE, DRAY, and CO. 1, Arthur-street East, London-bridge.

Testimonial respecting the Crystal Palace Kitchen, as fitted by DEANE, DRAY, and CO.

8, Richmond place, Hampstead, March 9th, 1855.

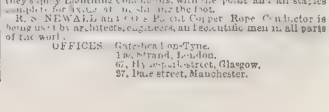
Gentlemen,—I have great pleasure in bearing testimony to the capabilities of your extraordinary Gas Cooking Apparatus, being the largest and most perfect yet in use. Suitable for hotels mansions, club houses, private houses, and the army; having cooked in one day four fowls and many cwts. of ham, beef, veal, mutton, lamb, tongue, &c.; roasting in one department a baron of beef weighing 300lbs. in four hours, fifty-three minutes, presented by J. Banister, esq. Threadneedle-street, to the directors, for the banquet given to the foreign marines. They have been in full operation for ten months, and are now in as perfect order as when first finished. "They have not cost one shilling for repairs."

I am, Gentlemen, yours respectfully,

EDWARD HORNE.

Messrs. Deane, Dray, and Co.

EXHIBITION PRIZES.—HARRISON'S PATENT KITCHENER cannot be equalled for the economy of fuel, cure of smoky chimneys, and for facilitating and improving the various operations of cooking. One on a very extensive scale, being the largest in the world, and roasting beef to cook abundantly for 1,000 persons, with one small fire, may be seen daily in operation at the Merchants' New Dining-rooms, Castle street, Liverpool, acknowledged by all to be the largest and most comfortable restaurant in the kingdom. Made in sizes to suit both cottage and mansion. Manufactory, Emscote Foundry, near Warwick; and Windsor Foundry, 63, Renshaw-street, Liverpool. Depôt, 43, Bathe street, Leamington



CUNDY'S PATENT PURE WARM-AIR STOVES, the only Pedestal Stove which gained a Prize Medal (class 27), at the Great Exhibition in 1851, especially adapted for warming, with great economy, Churches, Chapels, Schools, Entrance halls, Libraries, and Ware-rooms.—CUTLER and SONS, Sole Inventors and Manufacturers, 10, Great Queen-street, Long-acre, London.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show every article entered in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern book and price list, 1s.—55 and 56, High Holborn.

SAWING, PLANING, and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their premises in the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they continue their attention to the construction of machinery, and have had the honour of supplying some of the most celebrated companies and contractors in the world with their Machines for home and foreign use

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, patent enamelled from 82 to 86, Upper Thames-street.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the public, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at 1s. 6d. per foot.

R. S. NEWALL and CO.'s Royal Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES Gateshead-on-Tyne.

THE LIVERPOOL AND MANCHESTER

PATENT GALVANIZED CORRUGATED IRON WORKS,

AND IRON ROOFING MANUFACTORY.

Head Offices: 13, JAMES-STREET (late the Coalbrookdale Company's Premises), LIVERPOOL,

Where all Letters are requested to be addressed.

FRANCIS MORTON AND CO.

Beg to inform ENGINEERS, CONTRACTORS, and the PUBLIC that they have increased their manufacture of Corrugated Iron by the purchase of the machinery and all the working dies of the late firm of Messrs. PORTER, BROTHERS, and STUART, of BIRMINGHAM.

Parties accustomed to use the PARTICULAR SIZES of Corrugations heretofore manufactured by that Firm can be still supplied with the exact size from the same dies.

FRANCIS MORTON and Co. manufacture now a greater variety of Corrugated Iron either galvanized or black, than any other house in the trade, comprising every intermediate size from 2 inches up to 7 inches each corrugation, in all lengths up to 40 feet; also the angular or step corrugation.

STRONG PLATES CORRUGATED EXPRESSLY for FIRE-PROOF FLOORS, ROADWAYS, BRIDGES, PARAPETS; also FLAT ALL KINDS of ROOFING, RAILWAY WAGGONS, &c.

All kinds of GALVANIZED SHEET IRON ditto, expressly prepared for Tinmen's use; General Ironmongery and Iron Goods in stock or galvanized to order.

Trade Sundries, part wholesale with Galvanized Water-buckets, Wire, Poultry, and other Netting, of every size; Best and Charcoal Wire, of all gauges; Wove Wire for Ventilation, &c.; Galvanized Water-pipes, Eaves Gutters plain and moulded, Gas Tubing, much cheaper and more durable than lead; Water Cisterns, Wire Ropes, Window-sash Cords, Signal Cords and Pulleys; Copper Rope Lightning Conductors, with Points and Attachments, complete.

Fencing Wire and Telegraph Wire, in long lengths.

The inventor of the PATENT WIRE STAND FENCING, which is supplied and erected complete, at per yard.

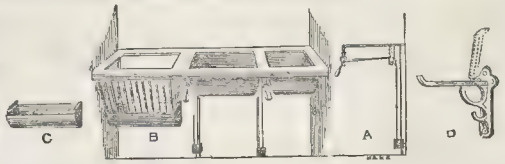
Wrought-iron FIELD GATES, CATTLE and SHEEP HURDLES, and DEER FENCING of every description.

The PATENT ASPHALTE ROOFING FELT, at 11 per square foot. Dry hair Felt for Deadening Sound, for Boilers and Steam Pipes, made in rolls 36 yards long, at greatly reduced rates.

Contractors for all kinds of Wrought and Cast-iron FENCING, PALISADES, ENTRANCE-GATES, and VERANDAHS.

Ships fitted with Wire Rope Rigging, Galvanized Chains, Anchors, &c.

THE TRADE SUPPLIED ON LIBERAL TERMS



Head Offices: 13, JAMES-STREET (late Coalbrookdale Company's Premises), LIVERPOOL;
Also 18, ST. MARY'S-GATE, MANCHESTER.

N.B. All kinds of Iron and Ironwork Galvanized, and Sheet-iron Corrugated at very moderate prices.

NEW PATENT INVENTION FOR STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street,

are made important additions to their original Invention of PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, the main features of which are shown in the Engraving.

A represents the Patent Halter guide and Collar-rein, the full of which is taken to the back of the manger-work with freedom and ease up or down the guide-bar, and is noiseless in its operation, as also a sure preventative against the most restive horse being cast in the stall.

B. The Patent Portable Seed box can be instantly detached from the rack without disturbing the hay. The saving of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

C. The Seed-box detached, made of galvanized sheet-iron, light and durable.

D. The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAMS MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, durable, and impervious to infection. Manufactured plain, galvanized, and enamelled.

IMPROVED SURFACE-DRAIN, with safety covers; sanitary Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Preserving Tubing and Horse Buckets, and every Article in Stable Furniture, at the Exhibition.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental, Hurdles, Strain Fencing, &c.

Estimates and Catalogues on application.

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

A. MOREWOOD and CO. (late Morewood and Rogers),
Dowgate Dock, Upper Thames-street, London, and Baskerville Works, Birmingham,
PATENT GALVANIZED TINNED IRON, and GALVANIZED IRON in Sheets
PLAIN or CORRUGATED, and Cut to all Gauges
Manufactured here is always kept in stock, such as pails, scoops, bowls, dishes, skips, &c., of all sizes.
Also the Patent Galvanized Tinned Iron Tubes, Gas and Water Tubing, Stamped and Moulded Gutters, Wire, Wire Netting, Hooping, Nails, Rivets, &c.
Estimates given for Roofs, or every description of Galvanized Boiling at the
OFFICES and WAREHOUSE, DOWGATE DOCK, LONDON.

SKAIFE'S GALVANIZING WORKS,
Commercial road, Limehouse, London.
Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where iron not liable to rust is required.
Patent Galvanized Iron supplied in every form.
Sheets 6 ft. and 9 ft. long.
J. Skaife sells Agent's Morewood and Rogers's Patent Galvanized Tinned Iron, Planished Zinc, and Files.
An Allowance to the Trade.

JOHN WALKER,
MANUFACTURER OF ROOFS, BUILDINGS, &c. &c.
Works—Mill-wall, Poplar.
Offices—Arthur-street West, London-bridge.

Ornamental and Constructive Ironwork.

LARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby destroying Smoke.
This invention is now in operation upon Steam-engine Furnaces, of Cornish and Wagon Boilers, and upon Ovens. It is adapted to other descriptions of Furnace, such as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most perfect of the inventions extant in subduing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.
Ten furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS, BROTHERS, Nine Elms, London.
Address, THE SMOKE BURNER COMPANY, Nine Elms, London.

THOMAS EDINGTON,
PURCHASER and INSPECTOR
OF
CASTINGS on COMMISSION,
17, GORDON-STREET, Glasgow.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

CHEAP AND DURABLE ROOFING.

By Her Majesty's Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen, who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured by which a saving of about 25 per cent in fuel is effected. The TRADE are respectfully requested to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION as FOR ONLY WORKS in Great Britain where the above roofing is made are F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt to be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament. A Liberal Discount allowed to the Trade.

TERRA-COTTA WORKS, Blackfriars-road, London. The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA-COTTA to M. H. BLANCHARD, late of Conde's Original Works, and successor to them in the manufacture of this invaluable material, that has been so successfully adopted for nearly a century in this country, by our eminent architects and others, for the adornment of our noblest buildings, and is the only tried material that is capable to stand the ravages of time unimpaired. Groups, Statues, Vases, Fountains, and Architectural Embellishments, at prices and quality that will defy competition. A large assortment of newly designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice

BLASHFIELD'S PATENT TERRA-COTTA, Manufactured at Mill wall, Isle of Dogs.—Capitals, Consoles, Tracery for Parapets, Balusters, String Courses, Friezes, Bas-reliefs, Vases, Statues, Chimney-shafts, and all other Architectural Ornaments modelled, finished, and burnt, in the best manner, and warranted to stand heat and frost, either in Buff or Red-coloured Terra-cotta.—A great variety and large stock may be seen at BLASHFIELD'S Warehouse and Show-rooms, No. 1, Praed street, Paddington.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in the manufacture of impurity in the material primarily made use of to produce it, in the imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street City; FREDERICK BRABY, Whole-sale and Retail Agent, 8, Tottenham-court, New-road. In Manchester and Liverpool by R. CLAY, 8, Mersey-street, who is the only authorized Painter to the Company for fine paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 28, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

METROPOLITAN BUILDINGS AND METROPOLIS LOCAL MANAGEMENT

Now ready, price One Shilling and Sixpence,

THE NEW METROPOLITAN BUILDING ACT, with Appendices, containing (1) the Arbitration Clauses of the Companies Clauses Consolidation Act. 2. The unrepealed Clauses of the two preceding Building Acts. 3. The Building Dictionary. 4. Clauses of the Local Management Act.—

By E. W. LOWER, Architect, Surveyor to the Office of Metropolitan Buildings.

The New Building and Local Management Acts may be regarded as supplemental, the one to the other; and it may be observed, that the former is in the hands of the architect or builder, while the other would be like unto the hands of the district lawyer, without whom, whilst as regards the Local Management Act, it may be said that it concerns every architect, builder, house-owner and householder in the Metropolis.

WATERLOW and SONS, 49, Parliament-street; and 24 and 25, Birchin-lane.

THE CHEMISTRY of BUILDING MATERIALS.

TO THE EDITOR OF THE BUILDER.—If Dr. George Wilson will pay a visit to the Quarry of the Bolmanted Stone Company, at Burridge Wells, he will see a natural development of all the qualities which he considers requisite in a good building stone, in fact his very points set forth precisely as the advantages possessed in the Bolmanted Stone by this hardening process. He will observe an effect in stone hitherto unattainable in every respect, that can be moulded into any form, at a far less cost than stone be chiselled in working the softest of freestone.

(Signed) N. E. STEVENS.

THE EXHIBITION of the PHOTOGRAPHIC PICTURES by ROGER FENTON, Esq. of the SEAT of WAR in the CRIMEA, is NOW OPEN at the Gallery of the Water-colour Society, Pall-mall East, from TEN till SIX daily. Admission, One Shilling. Catalogues forwarded to the country on receipt of six postage stamps.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," solicits his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 32, Albany-street, Regent's-park.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural and Civil Engineering, Drawing, and Colouring. Mahin Pinished and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, &c. &c. Terms Two Guineas per Quarter; Evenings Two Guineas per Quarter, which includes Drawing Boards, Squares, Plans, Drawings, Models, &c. For Prospectuses apply at the Offices, 24 Guildford-street, Russell-square.

THE ARCHITECTS, BUILDERS, CIVIL ENGINEERS, and MECHANISTS DRAWING CLASSES, Offices, 15, Oakley-street, City-road, conducted by Mr. T. J. HILL, Architect, &c. The course of instruction comprises the preparing of plans, elevations, and sections of architectural, mechanical, or civil subjects; preparing perspectives in pen and tint, &c. measuring and taking out quantities, estimating, &c. For terms of day and evening classes, as well as list of references, principally Architects, Builders, &c. (see prospectuses), which are to be had at the offices.

TO ARCHITECTS AND OTHERS.

MR. EDWARD L. PARAIRE is desirous of Meeting Gentlemen who require COLOURED ARCHITECTURAL DRAWINGS. External, Internal, Isometrical Perspectives got up; and use of some neatly coloured, with tasteful ground, on terms that will secure approval. Temporary assistance given in getting up Plans, Elevations, Sections, Detail, and Working Drawings.—Mr. E. L. P. makes a consideration in his charge where competition drawings prove unsuccessful.

Address, 8, Rathbone place.

MONEY on LOAN, at 3l. per Cent. per Annum. ARNEWAY'S CHARITY.—NOTICE is HEREBY GIVEN, that the Trustees of this Charity are enabled to lend out Money to poor necessitous or trades resident within the City and Liberty of Westminster, that is to say, within the Parishes of St. Margaret and St. John the Evangelist, St. Anne, Soho, St. Clement Danes, St. George, Hanover-square, St. James, St. Martin-in-the-Fields, St. Mary-le-strand, and St. Paul, Covent-garden. The amount of each loan is not to exceed 20l. and is to bear interest after the rate of 3l. per cent. per annum, and is to be secured by the bond of the borrower, with two sureties. Printed Forms of Application, and all necessary information, may be obtained by applying personally, between the hours of Ten and Three o'clock in the day, at the office of the Clerk and Solicitor to the Trustees, No. 14, Great Queen-street, St. James's Park.

By order, EDWARD S. STEPHENSON, Clerk and Solicitor to the Trustees.

NOTE.—The Trustees meet on the second Wednesday in every month, to consider such applications for loans as have been sent in one clear week at the least before the first day of the month.—The sureties must be unexceptionable.

SCOTTISH EQUITABLE (MUTUAL) LIFE ASSURANCE SOCIETY.

Established 1831.

At 1st March, 1855, the amount of the accumulated Capital (or stock) was	£910 00
And the Annual Revenue exceeded	165,000
The amount paid to the Representatives of Deceased Members was upwards of	60,000

This affords the strongest evidence of the continued prosperity of this Institution, and of the immense benefit to the families of deceased members.—For prospectuses and all information, apply to WILLIAM COOK, Agent.

126, Bishopsgate-street, London.

NORWICH UNION FIRE INSURANCE SOCIETY.

(Established 1797.)

Total Amount Insured, 63,000,000l.

Insurances may be effected with this Company upon more favourable terms than with other Offices.

For prospectuses apply at the Society's Offices, Surrey-street, Norwich, and 6, Crescent, New Bridge-street, Blackfriars, London.

THE ASYLUM LIFE ASSURANCE OFFICE, 72, CORNHILL, LONDON.

Established 1824.

Policies on healthy and unsound lives, at home and abroad, for civil, military, and naval employments.

The only Office on purely proprietary principles, involving therefore no partnership among policy-holders.

For prospectuses, proposal papers, &c. apply to

For prospectuses, proposal papers, &c. apply to MANLEY HOPKINS, Resident Director.

ROYAL POLYTECHNIC INSTITUTION.

Unceasing novelties. Re-engagement of S. Buckland, Esq. Entirely new series of dissolving views, by Care, illustrating the fashion of Ladies' Head Dresses from the time of the Conquest to that of our gracious Queen, with a less portion thereon by Dr. Trevethan, spicer. The unique and full-sized Collection, arranged in a new room. Dutton's curious Photographs of the Blood Globules; also Views of Paris and Thames Water, in the microscope. Lecture on the large Bar of Aluminium, and the Art of Coinery, by J. H. Pepper, Esq. Mr. Binge's new Dissolving Views with effects of the Attack on the Malakhoff, and Fall of Sebastopol, concluding with the Fireworks at Versailles, &c. &c. Admission to the whole, 1s.; except the Ornithological Collection, which shall be Free.

The Builder.

Vol. XIII.—No. 662.

BEAUTIFUL Paris! Wonderful Paris! Clever people! These have recently been the exclamations of thousands of our countrymen and countrywomen in that sparkling and exciting city,—exclamations fully justified. Such a sight as the Place de la Concorde, with its extraordinary vistas, its fountains, obelisk, and statuary, presents in the sunlight; and the Boulevards offer at night, with their thousand lights, bright lofty houses, and myriad people, talking, laughing, sipping,—everything but working,—is scarcely to be seen elsewhere. Great and costly works are going on, in the Louvre, the new Rue de Rivoli, the cathedral of Notre Dame, the church of St. Clotilde, and other structures and places. French manufactures which involve art command the markets of the world. The Paris *cafés* exhibit decorations of the most elegant and costly description: artistical sculpture is seen scattered on every side; and justly, we say again, may all exclaim, "Clever people! Wonderful Paris!"

So much, however, has been heard of this lately,—of the advanced state of the fine arts in France—of the glories of her capital—the rapidity with which municipal improvements are made, and the admirable effects which the French architects and artists contrive on all occasions to produce,—such stress has been laid on the superior powers of organization exercised by our neighbours, and the foresight which they exhibit, that we seem likely to forget that the bright picture has a dark side also, and, what would be worse, may assist in persuading our allies that they have nothing to improve, nothing to reform. There are many, many points on which our anomalous neighbours—so great and so little, so advanced and so backward,—may with great advantage take a lesson from what has been done in England. Shall we not go farther,—and say there are few things in which they could not do so. Incomplete and impure as is our water supply, compared with what it should be, that of Paris is not to be compared with it: open to objection as the state of our drainage may be, that of Paris is a hundred times worse. Many of the best-looking houses in Paris are, as relates to health, in a perfectly fearful and thoroughly abominable condition,—whited sepulchres literally and truly. At this moment the beautiful city contains a vast magazine of destructive materials, which may explode at any moment, carrying ruin and death into thousands of families. The danger to their brave troops from suspected mines in the Malakoff, when they first entered it, was not more imminent than it is to the home-staying citizens themselves from the unsuspected "sap" in Paris. You need not go into the slums to prove it. Don't go there, if you wish to keep a good opinion of Paris. We will travel no farther than to one of the chief establishments in the Rue de Richelieu,—say, the Hôtel des Princes,—where people are charged from five to ten francs a night for a middling bed up in the seventh heaven, and have the honour of paying two francs for a small sole for breakfast, and three francs for four penn'orth of boiled rice, called a *boudin de riz*. We mean no offence, but thus mark the great respectability of the house. Well, we have before us the personal evidence of four separate individuals, who, previously in good health, were here attacked on the same day and again afterwards with violent diarrhœa, sickness, and acute pains, distinctly attributable to the want of proper sanitary arrangements in the building. We looked into the circumstances ourselves, and can therefore speak positively. We have entered houses of a lower grade, so full of injurious emanations that healthful life could not possibly be maintained therein, and we have found, in such few inquiries as we were able to make, the people dying off, notwithstanding their out-of-door life and other advantageous circumstances, at such ages as would prove the truth of the assumption. Many of the houses contain a fever-still always at work. Paris is at this moment pervaded by foul smells and poisonous gases, rivalling in variety those sung by Coleridge in Cologne; and the advantages which Nature has given to this beautiful city are thus more than counterbalanced by the blindness and carelessness of man. Truly, 'midst all its beauty and its brightness there is no lack of materials for a book of "Paris Shadows," thick and threatening, and we would commend to those who are in power the special duty of forthwith stirring to lessen them. Beauty in front will not compensate for filth, disease, and death behind.

Even in the matters of Beauty, Taste, and Fitness,—administrative power and organisation, we must be permitted to say that the unqualified admiration that we are just now hearing of everything French will do much more harm than good. A catalogue of failures in these respects discoverable in the Universal Exhibition alone would not be a short one. The main building itself is ill adapted for the purpose: you have four stone walls, of no use but to keep out light, with a structure of iron and glass, *wholly independent of the walls*, put down within them. The unnecessary quantity of iron used would lead to the belief that the contractors were to be paid by the cwt. The galleries are so wide (85 feet), and so heavily constructed, that all beneath them is in darkness; and there, in consequence, you may wander in solitude through long alleys,—with ranges of cases on either side,—gloomy, depressing, and deserted. The staircases, as we have before noticed, are the best features of the building, and are unquestionably effective and elegant. On entering the great nave, full, by the way, of charming things, but as little to be compared, for general effect, to the Exhibition of '51 as Soho Bazaar is to this of '55, the small size of the building surprises one. You find that from "out to out" it is not very far from half the length of the building in Hyde-park (834 feet), but it does not look one-fourth the length. Why is this? A little examination will give a reason. The arched roof has gable ends at the terminations, and these ends occur not at the extremities of the building,—beyond the galleries,—but in a line with the *face* of the latter; and then, to make the matter worse, these ends are glazed with stained glass, representing,—one, France convoking all nations to the Congress (inscribed *La France convie les Nations à l'Exposition Universelle*); the other, Equity distributing recompenses to the deserving (*L'Equité préside à l'accroissement des échanges*), wherein the size of the figures is so great that they come close to the eye, serve as a deceiving scale, and interfere with the effect of the whole. Another error in judgment is shown in the great size of the stalls or cases, which are built up in the nave twice as high as they should be, or need to be. Look, again, at the shafting for the machinery in motion, in the Annex—as it is termed—ponderous and absurd; and with all its heaviness not without a great weakness in construction. The little piece of shafting put up by Mr. Fairbairn contrasts amusingly with it.

Much of the French furniture is very indifferent in taste (all praise, nevertheless, to many beautiful exceptions), carpets covered with sprawling flowers of Brobdignagian aspect, and paperhangings full of very violent contrasts. As to arrangement of specimens, notwithstanding the opinion expressed in a recent communication in our pages, there is little, if any: it is notoriously a failure:—those who seek examples of a specialty must search all over the three buildings for them. The duties of the jurors must have been very heavy in consequence.

In the Palace of the Fine Arts, the cold leadeny tones of the majority of the French painters (more eminent in design and drawing) give increased value to the colouring of the English School, which there shows itself with a power which the most prejudiced Briton could scarcely have hoped for. A walk through the English department is like going through a flower garden; and notwithstanding the poohpoohs and qualifications of the local critics, it is quite evident that they feel it so too. Passing up to the gallery,—the French architects have omitted to illustrate the present advanced state of practical architecture in France, having confined themselves, as we have already pointed out (p. 302), to academic studies of existing monuments and designs for restorations. Many of these are set forth in drawings of exquisite beauty, which should obtain the attention of our architectural students.

If, to continue our reactionary observations, we seek out of doors for specimens of bad taste in restoration, we may look at the work done at St. Denis, a few years ago, including most of the modern glass; and as to new buildings, the details of the Church of St. Clotilde are very indifferent, and the ornament on the front of the "Bibliothèque Impériale du Louvre," opposite the Palais Royale, has a barbaric richness, which Visconti could scarcely have designed. Even in the new street, the elongated Rue de Rivoli, wherein this front plays a part, we may ask why there should be no departure from the elevation which formerly prevailed there,—the only feature in which is the balcony on modillions to the windows of the first floor? A mile of this will be more than enough, nevertheless it will be a noble street.

And many, many other noble things are there in Paris,—Paris ancient, and Parish modern,—to some of which we shall hereafter refer. We are not afraid that our observations in the present article will be misunderstood. We have already shown in the short series of papers on the Universal Exhibition of 1855* (papers to which, after a careful re-consideration of the collection, we with confidence refer our readers, as conveying a good general notion of its contents), how highly we estimate its importance and beauty, and we have during many years borne willing testimony to the skill of our allies, the advantages they derive from early cultivation in art, and the good results which the capital exhibits. But we do, nevertheless, feel it right to protest against the indiscriminate praise of everything French now heard, as compared with what is done in England, tending as it does to increase vanity, already sufficiently great, and to justify the opinion, founded in ignorance, which has been expressed by one of their popular writers, that in matters of art we are still but 'varnished barbarians."

Paris is a wonderful city, and the inhabitants are a clever people: but they have still a vast deal to learn and to do.

Bells in New Churches.—A correspondent, who urges that our new churches should be furnished with peals of bells, to diffuse cheerfulness, gives a *list of prices* for *eight*, whose largest (or tenor) varies in weight (the hanging of them included) as cast at a well-known bell-foundry:—

Eight bells, tenor weighing	14 cwt.	£600
Eight ditto ditto	18 cwt.	715
Eight ditto ditto	20 cwt.	770
Eight ditto ditto	22 cwt.	845

* See pp. 253, 280, and 301, *ante*.

THE CHEMISTRY OF BUILDING MATERIALS.*

The word "*calcareous*" strictly signifies "of or belonging to lime," and implies the presence and, in general, the predominance of that substance in the body to the title of which it is prefixed; but it has long been extended, both by theoretical and practical men, so as to include bodies containing magnesia as well as lime, and chemists embrace under the term "calcareous earths" both of these substances.

The English word "limestone" has a similar meaning. It signifies a stone which certainly contains lime, but may also contain magnesia; and as these earths occur in limestones united with carbonic acid, so as to form carbonate of lime and carbonate of magnesia, a calcareous building stone or limestone may be defined to be a stone consisting in greater part of carbonate of lime, or of carbonate of lime and carbonate of magnesia. This definition has reference solely to the chemical composition of limestones, but their physical structure is of equal importance in estimating their architectural value.

Considered chemically, the calcareous building stones may be divided into three groups:—

1. *Simple Limestones* or *Limestones Proper*, consisting of carbonate of lime.
2. *Magnesian Limestones*, consisting of carbonate of lime and carbonate of magnesia.
3. *Composite Limestones*, containing, in addition to one or both of the calcareous carbonates, silica (sand), silicate of alumina (clay), oxide of iron, bitumen, phosphate of lime (bone-earth), and the like, and which are named according to the predominating additional ingredients, silicious, argillaceous, clayey, bituminous, or phosphatic limestones.

In the preceding enumeration, those recent aqueous calcareous deposits, called by geologists *calc-tuffs*, analogous to *stalactites* and *stalagmites*, are omitted, because, though used in other countries as building materials, they are unknown as such in Great Britain. Many of the Roman edifices, alike ancient and modern, are constructed of such a stone, called *travertino* or travertine.

Simple limestones, so far as their application in building is concerned, may be divided into three classes:—

1. Crystalline limestones or marbles.
2. Compact or massive limestones.
3. Oolitic limestones or roe-stones.

1. *Crystalline Limestones.*—Simple limestone is most perfectly represented by white statuary marble, such as that of Paros or Carrara. It may be regarded as chemically pure carbonate of lime, consisting of fifty-six per cent. of lime and forty-four per cent. of carbonic acid. Its structure is uniform and crystalline; the component crystals being very small, but closely adherent, so that it resembles loaf sugar, except that it is much less porous. The crystals are in thin scales, transparent, and plates of marble of considerable thickness allow a certain amount of light to traverse them, and are indebted to its passage for a portion of the peculiar lustre, so devoid of opaque chalkiness, which belongs to pure white marble. Its uniformity of structure allows it to be quarried in large blocks, and its comparative softness and crystalline texture to be easily chiselled, nor does any stone take a more uniform and beautiful polish.

The coloured marbles (properly so called) are all less pure than the white, the colouring matter being always some foreign body; but even where the tint is considerable, the amount of colouring matter is frequently very small, and, except for the purposes of the sculptor, their good qualities are as marked as those of the white marble. From this enumeration are excluded all the non-calcareous stones which, in the language of artists, find a place among marbles, and all the calcareous aggregates of fossil shells and corals, which will be considered under the head of composite limestones.

2. *Compact or Massive Limestones.*—Under simple limestones, we must include substances less pure than statuary marble; nor, in truth, is it possible to draw a line of sharp demarcation between them and the magnesian or the composite limestones. We must certainly refuse the title of limestone proper to any stone containing less than half its weight of lime, or less than 90 per cent. of carbonate of lime; but within these limits it may be justly enough applied, especially if no *single* ingredient makes up the percentage. Where small quantities of different bodies, such as water, bitumen, iron, alumina, and magnesia together, constitute 5 per cent. of a mass otherwise consisting of carbonate of lime, its suitability for building purposes is so substantially identical with that of the pure carbonate, that it may be included in the same category.

Marble, also, is rather an artist's than a chemist's or geologist's word, and may be applied to any limestone which, from its colour and susceptibility of polish, is thought worthy to become the vehicle of the sculptor's art; so that marbles and limestones shade away into each other, and do not admit of being placed apart in separate groups. What an Italian, for example, might refuse to call other than a limestone, an Englishman might honour with the name of native marble.

There is this distinction, however, between the marbles in their best examples and the limestones, simply so called, in theirs; that the marbles are crystalline, and therefore granular in structure, are easily wrought, and take a high polish; whilst the limestones are non-crystalline or imperfectly crystalline, are not granular but compact in structure, are harder and less easily wrought, and do not take a high polish; but the hardest limestone is much softer than any building sandstone, and is more enduring as a building material for outer walls in a climate like ours than a marble would be.

No stone is superior to limestone for building with, where the conditions of climate are suitable. In Great Britain, however, the fine crystalline limestones or marbles suffer rapidly, if freely exposed. They are soluble to a minute yet appreciable extent in pure water, which their porosity allows readily to enter. They are still more soluble in water containing carbonic acid, such as rain water or melted snow; and in water containing the products of combustion, viz.—carbonic acid, sulphurous, and sulphuric acid, which are added to rain when it falls within the precincts of large cities, and especially when it runs over the roofs or walls of houses. They are liable to be splintered in cold weather by the freezing of the water retained by their pores, and are readily stained by the substances which enter these, and by the growth of the green *confervæ* which cover readily wet stones of all kinds. For sculpture, accordingly, to be exposed in all weathers, whether statuary or fine carving, they are unsuitable in climates like our own; but for ordinary building purposes, the marbles, especially the darker ones, would be suitable enough; and the non-crystalline or compact simple limestones are extensively employed all over the world as building stones.

3. *Oolite or Roe-stone Limestones.*—One of the most extensively employed limestones in England, throughout the eastern and midland counties, is named oolite, literally *egg-stone*, from its peculiar structure. It consists of a multitude of small spherical grains, resembling in colour and appearance mustard-seed, and adhering together like the ova or eggs which constitute the roe of a fish; hence its English name of *roe-stone*. The component particles vary in size from that of pin-heads to that of small peas; but when they exceed the latter size, the resulting mass is termed *Pisolite* or *pea stone*. The oolitic globules appear to have been formed by depositation of carbonate of lime from solution in water charged with carbonic acid. Agitation of the water in which they have been deposited prevented for a time the carbonate from falling quietly as a sediment, so that it gathered round separate nuclei, each of which became converted into a calcareous globule. These globules afterwards settled down to the bottom, and gathered together into a mass, ultimately consolidating into an oolite or roe-stone. The nucleus of each globule appears frequently to have been a crystalline grain of carbonate of lime, round which similar grains clustered, as we see a minute snow-flake attract others to itself, and become a large snow-feather—a spherical configuration not being attainable in the circumstances. Where the globules have been formed round particles of the same nature as themselves, they are solid, often radiated in structure, or simply compact; frequently they consist of consecutive layers covering each other, like the different coats of an onion. A stone consisting of such solid globules, adhering together without interposed cement, or only with a calcareous one of the same composition as themselves, affords the best building oolite, and may (as implied already) be as pure as the simple crystalline limestone. Such, for example, is the character of the oolite from Kelton in Rutlandshire, with which many of the public edifices in Cambridge, the modern portions of Peterborough and Ely Cathedrals, and some of the churches in London have been built.

In other cases, the component ovules of the oolite are hollow within, as if they had formed round a perishable nucleus, such as a particle of vegetable matter or a grain of salt, which has afterwards been decomposed and washed or dissolved away. Such hollow globules occur in the well-known Bath limestone, employed largely in that city and elsewhere—Buckingham Palace, London, among other edifices, being built of it. The same peculiarity of hollow ovules occurs to some extent in the most famous English oolite, the Portland stone, with which St. Paul's Cathedral and a host of other churches and edifices in the metropolis have been erected. When such ovules, by superficial disintegration, have their cavities laid open, these must afford a lodgment to water, dust, and smoke, and lead to the disfigurement and decay of the stone. Many oolites, accordingly, are found to give way very rapidly when exposed to atmospheric action, partly from this peculiarity, but also from the interposed cementing matter wearing at a different rate from the ovules themselves. Many limestones, in their general structure oolitic, contain also fragments of shells and non-calcareous matter. They thus approximate to the composite limestones, under which they will be referred to.

2. *Magnesian Limestones.*—The term magnesian limestone is applied to a compound of lime, magnesia, and carbonic acid, which occurs both in regular crystals, like those of Iceland Spar, and in rocky masses, forming whole mountains. The lime and magnesia are united with the carbonic acid as carbonate of lime and carbonate of magnesia, and as these can crystallize together in any relative proportion, different magnesian limestones contain very unlike quantities of their common ingredients. That variety, however, is considered the most typical and characteristic which contains the two carbonates united in equivalent proportions, *i.e.* fifty parts of carbonate of lime to forty-two of carbonate of magnesia, and forty-four of carbonic acid.

More than half this variety, which nearly resembles in composition the Bolsover limestone used in the construction of the Houses of Parliament, is thus carbonate of lime; and in all the varieties, it preponderates over the carbonate of magnesia. The majority of magnesian limestones contain, in addition, small quantities of iron, silica, alumina, and water, like the simple limestones.

The fact of a stone of the class we are considering having been preferred for the Houses of Parliament, shows the high esteem in which it is held in England. The Bolsover magnesian limestone contains about 10 per cent. of foreign matter, of which about one half is silica, and the other half water. Its specific gravity in mass is 2,316, and in powder 2,833, both being higher than those of Craigleith stone, which stands at the head of our sandstones. Its cohesive power is 117; that of Craigleith stone 111. In structure it is semi-crystalline, and it is little altered by the atmosphere.

Throughout England, and especially in Yorkshire, many buildings exist constructed of magnesian limestone from different quarries. Some of those edifices date from the twelfth, thirteenth, and fourteenth centuries, such as Beverley Minster, Knaresborough Castle, Roche Abbey, Spofforth Castle, and are still, in great part, in good condition, and in some cases in perfect preservation. It is not surprising, therefore, that the reporters on the stones most

* See pp. 465, 467, 471, and 479, *ante*.

suitable for the Houses of Parliament should have given the preference to magnesian limestone, not only for them, but for all edifices. They are as lasting as most sandstones, have as pleasing a colour, and are more easily and economically wrought.

It is not denied, however, by the reporters, that some magnesian limestones, not apparently different from those which are so lasting, decay with great rapidity, as a large portion of York Minster and many of the churches of York illustrate.*

REVIEW OF ARCHITECTURAL DOINGS.

THE ARCHITECTURAL ASSOCIATION'S CONVERSAZIONE.

The Architectural Association commenced the session on Friday evening, the 5th; Mr. Alfred Bailey in the chair. It was stated in the report read by the secretary, that the subject of the formation of a Lending Architectural Library had been under consideration, and the committee had resolved to carry it out—the subscribers not to be formed exclusively of members of the association. In consequence of the interest taken in the paper on architectural diplomas, it had been determined to memorialize the Royal Institute of British Architects on the subject.

On the motion of Mr. Rickman, seconded by Mr. Hovenden, the report was adopted.

The Chairman said, meetings like that, when they were accustomed to deviate somewhat from their ordinary routine of proceedings, were extremely useful to the association, and maintained their connection with the profession and the public. They had also been thereby enabled to profit by the kindly advice and encouragement, and often by the not less kindly censure, which had been expressed by that portion of the profession which, though not enrolled in their numbers, had always taken an interest in their proceedings. With reference to the affairs of the society, he certainly was afraid that, from want of energy, they had gone in a backward direction, and he called upon the profession generally to help them to scotch the wheel. He thought that the society had suffered rather from over-management: while thinking of their society, they had forgotten their art. In an architectural point of view, the present year had been one of the least eventful known for some time. They had no new buildings to notice, few antiquarian discoveries to rejoice in, and the architectural press had become almost silent. The present stagnation might at least be productive of some good: they might hope that by this time their old friend the National Gallery, yielding to the entreaties of his friends, had abandoned his intention of residing in the fashionable suburbs. Rumours were rife of new buildings round the Palace of Westminster, and large additions to Whitehall, but as yet they only existed in the blue books. The agitated question of the vacant ground near St. Paul's had almost dropped, and they were looking in vain for a new public building to discuss. There was, however, one question which ought soon to occupy their attention: what is to be done with Smithfield? He was afraid, if they were not on the alert, it would be covered with small houses. Now, he knew nothing which would so much improve that part of London, or would more benefit the inhabitants generally, as to take this opportunity of making a public place. With the exception of Trafalgar-square and the Poultry, we have not one open space which can be rightly called public. What a lamentable compound of ugliness, exclusiveness, and melancholy dulness, do most of our London squares present! There were few small possessions more coveted by cockneys than the right of way to an iron gate,—the right of trapball to a piece of green. In this age of new inventions, he never remembered seeing a new design for laying out a London square. They are all concocted on the old recipe,—the same iron railing, the same privet hedge, the same wallflowers, the same central rustic temple, the same level walks and ground, and the same gardener of sixty-five years of age. When he said the same iron-railing, he was not quite correct; there were in London three different varieties of this interesting feature,—there was the Bedford railing, the Grosvenor railing, and the Portland railing,—all other patterns were only impertinent imitations of those three great species. Some of the squares had, it was true, certain local peculiarities,—some had pumps, some had not; Berkeley-square had a revolving-pump, and the pump in Hanover-square must be seen to be appreciated. A few squares only were enlivened with lilac trees, and the blossoming of the almond tree in Grosvenor-square was the annual event of that locality. It only remained to notice that some of our squares were adorned with statues of great British worthies, such as John, Duke of Bedford, or Charles II. or George IV. As a kind of relief to this exclusive dulness, would it not be possible to obtain the space now occupied by Smithfield for a real public square, without railing or privet hedge, adorned by suitable ornaments, and a few statues of really great men, which might conduce to the health, enjoyment, and ornament of a part of the metropolis which much needed all three? A subject to which the attention of architects had lately been directed, and was likely to be still more so, was the arrangement of cemeteries. Competitions offering amounts of a very inadequate kind, had lately been advertised. Still there was something to be said on both sides: the projectors fixed themselves with a limited sum of money—a misfortune which was this year remarkably common: joined to this deficiency of funds, they had also a legal obligation to construct a cemetery as soon as possible, and if they were obliged to make pence do the duty of shillings, it was not their fault. Be that as it may, the architect's part in those cemeteries had certainly not been done as it might. In all the designs for cemetery chapels that he had lately seen, they had the painful fault of being large churches in miniature, and there was no evidence of any attempt at those new ideas which an almost new subject might be expected to bring forth. There was one class of private buildings which seemed to bid fair to alter the character of all the large towns of England. He alluded to the large warehouses of which we have lately seen such noble specimens, especially in Manchester. These afforded a very fine field for new thought on the part of the architect. He trusted he might not be considered over fastidious, when he said that the very handsome buildings of this class recently erected, struck him as having one defect—they were too like palaces. He did not object to the ornament lavished on them, but he did object to the mode of fenestration—a number of windows spaced out after the manner of an Italian palace, which always give the idea of a number of apartments, and not of vast storehouses on each floor. Cannon-street resembled too much a large street of mansions and club-houses. Now, it had generally been considered right in architecture, that external design should give some evidence of internal distribution. In this respect our warehouses failed. He would suggest that an arrangement either of a few large windows, or a large number of small ones close together, would be more appropriate than the present practice. The latter was the arrangement common in the old Italian town-halls in every age, and admirably it gave the notion of internal space. Warehouses seemed also to afford great opportunity for the development of brick design, but the experiment had not yet been tried. Of new discoveries in the antiquarian part of their art, this year had been barren. He could only hope that in the course of this session, their member, Mr. Boutcher, would have something to tell them of his wanderings in Asia Minor, and of his recent experience at Nimrod and Wurka. He could not help here alluding to the new field which seemed recently to have been opened to the student in ancient art—when we shall have become masters of the Crimea (he did not pretend to fix the date). He sincerely trusted that some traveller in Greece or Turkey would extend his wanderings to the seat of war, and give us something more than the present vague accounts that we hear of the old buried Pompeii on the Heracleotic Chersonese; of the sepulchres of an ancient race which lie buried under our own dead in the caves of Inkerman; and last, though not least, of the old palace of the Tartar Khans at Batchki-Serai. He could not leave the subject of ancient art without expressing a hope that the directors of the Crystal Palace might some day be induced to add two more fine-art courts to their collection at Sydenham. Among their illustrations of ancient art they have given us an Assyrian Court, an Egyptian Court, and a Pompeian Court; but from them nothing could be gleaned of the art of that wonderful people, the ancient inhabitants of the Italian peninsula. A complete restoration of an Etruscan tomb, paintings and all, would be a valuable contribution to art history. Having given us an Etruscan Court, he could not but wish that, with Mr. Fergusson's assistance, they might one day see another court containing numerous illustrations of the architecture of India. Two books that had been recently published could not be passed over in silence. They had Mr. Street's "Notes on the Gothic Architecture of Northern Italy," garnished with his own peculiar views as to the universal applicability of Gothic art, extremely ably written. Now that they were becoming so alive to the beauties of Italian Gothic art, a good and cheap book on the Gothic of the south-eastern part of Italy would be very valuable. During the recent dearth of art-literature, no book could have been more welcome than Mr. Pettit's "Notes in France." It had given them information about a neighbourhood which students had strangely neglected, and had arranged and classified the early French Mediæval styles in an entirely new manner; and the chapters which treated of the Angevine, the Perigueux, and the Auvergnat system of vaulting were of the greatest value. He had read nothing lately more abounding in sterling originality and unostentatious common sense than the last chapter, the views in which Mr. Pettit had still further elaborated in his recent paper at the Institute of British Architects. Mr. Ruskin had not favoured them lately with anything architectural. The piazza of St. Mark had been abandoned for Trafalgar-square; and they had been rather startled to hear that Mr. Maclise not only paints badly, but that he does it on purpose. He believed that he was justified in saying that they would shortly see a building in the north of England erected from Mr. Ruskin's designs, with the constructive assistance of an architect. He (the chairman), for one, was delighted to hear it. They were rather tired of his singular recipes, and were anxious to see the pudding itself. Let them wish it every success, and may it be as rich and juicy as the mind that made it. But if it should turn out a failure, if it should prove flat, crude, and indigestible, then by every architectural stomach in the kingdom they would not spare him. The excuse about the Edinburgh windows, "that he did not care to perpetuate them," would not avail him now. They were much in want of new books, treatises, or other information on new modes of construction. They had recently adopted so many new applications of material, that the old and valuable treatises on the strength of materials were not enough. The results of a series of well-conducted experiments on bent timber and laminated ribs would be of incalculable value, and they were strangely deficient, even now, in proper information with regard to boiler plate girders. If it were not presumptuous, he would there make a humble suggestion to a senior society. It was no secret that the Royal Institute of British Architects intended shortly to remove to other premises. It would be a great boon to the profession generally, if these premises should contain a yard or other open space fitted up with an hydraulic press and other apparatus, where architects would find facilities for making experiments on building materials. The only place where an architect could prosecute such researches was a builder's yard, and the builder was just the man to whom the architect did not wish to be under obligation. As the report had told them, they were about to memorialize their seniors to set on foot a public architectural examination, and an honorary diploma. It might perhaps be thought somewhat presumptuous in a junior society to take the first step in such a matter; but that was surely a mistaken view of the case. The institution of a public architectural examination

* To be continued.

must be the work of the old and experienced, but it was no less the duty of the student strongly to insist on its necessity. He knew well that in these days of free trade it would be idle to insist upon that examination being a compulsory one, nor was that necessary. To say that no man could give an opinion as to the safety of a parapet, or the construction of a chimney-pot, without having passed an examination, would be manifestly absurd, and he had often heard this kind of argument used against examinations altogether. Let the examination only be a good one, and a stiff one, let the "plucking" be probably numerous, and he was sure that there would be no necessity for a penal law to create candidates. Among the gentlemen he was addressing, there were many of great practical experience; he appealed to them if they recollected many things in their own career more harassing or more difficult, than the process of getting their first job? If they could only begin practice with their second job instead of their first, the necessity for a public examination would be much lessened. A wants to build a house, and likes to encourage rising talent; he hears that B and C are clever young men; he calls on both. B is asked what he has executed in his own name: "Nothing," says poor B. "And you, Mr. C.?" "I, sir, have covered the suburban estate of the Toe and Heel Land Society, with third-rate houses." B retires within himself. But if B could only have said, "I have passed my examination with honours," and C, in spite of his third-rate houses, was egregiously plucked, B would be deservedly employed; and C would grind again, go up again, and perhaps again, would eventually pass, and be a good architect instead of a bad one. Another thing which this examination would effect, would be to protect the architect from the quack. He was not going to indulge in any solemn rant about the dignity of the profession; a man who was always talking of the dignity of his profession, lost dignity himself at every boast. Provided a design be good, he would honour the name who made it, whether he be architect, builder, engineer, or what. If the design were bad, he would abuse the man that made it; not because he was, perhaps, a builder, but because he had made a bad design. The only qualities which the public cared about, or ought to care about, in a professional man, were capacity, industry, and integrity; and the public would go to find these where they could get them best and cheapest, for brains are always a marketable commodity, and every architect has a right to sell them at whatever price he pleases. When therefore, he spoke of quacks, he did not allude to the quacks from without. They could build them down, but nothing less than a public examination would purify the profession of the quacks within their pale. Those were a numerous and a daily increasing class. They were not to be found in the first ranks of the profession, and not often in the second; but in the third rank their name was legion. It was quite time that these men should be exposed, because many of the respectable portion of the profession were quite ignorant of their existence. They were in fact a modern invention, and he must in justice add, they were not always young men. Those were the men that make a trade by practising on the good nature, the inexperience, and often the dishonesty of competition committees: they compete under the cloak of a secret motto, which is a mere sham, and which they know to be so; and then, if their roguery should prove unsuccessful, they are the first to denounce the committee whom they helped to corrupt, and the system of which they were the authors. These men were generally wholesale takers of pupils, with premiums varying in proportion to the means of gullibility of their parents and guardians. These pupils, not cared for, but left to petrify over plans of estates, the five orders, and the squaring of dimensions, in due time become quacks themselves, because they could not help it. How did these architects make their designs? He (the chairman) knew more than one of that class who could not draw a line with the ruling-pen. Their offices were nothing more than retail architectural shops, where second-hand articles were sold at more than their first-hand value. But where were these designs made? There were various small houses in the neighbourhood of Camden town and Islington tenanted by middle-aged men with large families, and apartments to let. In these houses designs in every style are got upon reasonable terms, and very often an allowance was made if the competition was not successful. On entering one of these small houses might be seen, in a low, chill, comfortless room, a man with a pale face and a sunken eye, but with the education and manners of a gentleman, sitting over a drawing-board — his post from early morning till often long past midnight. He was early used to work. In the days of his pupilage he did the same. He studied hard, his heart was lighter, his eye was brighter, and his cheek was fuller then. Many a joyful night did he once spend over that assemblage of columns in a dingy frame which hangs over his mantelpiece, and for which he did *not* get the gold medal in 1836. Just look at him now. The boy's enthusiasm for a glorious calling has all passed away, to give place to the set, stolid, indifference of a *blasé* being without any pursuit but his drudgery, which, from constant habit, has become for him a sort of mechanical dram-drinking. Weak and poor indeed are the designs he makes: how could it be otherwise? To him they would bring no fame. Where could excellence exist where ambition is not, and where the only object is to earn a miserable pittance for a struggling family? It was thus that a fine nature was spoiled, a thriving charlatan encouraged, and one more ugly building went to swell the number of those that have been manufactured in the same way. He (the chairman) believed it was the first time since the association had been established that it had been the painful privilege of their president to allude to the death of an old and valued member. Mr. Burt had been taken from them. His loss would be deeply felt by all; they would miss much his singularly profound, practical knowledge, his great facility for expressing his ideas, and above all, that candid and amiable bearing which endeared him to all who knew him. In conclusion, he could not help alluding to a circumstance much more pleasant than the last. He congratulated every student present that the chair of architecture at the Royal Academy was not, as had been feared, vacant. To criticise the lectures of Professor Cockerell would ill become one who had attentively listened to them for the last eleven years. On the substance of those lectures he therefore did not presume to offer an opinion, but on the manner in which they had been presented to them he conceived it to be neither presumptuous nor ungrateful if they took that opportunity of tendering to the professor their humble tribute of respect and gratitude. How many of them could remember that when the lecture was over, with what disinterested kindness their professor was ready to answer the question of the humblest student; and one thing more glorious than all was the sense of the fact, that the grey-headed man addressing them had not lost one tittle of the youthful enthusiasm of the discoverer of the Ægina Marbles, and that their accomplished professor was still, in the best sense of the word, as much a student as the youngest probationer on the back benches.

On the conclusion of the president's address, and at his invitation, Mr. Tite, M.P. who was present as a visitor, addressed the meeting. On the public topics touched upon he stated that he had no doubt whatever that the vacant space near St. Paul's was secured, and would not be built upon; that he had also no doubt the Corporation would keep Smithfield an open space; but that its appropriate, or rather fitting arrangement, so as to present any agreeable, or architectural features, was an object of great difficulty. He invited the sketching class of the society to turn their attention to the subject, and to make suggestions with this view. Mr. Tite then proceeded at considerable length to discuss the question of scientific education in England. He considered the great defects were, first, the want of a good sound elementary education, and then proper examination afterwards by the Institute, or some competent body, so as to give the scientific teaching at lectures, or in the architect's office, a proper direction. He accepted, so far as he was individually concerned, the offer to submit to a voluntary examination suggested in the president's address; but he thought that, in all government or public appointments, such as corporations, &c. no scientific position ought to be given without the fullest examination, such as existed at the present moment in France, or by the "Bau-verein," in Prussia. He regretted to observe a disposition in England to employ uneducated men, on the pretence of their practical attainments, which he considered must more advantageously co-exist with education, and which might at all times be easily found in combination. Mr. Tite, in adverting to the sketches on the walls, regretted the universal desire to introduce and study mediæval architecture in preference to the Italian, and in abandonment of the styles so elegantly applied by Perrault, Vignola, and Sir Christopher Wren, which he considered more appropriate and more convenient for social purposes than the frequently forced applications of the types of the Middle Ages. Mr. Tite concluded his address by pointing out the advantages of association, for the purposes of study and mutual advancement, such as this society afforded, and by urging its members to continued and renewed exertions.

EGRESS FROM THEATRES AND OTHER PLACES OF AMUSEMENT.

EXETER-HALL.

Some remarks in the *Builder*, in reference to the inadequacy of means of egress from the theatres, have opened up a question in which the public generally are much interested. I do not know much of the particular arrangement of theatres in this respect, but the deplorable deficiency of *exits* at nearly all places of public resort is notorious. With no small experience of large assemblies, I fear that it will only be when some lamentable catastrophe has occurred that due attention will be given to the subject.

With the professional knowledge you can bring to bear, you will do good service by using your best exertions to mitigate the evil.

In the hope that you may be induced to do so, I have much pleasure in placing at your disposal information in reference to Exeter-Hall, which enjoys a most unenviable notoriety in this respect.

The large hall may be taken as capable of seating 3,000 persons. It has but three points of exit, their united width being about 18 feet. There are two tiers of offices under the large hall, so that at least fifty steps have to be descended before the street level is gained. It does not require much discrimination to perceive that a building used for large assemblies, at a considerable height from the ground, presents points of danger greatly in excess of one that is on the ground level. Two of the three staircases are very narrow, full of angles, and awkward turning points: in a time of excitement they would be dangerous. The third staircase, leading into the Strand, is wider, but it is nearly straight, with but one landing, and the danger resulting from a sudden rush down the fifty or sixty stairs composing it, may readily be noted by any one looking through the swinging doorway in the Strand.

In connection with the Sacred Harmonic Society, I have had twenty-one years' experience of the alarming deficiency of Exeter-Hall in this respect. Through this series of years I can testify to repeated complaints and warnings from all classes. The *absolute danger* has been frequently pointed out to the directors of the building, and, although opportunities have offered, and schemes readily practicable been proposed to them, yet they have been steadily ignored. That you may not think I am indulging in unmerited remark, I enclose you the report of the Sacred Harmonic Society for the past year: I refer you to page 30 therein.

Even this representation has passed unheeded, and thus matters are likely to remain, unless some authority interposes. It would be highly desirable that authority should reside somewhere to prohibit meetings in places of public resort unless previously certified to be safe and commodious. As the best means, therefore, which suggests itself to me to provide a remedy, I do intreat that you will follow up your

remarks. You may rely upon it that by so doing, you will do good public service.

It will be but little satisfaction to the relatives of those losing life by any such calamity as would probably ensue upon a sudden alarm taking place at one of the crowded meetings held in Exeter-Hall, to know that the four-and-twenty directors who watch over its interests were liable to answer a charge of manslaughter at the Old Bailey, as one of the results of their criminal negligence in this respect; and, therefore, in the hope that the old saying may be verified, that "prevention is better than cure," I do trust that you will draw attention to the subject. R. B.

COLOGNE.

On the 3rd of October the King of Prussia laid the first stone of a proposed stone bridge between Cologne and Deutz, designed by Herr Lohse. When he struck the stone, with the hammer with which he laid the first stone of the new works at the cathedral in 1842, the king said:—"The mercy of God has permitted us to commence this work in peace. Let us pray Him to grant that it may be continued in peace. Let us entreat of Him that it may flourish under the golden horn of plenty, of peace; that it may remain for ever and ever untouched, and that, long before the last stone is laid, all Europe, in peace, may be once more reunited."

Afterwards the king witnessed the depositing of the last stone of the south portal of the Cathedral of Cologne, which has been built at his majesty's expense. Herr Zwirner, the architect who superintends the work of continuation, spoke a few words *apropos* of what had been done and of what remained to be done—intimating his belief that the cathedral (except the great towers) could be finished in seven or eight years; but that, if the funds were augmented, two or three years at the most would suffice.

His majesty then went to lay the first stone of a new museum in the Minoriten-platz, for which funds have been provided, as we mentioned some time ago, by Herr Richartz, a merchant.

One of the most interesting stands in the nave of the Palace of Industry, in Paris, comprises Herr Zwirner's drawing for the portal of the cathedral, a number of large photographs, showing the progress of the works at different periods, and some of the prepared stonework itself, including a mighty finial, exceedingly well cut.

CHURCH-BUILDING NEWS.

Skellingthorpe.—The opening of Skellingthorpe new church took place on Wednesday before last. The church, dedicated to St. Lawrence, having fallen into great dilapidation, a meeting of the parishioners was held in 1853, and a resolution passed to restore and enlarge it. Application was also made to the Spital Hospital, who hold the great tithes, to restore the chancel. A survey was made in each case, plans were prepared, and the work was entrusted to Mr. Pope, of London, architect. The plan, as prepared for the new church, made it consist of the same chancel rebuilt, the same sized nave rebuilt, the north aisle widened, and an entirely new aisle on the south side, with a porch. The work was put to competition in May, 1854, and Mr. William Huddlestone, of Lincoln, builder, was chosen by the committee as the builder. On exposure by the removal of the nave, defects were discovered which rendered it almost necessary to rebuild the tower. The old tower was removed, the nave and aisle lengthened, another bay and an enlarged tower and shingled spire erected. The style chosen is that of the original chancel, Early Pointed English, and the church is finished as follows:—The chancel same width and length as originally proposed; the nave and aisle about 48 feet, and tower 16 feet square and 63 feet high, surmounted by a timber spire covered with shingle. The paving of the floor is of Minton's encaustic tiles, the chancel having ornamental ones. The roofs are all open-timbered, and stained. The chancel fittings are of oak; those of the nave and aisle stained deal. The pulpit and font are of Caen stone. The glazing is of cathedral caste, with stained and painted margins, and centres to double lights. Three windows, one in the tower, one at the west of north, and one at the west of south, were presented by Mr. R. Carline, Mr. Huddlestone, the builder, and Mr. Pope, the architect. Mr. Carline's is a figure of St. Lawrence, filling the window. Mr. Huddlestone's presents two groups,—Christ raising Lazarus, and Christ restoring the widow's child. Mr. Pope's has also two groups,—John baptizing Christ, and Christ blessing little children. Polychromatic decoration has been slightly used, and is progressing, Mr. Geo. Wallhead, of Lincoln, being the artist employed.

Horsenden.—The church here was reopened on Tuesday before last, by the Bishop of Oxford. The cost of the restoration was defrayed by the rector, the Rev. W. E. Partridge.

Newport (Isle of Wight).—The foundation-stone of the new tower of the church here was laid on the 3rd inst. by the mayor.

Weston-super-Mare.—On Wednesday week Lord Auckland, Bishop of Bath and Wells, consecrated the new edifice called Christ Church, situate on Montpelier, in this parish. The church is in the Gothic style, from designs by Messrs. Manners and Gill, of Bath, and is capable of accommodating 525 persons, including 250 free sittings. Mr. E. Gregory was the builder.

Wednesfield.—The new cemetery here was consecrated on Tuesday week, by the bishop of the diocese. The cemetery is situate about half a mile from the church, and is about two acres in extent, one of which was given by Mr. Pigeon, the other being purchased with subscription. It is enclosed, and is being laid out under the direction of Mr. E. Banks, of Wolverhampton, architect.

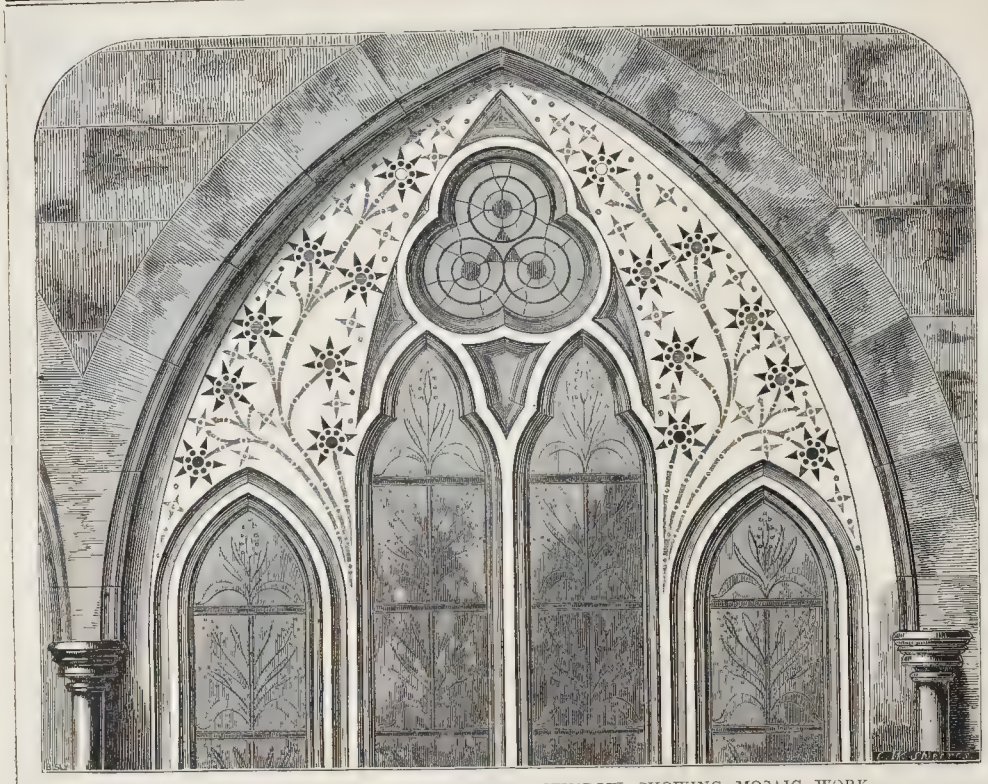
Chesterfield.—Scropton Church, built in 1111, has been taken down, and the first stone of a new edifice was laid on 27th ult. by Mr. J. Broadhurst, who gave all the workmen a dinner of old English cheer on the occasion.

Liverpool.—It is proposed, by way of memorial of the late Earl of Sefton, to place a memorial window in the west end of the parish church now erecting at West Derby. The foundation-stone of this church was laid by the late Earl of Sefton, in April, 1853. A subscription for the purpose in view has been opened in Liverpool.

Haslingden.—There are now in this town two new chapels being erected, the Independent, nearly completed, in Dearden-gate, and the Wesleyan, in Manchester-road. Extensive alterations are also being made in the roof, &c. of the parish church. The Roman Catholics of Haslingden have staked out ground for a proposed new chapel situate between the Ebenezer Baptist chapel and West View House.

Salford.—The recently decorated chancel of St. John's Roman Catholic Church, or Cathedral, Salford, was opened on Thursday in week before last, by Cardinal Wiseman. The church is cruciform, the upper arm of the cross being devoted to the choir and chancel, with Lady chapel, chantries, and side aisles. The whole of this part, including four entire bays, next what is called the east end of the church, has been walled up from the nave (at the point where the rood screen should divide nave from choir), for the last two years, with the object of completing the choir, and indeed all the internal work of that end of the church. It is now all but finished. The church stands nearly due north and south; but the old nomenclature is retained, for the end or choir window (nearly north) is called the great east window; what are really the east and west side aisles of the chancel are called the north and south aisles, and so on. Retaining the names given them, we may briefly mention the principal works of this part of the church, which may be generally characterised as in the Decorated style. The choir, from the place of the rood screen to the high altar, filling three bays, is enclosed by side screens, from the north and south aisles, with two entrances thence. At the lower end it will, for the present, be separated from the nave by the carved oak seats of the choir. At the upper end is the high altar, and its central canopied screen with lower screens flanking it. The other side of this screen, and reredos, is in the Lady chapel, which has its own altar and reredos, with piscina, &c. beneath the great east window. The Lady chapel has a private chantry on each side, the Lee chantry, on the north, being founded by Mr. D. Lee, and the Leeming chantry, on the south, by the family of the late Mr. John Leeming. Each of these chantries has its altar and reredos, its windows of stained glass, and its canopied family tomb. All the five principal windows at this end of the church (as well as the smaller clerestory windows) are of stained glass. The great east window, the gift of Bishop Turner, is the work of Mr. Wailes. The four chantry windows, as well as the brasses of the tombs, have been executed by Mr. Hardman, of Birmingham; and the groined roof has also been painted by him, azure, with gilded stars. The whole of the stone work is of fine Caen stone, with the exception of one altar frontal of Derbyshire alabaster, and the columns of two small arcades, which are specimens of the Devonshire porphyry. All the stone erections, sculptures, and carving, as well as those in alabaster, the carving of the oak seats for the choir, and the groined roof, have been executed by Messrs. Lane and Lewis, of Birmingham: the work has been done by about a dozen trained workmen of theirs, under the superintendence of Mr. Lane. The architects are Messrs. Weightman, Hadfield, and Goldie, of Sheffield. With the exception of the east window (the gift of the Right Rev. Dr. Turner), the whole of the works—choir, Lady chapel, chantries, and the side aisles, with the screens, altars, reredoses, tombs, windows, and roof—have been executed at the cost of two families, the founders of the chantries; and we are told that these works will not cost the Lees and the Leemings a less sum than about 5,000*l.*

Monkwearmouth.—Amongst the numerous cemeteries about to be formed in this neighbourhood under the new Act, that of Monkwearmouth appears to have made the greatest progress. The Episcopal chapel will soon be ready, and the Dissenters' chapel, lodge, and gateway, are in progress. The whole of the grounds are enclosed by a wall. The chapels, which are of stone, are detached, cruciform in plan, the nave forming the chapels, and the transepts forming, on the one side a reception-house for depositing the coffins, and on the other a vestry and porch. The chapels are both alike, in the decorated style of Gothic architecture, with bell turrets at the west gables, and accommodate 100 persons each. The lodge has a waiting-room and open verandah for visitors. Mr. Thomas Oliver, jun. of Sunderland, is the architect.



Elgin.—The walls of the towers of the cathedral ruins at Elgin, according to the local *Courant*, are now in course of repair. For some years back the stones were getting very loose, both lime and stone decaying. The Woods and Forests, therefore, employed Mr. Innes, of Bishopmell, builder, to cement the walls and replace decayed stones, and the greater part of this repair is now completed. A new iron gate, and new house for the keeper, are also contemplated. What does "cement the walls" mean? Surely not covering them with compo?

THE ARCHITECTURAL MUSEUM.

We would remind our readers that the Museum is open on all days of the week, excepting Saturday, from ten till four o'clock; and (from Monday, the 1st of October), till Wednesday, 19th December next, both inclusive, on the evenings of Monday and Wednesday from 7 till 9 o'clock. One guinea per annum makes a member: for students, the subscription is 10s. 6d. Admission to non-subscribers is 6d. for the day: Art-workmen have admission in the evening, free. Lectures will be delivered at the Museum during the autumn session, viz.:—

Oct. 15. On Heraldry in connection with Architecture, by the Rev. C. Boutell.
Oct. 29. On Architectural Metal Work, by Mr. Skidmore.
Nov. 12. On Form, Light, and Shade in Architectural Foliage, by Mr. J. K. Colling.
Nov. 26. On Colour, and its use in Architectural Art, by Sir Walter C. James.
Dec. 10. On the formation of a National Museum of Architectural Art, by Mr. Bruce Allen.

Moreover, an evening class for the *practice* of stone and wood carving has been organized. Some of our readers should avail themselves of it.

ALL SAINTS', KENSINGTON: CLERESTORY WINDOW, SHOWING MOSAIC WORK.

NOTES OF IRISH WORKS.

The new Roman Catholic church of St. John, at Limerick, is to be built according to designs by Mr. P. C. Hardwick (of London), architect.

It may be in the recollection of our readers that some years since a competition was advertised, and premium offered for the *best* design for this church; but after a lapse of many months, it seems to have been decided that *no* plan *was the best*, for the premium was *not* given, and the plans returned in some instances without a word of apology. This called forth some appeals to the public press, ourselves amongst the number, and we are even now informed that at the time the competitors' drawings were in Limerick, suggestions for the proposed building were taken in a substantial form therefrom. However, if such account be correct, the high professional character of the gentleman now engaged may at once set at rest any apprehensions as to plagiarism. We always, however, as a matter of justice to the profession, bring before the public complaints received of parties acting out of the usual course.

A new lattice girder bridge, by Messrs. P. Mc Swiney and Co. has been fixed on the Glanmire road, in connection with the terminus at Cork of the Great Southern and Western Railway. It crosses the south face of the tunnel at an elevation of about 17 feet, connecting the new road made by the company, and consists of two main girders of plate and angle iron, rivetted at top and bottom, and connected by lattice-work. The roadway is 31 feet, and footpaths 8 feet each. The roof of the goods store, 40 feet span, is supported by wrought-iron lattice girders, on the same principle. Messrs. Mc Swiney and Co. are stated to have several iron girder bridges in course of completion for Limerick and Foynes and Mullingar and Longford lines.

Additions are to be made to the barracks at Cork for the accommodation of an extensive force, according to the local journals.

The first stone of a new hospital under the direction of the Sisters of Mercy has been laid by Archbishop Cullen. The site is in the open space at the top of Eccles-street, Dublin, and the proposed building is to be called the "*Mater Misericordiæ*."

A new harbour and pier is to be built at Wicklow by Mr. John Killen, who has been declared the contractor.

A new church is to be erected between Richhill and Portadown.

CHURCH OF ALL SAINTS, KENSINGTON-PARK.

This church is situate near the northern extremity of the Ledbury-road, Kensington-park. It was commenced three years ago, and is now covered in and glazed. It is faced, both internally and externally, with Bath stone: this is relieved by the introduction of bands and arch-stones of coloured stone,—red, grey, and buff,—brought from Sudely, in Gloucestershire, Nailsea, in Somerset, and St. Columb, in Cornwall. The pillars of the nave are Devonshire marble: three of these are monoliths, and three coursed. Devonshire marble is also extensively used in the monials of the clerestory and other detached shafts. These are not yet fixed. The octagonal stage of the steeple contains a great deal of constructional colour, both in bands and in shafts.

Internally, the lower part of the walls, from the floor to the string all round, is lined with black, red, and buff tiles, and bricks in courses, the gradation of colour being so arranged as to increase in lightness upwards. The height of the lining also increases eastwards, *i. e.* in the transepts, chancel aisles, and chancel, by proportionate gradation. There is an extensive and lofty clerestory. The windows are in pairs: a portion of the head forming a spandril between the heads of the side lights and middle lights, instead of being pierced as tracery, is left plain, and filled with inlaid mosaic work. The design consists almost entirely of an arrangement of gold, red and blue circles, and triangles: on the inside of the church these are formed into flowers, and connected with green stems, as shown in our illustration. The colour of the green is chrysopase: that of the blue is turquoise, cerulian, and ultramarine. The workmanship of this was executed by Mr. Steven, of Pimlico. These windows internally have moulded Bath stone caps and bases, to receive detached marble shafts. The roofs are as yet neither stained nor painted. The window-sills of the north aisle are raised, for the formation of a cloister to connect the church with future domestic buildings. The span of the chancel is the same as that of the nave (27 feet 6 inches in the clear), and allows of the pier of the chancel-arch being very small, thus adding to the general effect of spaciousness. The glazing is in large rectangular panes of cathedral tinted glass, separated in their height by bands of blue and ruby. Each pane extends from mullion to mullion, and is from 10 inches to 14 inches in height. A running pattern is painted up the centre of each light, and the lights of the tracery are slightly relieved by the introduction of a little coloured glass in simple geometrical patterns.

The architect's assistant, Mr. T. Butler, has been acting as clerk of the works. The builder is Mr. Myers, of Lambeth; and the architect, Mr. William White.

The buttresses against the west front of the tower are not yet built, but their erection has been determined on: nor is the spire yet finished.

CHURCH OF ALL SAINTS, KENSINGTON-PARK.—Mr. W. White, Architect.

PROVINCIAL SCHOOLS OF ART.

Several of the annual meetings of provincial hools of art have been held within the last week or o, and, on the whole, a good deal of interest con-nues to be manifested in favour of such schools.

At *Sheffield*, the annual meeting was held in the usic-hall, on Wednesday week; the Right Hon. John rker in the chair, supported by Lord Denman, and ner gentlemen. The report refered to the arduous ty which the council had had to discharge of select-g from 116 designs the plan for a new school, pressing gratification that their choice appeared to ve been approved, and hoping that within a year it uld be in active operation. Mr. Ald. Mycock had ntracted for the erection, at a cost of 4,400*l.* cluding some alterations in the original plan for ating and ventilation. This, with 949*l.* paid for e land, 1,000*l.* for furnishing, architect's com-ission, &c. would make a total of 6,349*l.* The bscriptions were 3,500*l.* leaving 2,849*l.* to be pro-ded for. Desirous that the building should be free om debt, it was proposed that a bazaar should be eld, to which the noble families of the neighbour-ood had become patrons, and the council had such ssurances of support, that they anticipated the bazaar ould be one of the most successful ever held in the own. As soon as it could safely be accomplished, he council proposed to open an exhibition of paint-gs, ancient and modern, and they had reason to ope they should be able to place before the public ch an exhibition of works of art as had never been en out of the metropolis. The school continued to old its honourable position. The students of the ast year were—males, 242; females, 52. These umbers, considering the defective arrangements of he present schools, indicated a strong desire for art-ducation. It appeared from the accounts that the Government grant was 520*l.*; students' fees, 220*l.*; ubscriptions, 204*l.* The principal expenses were—ent, 80*l.*; salaries of master and assistant-secretary, 352*l.*; attendants, 58*l.*; expenses, 128*l.*

Mr. Parker, in his able address, remarked that to btain a proper understanding of art, the new and wise theory was, that we must endeavour to attract nto affiliated connection every school disposed to join in the organization, in order that we might have an educated taste. We aimed to produce works of art, and when they were produced, we desired to have a population able to tell us whether they be really works of art. This had been done in several districts with success. Its advantages were obvious, and he trusted they would be participated in more largely than hitherto in this neighbourhood. The plan was to allow all schools within a reasonable distance to affiliate themselves to the central school, and thus to promote in them correct drawing, and such other parts of artistic education as the time their pupils could give to the subject might permit. The more this object was pursued, the sooner we should have a community educated in art. In point of fact, the carpenter and the mason, besides learning to do the mere work of their trades, would learn to make sections, to draw lines correctly, and to understand better the plans by which they were to work. It was to the want of artistic education that we were to ascribe much of what was said as to the superior understanding of art on the continent, and to our uninformed and inadequate appreciation of works of taste in England. We were now come to an age in which people and nations were brought nearer together than before. Railways, steamboats, the electric telegraph, the tendency of expositions, all had increased the communication between neighbouring nations, and had brought them so near that, to say nothing of higher considerations, other things being equal, the country that did not cultivate its taste—that in producing articles durable and useful did not also make them such as it was pleasing to look at by the side of those of other countries—was very likely to be distanced in the race. Not only our ambition, but our national interests forbade us to neglect these subjects. He was struck the other day, in reading the *Builder*, to find, in an article on the education of the lower classes, some remarks on the miners' school at Alston, which Mr. Parker quoted, with a kind and complimentary allusion to our journal. The speaker then strongly recommended both student and master to

> "Let Grecian models be their chief delight,
> Read them by day and study them by night."

At the meeting of the *Coventry* school, Sir Joseph Paxton was in the chair, and delivered an energetic address, in which he expatiated on the necessity of an active art-competition with France, where, during the last three centuries, whatever had been her troubles or her difficulties, and they had been many, she never for one moment had relaxed in her efforts to foster and push forward by every possible means the arts and designs in connexion with manufactures: indeed, he remarked, the objects of interest in the country were such, that no person could go from London to Paris without being made aware of the fact, as it was at once before his eyes: all kinds of excellent designs were in every place of amusement, in the cafés and restaurants; for the decorations in a restaurant cost as much as any room of her Majesty in Buckingham Palace. These decorations, he was going to say, were as common as bilberries: they were to be seen at every corner of the street, and for one penny expended in orange water, anybody could go in and see the decorations of the rooms. This was carried on, not only at Paris, but in every town in that country, so that the people had constantly before their eyes excellent and beautiful designs. This certainly did not accord with our notions in this country; for if they were to take their wives or families to London to-morrow, and wanted to get some refreshment, they would not know where to go. There was this difference of character between the two great places, and he must say London suffered very much in the comparison. He dared say that they would think it very curious, and a great talk would be made of it, if his friend on his right, the mayor, were found sipping his coffee at a restaurant's in their Market-place; but this was common in every town in France, where they all assembled to hear and read the news: they also took their wives and daughters, there being no difference in this respect between the sexes, so that the people were enabled to get some idea of the decorative arts. It was this which employed such a vast number of persons in performing these decorations, which were enjoyed by everybody in France, from the highest to the lowest.

As to the interest in art displayed in Coventry, although the school had suffered from the change in Government tactics, as well as from other causes, amongst which, perhaps, Sir Joseph might have urged a little more strongly the necessity for the ribbon and watch manufacturers dipping their hands a little more deeply into their own pockets, he adduced the fact, that in the course of four days' exhibition of the art works sent down from Gore House, 11,000 persons had visited and seen these works at Coventry, which, more than anything else, he said, satisfied his mind as to the progress of a desire to foster the school of art in this town. In conclusion, Sir Joseph remarked that one thing had struck him with much surprise in walking round the room—he should tell them the truth—when he got to the end, he could not help asking, "Where are the ribbons?" "Where is the staple commodity?" There was everything merely done—but no patterns of ribbons. He thought he should offer a prize—a good one, next year, to be competed for by the ladies, but it would be for ribbons.

The *Burslem* meeting was held on Friday in last week, and the attendance was an overflowing one. Mr. C. B. Adderley, M.P. was in the chair, and Mr. Minton was amongst those on the platform. Mr. Adderley also expatiated on the art-precedence of France, but in giving the statistics of art-works at the Paris Exhibition, he forgot one amongst various, certainly right reasons, why France was ahead of us in the number of art-works exhibited, namely, that France contains a good many more *people* than England does. Still the conclusions which he drew from the whole were in the main correct. It appeared, he remarked, that of the works of art, 2,700 were contributed by France, 800 by England, 650 by the German States altogether, and three by Turkey. Now, he asserted that any just comparisons instituted as to the relative importance of these nations would be borne out in the main by a comparison of these statistics. The two leading contributors they saw to be France and England, the nations which might be said without vanity to stand foremost in the world. The German States, which, he thought, by their own admission, in this great European struggle that must be looked on as a test of the relative power of nations, had occupied a secondary place on the theatre of the world, were also found in a secondary position in the Paris Exhibition. As to Turkey, he might observe that her three works of art were no unit representation of the triple alliance, which alone saved her from annihilation at this moment.

The Burslem School is almost in its infancy as yet, this being but the second year of its existence, but it is considered to be making favourable progress. The average number of students on the books is fifty-six, according to the report, which states that the success of the school is exceeding the most sanguine expectations.

In reference to the subject now under notice, we may observe in conclusion, that the School of Art at *Dunfermline* appears to be taking root. The master, Mr. L. Baker, delivered a kind of general and introductory lecture on the subject of science and art last week, which was largely and respectably attended. The Lord Provost and other public men of the locality were present, and all appeared to take much interest in the subject.

THE SUPPLY OF QUANTITIES BY ARCHITECTS.

Touching the query raised, p. 467,—in "Scott's Reports," vol. vi. p. 1, is to be found the record of the opinion of the judges (*in banco*), on the point in question.

The case arose thus:—The guardians of the Whitney Union employed Mr. Kempthorne to prepare plans for a new workhouse, and afterwards directed him to get in tenders.

He appointed (without any authority from the guardians) Mr. Moon, a surveyor, to take off the quantities, but before the tenders were delivered to the guardians, they and Kempthorne disagreed, and the works, as then intended, were abandoned. Subsequently Kempthorne received payment for his services, and Moon, having been refused payment by the guardians, tried the case, on circuit. The defence set up by the guardians was, "No privity," or "contract." The jury found for the plaintiff (Moon), but the defendants, having moved for a new trial, the case was argued in the Common Pleas, Westminster, before Chief-Justice Tyndall, and Justices Parke, Collier, and Bosanquet; the late Serjeant Talfourd appearing for the guardians, and Serjeant Wilde (now Lord Truro) for the surveyor (Moon). The four judges held that "An architect has the right and power to pledge his employer's credit to a surveyor for the quantities, and that in so doing he is acting as their agent."

About the year 1850, another case was tried in the Court of Exchequer, before Baron Martin (Wright *v.* Attenborough); and this year I recovered payment from the Board of Guardians of Brighton for quantities supplied for the Industrial Schools that they contemplated building, but which they afterwards abandoned. I was appointed by their architect, Mr. Collins. In my case a greater difficulty arose, namely, the guardians of Brighton have a local Act, and are, therefore, differently constituted to the generality of boards of guardians. The clause they brought forward was one that requires "All contracts to be reduced to writing, and signed by the parties." Fortunately for me, by that local Act, the guardians had no power to build schools, and, therefore, the judges held, that the local Act could not apply in my case.

In the case of an architect being his own surveyor for the quantities, no doubt a legal difficulty would arise, independently of which it is in principle bad, and places the architect in a wrong position with reference to the contractor.

I have gone into greater length than I at first intended, but as the profession generally do not know that the point is a settled one, perhaps you will give this statement a place in your columns.

Robt. W. Armstrong.

Surely your correspondent "Sub" will not venture to contend that he, or any architect, is permitted to entail any additional expense upon his clients, without first obtaining their sanction.

If it is necessary that the quantities should be got out, the client should in all cases be told openly that the expense will ultimately fall on him. This is the honest way of doing business, and the only one an honest architect should follow.

It is a surveyor's and not an architect's duty to take out quantities, and, although many architects perform such duty, on account of its being a lucrative contingent to their profession, still, they place themselves in the position of the surveyor, and can only expect to be remunerated for their trouble when a *direct order* for such work has been given them.

W. G.

THE WORKS AT WORCESTER CATHEDRAL.

WORCESTER ARCHITECTURAL SOCIETY.

At the annual meeting of this society held a few days ago, a communication was read from Mr. Truefitt, in the course of which he said:—The numerous copies of old buildings which had sprung up of late years were almost a disgrace to the present generation, inasmuch as they were servile imitations, exhibiting nothing original. He did not mean to say that the architectural profession had not many members who knew how to use their own ideas, but such men at present were in the minority, probably because they were so little wanted; most people therefore continued to be guided by the greater number and by unprofessional societies. These societies, he admitted, did good up to a certain point, by bringing people together and making them think and ask questions about what they had never cared for before; but when their members had to do with church *building*, they almost always went wrong—their ideas being antiquarian, not architectural. Now, it was quite right, in *restoring* a building, to take the antiquarian view of the case,—never to pull down any work and rebuild it in another style, but always to prop up and patch an old building in all its varieties

of form,—never to pull down elegant spirets at the angles of our cathedrals because they were not of the date of the original building, but to restore them,—never to remove such quaint original buttresses as those flying ones at the east end of a certain structure not a hundred miles from the Faithful City, merely because they were not there when the building was first erected; for if such mutilations were fully carried out, nearly all our churches would be eventually pulled down with the exception of the original portions; namely, the Norman doorways and broken fonts. Our buildings should be restored just as we found them: if there were a Norman nave and a Decorated chancel, restore each, but do not try to make them alike: a building should be mended just as we patch an antique chair or rivet an old china bowl. If such societies as this confined themselves to restoration in this spirit, it would be well; but in new buildings it generally happened that these societies would make them imitations of some existing and favourite church; and thus it was we had so many Skelton churches about the country, so many Newark and Stamford spires, Sompting towers, Suffolk roofs, Malvern pavements, Norbury glass—in fact, one might go into a new church now, and find an authority for everything, from the tower down to the vestry poker. People would not look at a design that was new and to be fitted up for a building of the present age; and thus an architect was bound to reproduce works of a former generation to meet the views of a society or committee of *taste*. The sensible and correct way, however, was to use all that had been done in past times as our A.B.C. to make ourselves thoroughly acquainted with that alphabet, and then to design simply with the materials of the present day—bricks, glass, iron, everything that could be got, so that we built for the wants of the time we live in, endeavouring to advance and not to retrograde in church architecture as well as our domestic buildings. What would people say if, at the next exhibition of the Royal Academy, Sir Edwin Landseer, Dyce, Mulready, Eastlake, or Stanfield, were to send nothing but copies of old pictures, instead of producing new and beautiful compositions? Would such a thing be tolerated, however truthful the copies? No. Neither should architects be allowed—or rather obliged—to copy from their old masters.

THE IRON TRADE.

The following statement of the principal orders for castings in the Glasgow iron market, during September, 1855, has been forwarded to us by Mr. T. Edington:—

4,000 tons railway chairs for Cheshire; 700 tons railway chairs for Nova Scotia; 4,000 tons railway chairs for London; 1,200 tons railway chairs for Liverpool; 1,000 tons water-pipes for Bombay; 500 tons water-pipes for Sunderland; 50 tons water-pipes for Hastings; water-tanks for Honduras and Isle of Wight; 3,000 tons water-pipes for Liverpool; 500 tons tank-plates for London; 300 gas-pipes for Rome; gas-pipes for Tower of London, Carnarvon, &c.; 40 tons iron beams for Cork; steam-engine, &c. for Exeter. Also contracts for British, French, and Turkish munitions of war. The Copenhagen gas and water contract has been lately taken by a London firm, and they have applied to the Glasgow iron founders to supply them with a large quantity of castings.

The ironfoundry trade of Glasgow, says our informant, has been, on the whole, very good, and the demand for castings considerable during the last five years. In that period a number of new works have been erected, and old ones extended. There are now upwards of 100 iron foundries in the west of Scotland, which can produce, when in full occupation, a very large quantity of castings, more particularly for railway, gas, and water works, public buildings, and bridges. The demand for the next five years has every prospect of being greater than during the last five years. A few of the principal new contracts in view at this time are as follow:—Very large quantities of castings for Loch Katrine Water; gas and water supply for Copenhagen; gas supply for Buenos Ayres; railways in Egypt, India, Australia, and Nova Scotia. Besides all these, there will be castings required for railway, gas, and water companies, over the greater part of the globe by-and-by, the principal part of which will be produced in Scotland.

The first cargo of the Ballycastle, Blackband Ironstone, county Antrim, Ireland, which is said to be very rich, will be delivered at Glasgow this month: it is quite equal in quality (adds our authority) to the very best Monkland stone, and is twenty-six miles square, and nearly 3 feet thick.

"We very much fear" (says the *Birmingham Journal*), "that the mischief resulting from continued changes in the price of metals has not been fully experienced. Last week we reported the resolution of the preliminary meeting of the ironmasters at Handsworth, declaring an advance upon the price of iron of 1*l.* per ton. It was hoped, and, indeed, believed, that that resolve would have been adhered to; but we are since informed that the attempt is to be renewed to put on still another pound. . . . It is more than doubtful whether so considerable an advance as is contemplated can be maintained. The ironmasters will have themselves to blame for whatever mischief results from this unwise attempt to push up prices in existing circumstances: if persisted in it will operate most prejudicially on the trade generally, both of the town and the district."

THE BARRACKS COMPETITION.

We are told that more than 130 designs have been sent in in reply to the offered premiums, including some by men of high standing in the profession. We have received four letters to the effect of the following, but cannot vouch for the accuracy of the statement:—

Sir,—I have just heard that ———, who is on the Barrack Accommodation Committee, is a competitor, though the particulars have been asked for, and the design submitted under the name of the chief of his staff.

I invite you, sir, and all competitors, to protest with me against this last phase of architectural competition.

M. R. I. B. A.

IMPROVED DWELLINGS FOR THE POOR IN LAMBETH.

The Directors of the Lambeth Association for providing improved Dwellings for the Labouring Classes have determined to avail themselves of the facilities afforded by "The Labourers' Dwellings Act," and to proceed at once to obtain the certificate of incorporation. Ten thousand pounds of the proposed capital are already subscribed for. H. R. H. Prince Albert has consented to become the patron, and has added his name to the list of shareholders. The Council of the Duchy of Cornwall has also subscribed for 100 shares of 10*l.* each on behalf of the Prince of Wales. The Archbishop of Canterbury, Miss Coutts, Sir M. Peto, Mr. Wilkinson, M.P. and other influential and benevolent persons are among the shareholders. It is most probable that this will be the first association formed under the new Act, as no application has yet been made to the officer appointed by it for the certificate of incorporation. We much fear that the great advantages which the Act confers are not generally known.

TEMPLE OF SERAPIS, POZZUOLI.

A writer in the *Athenæum* speaks of an event here which must awaken the regret, if not the indignation, of the whole artistic and scientific world. He says,—The circumstances I allude to are connected with a new arrangement of the columns in the Temple of Serapis at Pozzuoli, and it is impossible to think of it without lamenting deeply that the superb ruins of this kingdom, so rich in antiquities, should be at the mercy of men who display the utmost ignorance of the first principles of art and science. I express myself strongly as the occasion seems to me to require, for this sacred spot, with its three grand columns, has now lost its character, and been transformed into a piece of mere patchwork. But to the point. The Temple of Serapis, built at a very remote period, has for many years been used as a place of deposit for marbles, fragments of sculpture, and columns, of which the precious columns of alabaster now in Caserta formed a part. In fact, everything of an antiquarian interest that has been discovered in this neighbourhood was placed within the precincts of this Temple, and lay here like the dry bones of an age past away until modern taste or caprice should restore them to a new architectural existence. The stranger who has visited Pozzuoli must well remember the interesting fragments which lay scattered round the lateral porticoes of this ruin. So placed, they harmonized well with the spot; they seemed like the representatives of former magnificence, and their fragmentary forms breathed forth homilies on the littleness of human greatness. Well, our Neapolitan *savans* have "*changé tout cela*," and in the true spirit of a London bricklayer who sets about building a snug smoking box for your small citizen, have set up the columns on end, and have transformed the Temple of Serapis into a Temple of Folly. Walk round it, and you will no longer recognise it—the spirit of the place has fled—it is no longer the solemn site of a venerable temple—it is a doll-shop—a toy which boys have put together on a fine summer morning "*pour passer le temps*." It is but justice, however, to state the motive which led to this ridiculous violation of the rules of taste and of art, though the very exposition of the motive will render the folly of the proceeding only the more apparent. The entire area of the Temple is, as must be well known, under water, the drainage of which was deemed impossible without removing the fragments lying around. So in a happy moment, as happy a thought struck our *savans*, that it would be as well to stick them up on end and clear the space by improvizing a new Temple. No sooner said than done. Now it should be known that the sea is much higher than the level of the Temple, and that from the high grounds around during the rainy season an ocean of water descends, which it is impossible to carry off. It may be taken out, but cannot be carried off, and with such an operation twice the number of prostrate marbles would not have interfered. There is nothing, therefore, to justify the act.

The columns, both prostrate and erect, were a species of self-registering hydrometer. At intervals, one marks the holes in them where, with the rise of the sea, "*mitili*" and "*folaoli*" penetrated the marbles and made their temporary homes,—and, about forty palms high, are visible the last labours of these little animals to convey to a future age information of the turning point in the last ebb of the Mediterranean. The confusion, therefore, which has now been introduced destroys the certainty of this great natural hydrometer, and tears, as it were, from history a page which can never be replaced. By whose counsel this most wanton act has been performed I will not inquire; but in the interests of correct taste, art, and science, it ought to be denounced, so that men who call themselves *savans* may be deterred from committing future errors, if they cannot redeem the past.

CAST AND WROUGHT IRON.

A reference having been made in your last number but one to Mr. Fairbairn's work on cast and wrought iron, may I make a remark or two on my perusal of that work? On referring to p. 77, it is stated that a wrought-iron beam of the same depth, bearing, and strength of a cast-iron one, would only weigh a little more than one third that of the cast-iron beam. Now the constant numbers used by Mr. Fairbairn are 26 for cast iron, and 75 to 80 for wrought iron, or as 1 to 3;

Mr. Fairbairn's formula, $W = \frac{a\,d\,c}{l}$, and Mr. Fairbairn's form of sections in cast iron, is bottom flange to top flange as 6 to 1, and in wrought iron, is bottom flange to top flange as 1 to 2: it therefore follows that a cast-iron beam with area of bottom flange 12 inches, and top flange 2 inches, equals 14; while a wrought-iron beam of equal strength will have bottom flange 4 inches, and top flange 8 inches, = 12; and the weight of a cast-iron beam is to the weight of a wrought-iron beam of equal strength as 14 to 12, instead of 3 to 1, supposing cast and wrought iron of the same weight. But the difference would be still less if we follow Tredgold, who makes the weight of cast iron to that of wrought as 3·2 is to 3·3. I have not taken into account the vertical portion of the beam between the ribs, as it does not enter into the formula of Mr. Fairbairn, and which appears to me to be the only portion as 3 to 1, by making the wrought-iron beam $\frac{7}{8}$ in. thick, while the cast-iron beam is 1 inch (see p. 77). There is one other matter in Mr. Fairbairn's work which I will notice: it has reference to his report on the causes of the fall of the cotton-mill at Oldham (p. 170). In note to p. 173, it is stated that the beams supporting the arches, of 10 feet 6 inches and 11 feet span, had to support loads of 10 to 11 tons respectively. Now if we take the superficial extent of flooring for weight, the longitudinal beam resting on the gable end wall and on the centre of the transverse beam will be loaded with about 8½ tons, diffused along its length, and being supported at both ends, would necessarily throw but one-half of its load, or 4¼ tons on the centre of the transverse beam which gave way, instead of the 8½ tons mentioned by Mr. Fairbairn (see top line of p. 174). I shall be glad to be put right if in error. Z. Z.

PATENTS.

Amongst the specifications of patents recently filed is the following, as given in the *Mechanics' Magazine*:—

"Roberts, Charles Henry, of Cornwall-road, Lambeth, Surrey. An improvement in the manufacture of rubbers for painters and others. Patent dated February 26th, 1855. (No. 421.) This invention consists in the use of ground pumice-stone in the manufacture of artificial rubbers, in place of employing pumice stone in the natural state."

The following appears under the head of "Provisional Protection:"—

"Johnson, John Henry, of Lincoln's-inn-fields, Middlesex, gentleman. Improvements in machinery or apparatus for rolling and slapping metals. (A communication.) Application dated March 1st, 1855. (No. 457.) This invention consists in combining an ordinary plain roll, or a roll slightly modified in form according to circumstances, with a block or plate running on a centre, and having a groove or slot

ded in its surface corresponding in curvation and
e to the article required."

he following come under the head of "Provisional
ifications not proceeded with:"—

Cooper, Joseph, of Lioucl-street, Birmingham,
wick, brace and bit manufacturer. Certain im-
rements in joiners' braces, and in the mode of
ing or partially forming the various bits to be
t with such or any other kind of brace. Appli-
on dated February 27th, 1855. (No. 428.)

s invention comprises an alteration in the form of
spindle or mount which unites the head to the
k, and on which the head works. This spindle is
parabolic form, curving outwards at the base,
the purpose of giving a proper bearing to the
k, and equalizing the friction from the pressure
action on the head, while in use. Also the use
a screw-pin to be placed in the front or side of the
k, just below the base of the spindle or mount,
the purpose of better securing the some to the
k, &c."

"Taunton, William George Henry, of Liver-
l, Lancaster, civil engineer and patent wind-
-purchase manufacturer. Improvements in pumps,
np-gear, and pump-buckets. Patent dated March
, 1855. (No. 466.) This invention consists
enlarging the barrel of the pump above the lower
ve, so as to form a spherical, egg-shaped, or
er conveniently-formed chamber, between the
ver valve and the lowest point which the spear
ve reaches in its downward stroke."

Miscellanea.

Photographs from the Crimea.—The import-
ce of photography has never been more strikingly
own than it is by Mr. Roger Fenton's singularly
eresting series of photographic pictures taken in
e Crimea, and now on view at the Old Water
olour Gallery, Pall-mall. They divide themselves
o three sections, scenery, views of the camp; inci-
nts of camp life, groups of figures; and historical
rtraits, and under these headings are about to be
blished by Messrs. Agnew and Sons. Mr. Fenton
entitled to the thanks of all for what he has done:
is no common achievement. Some of his landscapes
the Paris Exhibition distance those of all com-
titors.

The Smoke Question at Leeds.—After a long
scussion, it has been resolved at a meeting of the
habitants of Leeds, "that a subscription of 120*l.* a
ar be raised for three years, for the purpose of
ating the nuisance arising from smoke, and that a
mmittee of five be appointed to carry this resolu-
on into effect; and that a further subscription of
20*l.* a year for three years be raised, for the purpose
giving premiums to such enginemen as shall, under
fficult circumstances, consume their smoke in the
ost effectual manner." It is surely time that some-
ing complete was done.

Shortening of Stofforth Church.—Your cor-
espondent, "M. R. F." accuses the Yorkshire Archi-
ectural Society of apathy in the case of the late
teration of Spofforth Church, and it is probable that
he letter of "An Old Member of the Society," which
ppeared in your last, may be looked upon by some as
t least a corroboration of your correspondent's charge.
beg, therefore, in defence of the society, to state
hat it was entirely in consequence of its representations
o the ecclesiastical authorities that the matter was
rought before the diocesan court, and that a memo-
ial, protesting in the strongest manner against the
hreatened mutilation and transformation of the
hurch was drawn up, and *unanimously* adopted by
he committee, and submitted by them to the court.—
William Hey Dykes, Secretary of the Yorkshire
Architectural Society.

Sanitary Paints. — My attention having been
alled to a communication in your valuable journal of
29th September, describing the Lacboracic Paint,
wherein the writer alludes to my patented sanitary
paints, apparently classing my invention with his,
which I consider may have a tendency to engender
erroneous ideas as to the nature and character of my
invention, which is no mere theory, having been
practically tested, and declared to be of great public
benefit,—I may state that it is the result of upwards
of eleven years' study and practice by myself, as a
colour manufacturer and house-painter of nearly forty
years' standing, and having acquaintance with the
affinities of all available chemicals and ingredients
necessary. Therefore, I court the investigation of
any chemical or practical men in any branch of trade,
and am also ready to prove all I have asserted in
writing, or in print, as also by ocular demonstration,
submitting the same to the severest tests. The cause
of my invention not having yet been carried out
arises from the difficulty to obtain a *bonâ fide*
capitalist, or to form a company for that purpose.—
Arnold Morton.

East-end of St. Paul's.—Would you allow me
to suggest a plan for the disposal of the ground at
the west-end of Cannon-street, Cheapside? Would
it not be possible to set back the projecting corner of
the house on the south side of St. Paul's School,
flush with the school, and when the houses at the
other end, the Cathedral Coffee-house, &c. shall also
have been taken down (as I believe it is not the
intention of the City authorities to renew the leases), a
fine wide roadway, with the massive front of the school
standing out, would be obtained. Also, pull down the
houses, forming part of Old Change, the baker's shop,
and Phillips's warehouses, and bring new houses, in
character with the rest of the street, forward, as far
as a line drawn from the front of St. Paul's School:
thus covering the present roadway, and enabling, at
least, two large houses or warehouses additional, to
be added to the length of the street. And, further,
if at any time the bridge at Paul's Wharf should be
thrown across the Thames, what better road could be
had than one direct from the Post-office and Alders-
gate-street?—Amateur.

Brighton and Sussex Society of Arts.—The
object of this society is the promotion of the fine arts
in the town and country, by means of annual exhi-
bitions of paintings, the application of its surplus
funds to the formation of a permanent gallery, &c.
Their first exhibition (already referred to) was opened
on the 17th ult. and besides a number of local artists,
they have had the assistance of upwards of eighty
artists from London and elsewhere. It is intended to
open the gallery in the evening for the benefit of the
working classes, and also, if it meet with sufficient
encouragement, to have an exhibition of the works of
the old masters and others, to be borrowed for the
purpose from private collections.

Homes for the People. — Sir: Your August
monthly part contains on page 370, a notice of a re-
cently published work of mine, "Homes for the
People," to which I beg leave to reply. The re-
semblance to the quoted sentences of the book in
question, to passages in your excellent little work,
"History in Ruins," is so justly shown, that I can-
not blame the feeling that has led you to speak so
warmly of the absence of all credit to the source from
which the spirit of my remarks had been derived.
You do me, however, an injustice in two instances—
the one, sir, speaking of the "Homes for the
People," as a compilation, which a perusal will show
you it is not; and, although of course you could not
know it, the absence of reference to your own well-
known little volume was entirely accidental, and
occurred in the following manner:—The "Homes
for the People" was ready for publication a year ago,
and by a disastrous fire in this city, the whole—then
ready for issue the *next day*—was one Sunday,
entirely destroyed—stereotype plates, MSS. and, in
fact, every vestige of the book, excepting two portions
of the work, of about ten, and in another portion,
about twenty consecutive pages. In the original
work, I specially called attention of my readers to
the excellent little manual "History in Ruins;" but
it so happened in re-preparing the present volume
for the press, the portions saved contained the
passages you have quoted, and I forgot to give the
credit where it is so justly due. Although this does not
alter the public impression of the work, you will, I
trust, believe my assurance of the purely accidental
omission of proper recognition of your claims. I
have consulted my publisher in reference to the
semblance of dishonest appropriation of the brain-
coinage of another should appear in a work which I
have endeavoured honestly and carefully to write;
and as the work is stereotyped, there being no course
but in a future edition to append a foot-note, which
will seem but a bungling after-thought, I hope you
will content yourself with this explanation, at the
same time remarking that, if you wish me so to do,
I will with very great pleasure, add any reference to
your work that can effect the object you desire. In
a work I am now writing, I will make the *amende*,
and were it not that I so entirely sympathise with
your proper author-jealousy, I would not thus take
the liberty to write you. I may add, as a Yankee
consolation, that perhaps it is better for *you* as it is,
for *had* I referred to your little volume, and had I
praised it, as I must have done, some enterprising
publisher would have pounced upon it, and would
have got out a cheap reprint here at once, to the
destruction of all hope of profit to you from its
legitimate sale. I have to write hastily to save this
present English mail, but I trust I have given you
sufficient explanation to satisfy you I intended no un-
gentlemanly picking and stealing from your own flower
border. I shall be glad if you will publish this note
in the *Builder*.

New York. Gervase Wheeler, Architect.

*** This frank acknowledgment on the part of Mr. Wheeler entirely disarms us. We shall hope to find the work successful.

Improvements in Ship-Building. — We lately noticed the providing of iron ships with hollow or tubular iron spars. It now appears that not only foreyards, but mainyards and even masts are likely to be made of tubular iron. A mainyard 112 feet long and 2 feet 4 inches diameter at the slings, has just been made of tubular iron at Liverpool. It weighs only 7 tons, or about one-third less than a timber *yard*. What we at present desire more particularly to notice, however, is the novel application of vulcanized India-rubber to the sheathing of ships, and the fabric of sails. Among the patents taken out by a Mr. Goodyear, in respect of the application of India-rubber, is that of sheathing, on the ground of its less cost, that it will not corrode, that it is as easily applied as copper, and that its durability is greater. When used in the construction of sails, it is found that they will not stiffen, nor will ice adhere. It is also proposed to be rendered available in the construction of ships' boats. The patents further include the application of this substance in packing, paying seams, in the formation of buoys, ships' letter-bags, provision-bags, water-tanks, tarpauling, &c.

Coal and Iron Trade of West of Scotland. —From returns obtained through Mr. Williams, inspector of mines for Scotland, it appears that while in 1854 there were 367 collieries in Scotland, 337 of these belonged to the West country. It also appears that, during the same year, there were 7,448,000 tons of coals raised in Scotland, and of these about 6,448,000 were drawn from pits in the four western counties alluded to. The produce in 1854 (at an average of 7*s.* 6*d.* a ton), is estimated at about 2,418,000*l.* sterling. Of the coals so produced, 2,152,800 tons were consumed in the manufacture of pig iron; 367,200 in the conversion of pig into malleable—making in all 2,520,000 tons used in connection with the manufacture of iron; while 926,221 tons were shipped, and 148,312 tons were sent beyond the boundaries, northward and southward, per railways, leaving for the manufacturing consumption, steamboats, and domestic use of the Glasgow district, 2,853,427 tons. During the same period the number of persons employed in the collieries producing this quantity of fuel, were in all, 22,980. So late as 1830 there were only sixteen blast furnaces in the west of Scotland, and the whole produce scarcely reached 40,000 tons. It appears, however, that during 1854, of 118 furnaces for the smeltiug of iron ore, then in full blast in Scotland, and producing 796,640 tons of pig-iron, 102 were situated in the two western counties of Lanark and Ayr, and the produce of these amounted to 717,600 tons. At 79*s.* 8*d.* per ton, the gross value of this industry was 2,858,440*l.* Of this, 122,684 tons were shipped direct to foreign countries, and 294,194 tons were sent coastwise; while 22,865 were sent by railways, and 171,360 were converted into malleable iron, leaving 106,497 tons for foundry and other purposes of the district. The number of men employed in the iron mining in this district during 1854 was 5,585. In malleable iron almost nothing was done in the west of Scotland till 1839, and in 1842 the production did not exceed 35,000 tons. During 1854, however, the manufacture reached 122,400 tons. At an average of 10*l.* per ton, the gross amount of this industry was 1,224,000*l.* The number of men employed was about 4,000.

Polytechnic Institution.—The Monday attendance of the industrial classes here fully justifies the experiment made by the directors. Last week the visitors were so numerous that entertainments were going on simultaneously in both theatres. It is worth noting that on these evenings there is no diminution in the receipts from the full price attendants; and if one may judge from the satisfaction evinced by many members of the aristocracy present on a recent Monday evening, no small part of their gratification was derived from the evident enjoyment displayed by their less exalted fellow countrymen.

Ovens.—I have seen ovens of sheet-iron constructed upon the principles suggested by your correspondent "E." They are admirably adapted to cooking purposes, being in this respect greatly superior to those upon the old plan. The saving of fuel consequent upon their use is considerable, and their construction is simple. They are heated from the kitchen grate, through an opening in the side plate, a little above the bottom of the grate. A space of say 3 inches betwixt the brickwork and the oven is left on four sides, viz. the bottom, the side most distant from the fire, the back, and the top: round these the flame from the beforementioned opening passes; and thence by means of a flue the smoke is conducted into the chimney. A damper in this flue enables you to let on or shut off the heat at pleasure, while a piece of thin iron, an inch or so in breadth, girthing the oven, placed with the edge upon its sides, and worked backward and forward by an iron rod from the front, serves to remove the soot that in process of time will accumulate.—J. F.

Brushes for the Lacboracic Paint.—Again must I trespass to a small extent upon your time and space, in connection with the "*Lacboracic Paint.*" Such of your correspondents as may honour it with a trial will find, if they employ the ordinary brushes (bound with twine, and fastened by *glue*), that the latter will speedily fall to pieces, the *Lacboracic* being a water-paint. This awkward occurrence may be prevented by the following simple process:—Pour a quart of boiling water upon 1 oz. of powdered *nut-galls*, and, when cool, pour off the clear supernatant liquid: soak the brushes in the same for forty-eight hours; at the expiration of which time the *glue* they are fastened with will be entirely converted into *leather*, and, consequently, they are then quite unalterable by either oil or water paints, and stronger than they were before. I did not use brushes of the above description in my first experiments, or the above would have been thought of, and sent to you sooner. —W. L. S.

Scarcity of Labour in Wales.—Owing to the railway, dock, and other extensions going on in South Wales, labourers are realizing 3s. 6d. while blacksmiths range from 5s. to 6s. a day.

Electro-telegraphic Progress.—An attempt to lay down the submarine telegraph across the Gulf of St. Lawrence, seventy miles in length, to St. John's, Newfoundland, which would have reduced the interval for news between Liverpool and New York to six or seven days, has unfortunately proved unsuccessful. After forty miles of the cable had been run out, during a period of heavy weather, which had already occasioned many interruptions, the line parted, and had to be abandoned. The season being now over, the enterprise cannot be renewed till next year. It appears that, instead of a large steamer being employed, the cable was shipped on board a sailing barque, which was towed by a small steamer, and that the disaster is to be attributed to the difficulty of their keeping together in a rough sea. It is to be hoped this misadventure will not have the effect of checking farther progress in the same direction. ——Messrs. W. J. Macquorn Rankine, C.E. and Mr. John Thomson (of the East-Indian Railway), have patented a method of laying electrical conductors, for submarine telegraphic communication. The resistance of fluids is employed under this patent, the fluids being forced by pumps through adjustable valves to regulate the speed of the drums and pulleys by which the cable is dropped. The inventors calculate on thus saving the labour of twenty or thirty men, enabling *one man* to regulate the speed of the cable by opening and closing a valve, and rendering the whole operation, in great depths of water, incomparably safer, more certain, and more expeditious, as well as cheaper, than it is at present.—— The preparations for laying down the submarine telegraph cable between Sardinia and Africa have been progressing satisfactorily. Intelligence was lately received, according to *Galignani's Messenger*, from Mr. Brett, dated Cagliari, 22nd ult. on board the ship *Resolt*, 2,000 tons, with the submarine cable, 162 miles in length, on board, ready to start. Mr. Brett has determined that the cable shall be laid from Cape Spartivento (Sardinia) to Bona direct. The length of cable is said to allow largely for the sweep and variation of the vessel's course and the profile of the bottom of that part of the Mediterranean, as shown by the soundings previously taken.

Serpentine Stone.—Some who are interested in the *exploitation* of serpentine write to us as follows:—"In the able and useful papers on the Chemistry of Building Materials, by Dr. Wilson, which have recently appeared in your journal, allusion is made to the 'very beautiful rock now coming into use as a building material, called Serpentine,' and the author states that it is 'a soft stone, not very suitable for out-door exposure, but admirable for inside pillars.' As the subject is becoming every day of increasing interest to the building world, we trust you will allow us space in your columns to point out that the statement in question is not correct in reference to the Lizard Serpentine. You are probably aware that the whole, or the greater part, of the Lizard Promontory is composed of serpentine—those picturesque cliffs which have become an object of great attraction to tourists, having been placed by nature on the most exposed portion of our coast, where they have resisted for ages the broad sweep of the Atlantic. It is not, however, generally known that the stone of the district has been used for building purposes conjointly with the granite, also found in the neighbourhood, and that it is proved to resist the destroying hand of time in a far higher degree than its kindred rock. The parish churches of Grade and Landewednack, in the Lizard district, are built of granite and serpentine, in alternate courses, and are of considerable antiquity. The granite exhibits manifest symptoms of decay, while the serpentine is as sound, and the edges of each stone as sharp, as on the first day of erection."

Sanitary Progress at Swindon.—A correspondent, who has occasionally sent us communications on this subject, points attention to the completion of a pair of labourers' cottages for the lord of the manor, in which there has been manifested a lamentable want of sanitary considerations. Into the detail of these, however, it would be useless as impossible for us to go. It is painful to hear of such facts, but we fear they are but too prevalent in more places than Swindon. The House of Commons, of which the proprietor of the cottages referred to is said to be a member, has now been pretty fully impressed with the necessity of carrying out stringent laws for the prevention of the possibility of every such alleged infringement of the laws of sanitary science and of common sense; and it is to be hoped that ere long every member of that House will become, without exception, even in his extra-official capacity, an individual promoter, exponent, and upholder, of such laws, and neither a breaker nor a neglecter of them, as but too many of them still appear to be.

Lismore Castle Towers.—The foundation-stone of a new tower at Lismore Castle, an Irish seat of the Duke of Devonshire, was laid by the Lord-lieutenant of Ireland, on Tuesday in week before last. The tower is to be called the "Carlisle Tower," in honour of the noble layer of the foundation-stone. It is one of a series of new or restored towers with which Lismore Castle is being adorned. The foundation of the Carlisle Tower is 15 feet beneath the surface. From the ground line to the battlements it will be over 140 feet, whilst a turret will rise 30 feet from the battlements, making its entire height 170 feet; and it will thus look down upon and dominate every other part of the castle. The first of the series of towers built within the last two years, to replace those of times gone by, was what is called "The Bloody Tower," from some old legend connected with it. This tower, which has been for centuries an ivy-covered ruin, now forms one of the most prominent features in the various approaches to the castle, more particularly that from the north. It is built in the Machicolated style, with battlements and embrasures, and is surmounted with a light turret, which springs from the tower itself, by means of a corbel. The interior contains various apartments. Another tower, which also lay for centuries in ruins, has been rebuilt. It forms the south-eastern angle of the square, and is known as "King John's Tower." Like the other, its interior has been made available for modern usages. Beyond this, on the south side, is the gate or entrance-tower, over the gateway of which is a stone tablet bearing the arms and motto of the great Earl of Cork. This has also undergone various repairs, and is brought more in unison with the rest of the castle. The eastern wing, which was of a modern style of architecture, has just been rebuilt in the castellated style, having two bay windows. The round tower, forming the entrance to this wing, has just been raised and castellated. These works have been carried out under the inspection of Mr. John Browne.

Gas.—The half-yearly meeting of the Surrey Gas Consumers' Company was held on Thursday in last week, when a dividend of eight per cent. per annum, free of income-tax, was declared, leaving a surplus in hand of 749*l.* 1s. 9d.——The result of the inquiry which has been going on in Liverpool as to the charges made by the gas company, and the accuracy of the metres, it is said, has not been creditable to the company, as many of the metres are found to register against the consumers. The superintendent of St. John's market stated, that whilst the dry metre registered 354,000 feet, the wet metre indicated 483,000.——One of the most alarming gas explosions which has taken place since the memorable one in Albany-street, Regent's-park, occurred on Thursday night in last week, at the Torriano Tavern, Torriano-terrace, Kentish-town. The landlord went round to see that all was safe, and on entering one apartment with a lighted candle, an explosion took place, which shook not merely the house, but the foundations of every house in the neighbourhood, for a considerable distance. The entire north front of the building was blown out. The door of the wholesale department, as well as the corner door and windows, were blown completely across the street, and several windows in the neighbourhood were shattered by the concussion. The walls which surrounded the parlour on either side were nearly blown down, and the unfortunate landlord, Mr. Dance, was carried across the bar and against a mahogany compartment with such violence as to split it to pieces. Mr. Dance was found lying in front of the bar, in an insensible state and dreadfully burned about the head, face, and body, but strange to say, no bones were broken. It is believed that the escape of gas originated from the upper part of the chandelier, which was upon the hydraulic principle. The house and stock are insured.

Surveyorship of Bridges.—At the Wakefield quarter sessions, Mr. Bernard Hartley, of Pontefract, was appointed to the office of surveyor of bridges, vacant by the death of his late father, Mr. Jesse Hartley. The salary is 400*l.* per annum.

Central School of Art.—We are informed that the two following names have been added to the staff of masters for the Central School of Science and Art, Marlborough House, viz.—Mr. H. Hagreen, late of the Charter House School, Goswell-road, to the class for "Architectural Drawing," in place of Professor Semper, who, in the early part of last session, accepted an engagement in Switzerland; and Mr. C. P. Slocombe, who some time since conducted the Finsbury District School, to the class for "Ornamental Design." It is to be hoped that this branch of the arts, which has so long had but a nominal existence in our head school, will acquire greater importance. Mr. O. Hudson has succeeded Mr. R. N. Wornum as lecturer on "Ornament."

The Synagogue, Great St. Helen's, Bishopsgate.—This edifice, built some years ago from the designs of Mr. John Davies, architect, has been recently decorated under his direction, at a cost of 3,000*l.* and now presents a very rich and elegant appearance. Some of the metal-work here is exceedingly well designed.

A Testimonial.—On Tuesday last a chased snuff box was presented by the workmen of the new Houses of Parliament to Mr. Samuel Chilvers, as a mark of esteem for his conduct during the years he was employed as foreman on those works.

TENDERS

For a house at Penge. Mr. Kelday, architect. Quantities by Mr. Wells:—

Taylor and Copeland	£1,435 0 0
Fisher (accepted)	1,348 0 0

For the new market-hall and shed at Warrington. Mr. James Stevens, architect. Quantities supplied by the architect:—

FOR THE IRON-WORK ALONE.

Fox, Henderson, and Co.	£2,490 0 0
Cochrane and Co.	2,436 0 0
J. Heywood	2,365 0 0
Melling and Son	2,171 12 6
J. and J. Cliff	1,999 10 0
A. Handyside	1,908 0 0
Picksley and Sims	1,875 0 0
T. Ferry and Sons	1,860 0 0
James Gibson and Co.	1,840 0 0
James Featherstone	1,749 0 0
Williamson and Roberts	1,725 0 0
Hemming and Co.	1,549 0 0
Wrightson	1,375 0 0

FOR THE WHOLE.

S. Denison	£3,750 0 0
Edward Bann	6,700 0 0
John Evans	6,600 0 0
Jos. Gibson and Co.	6,345 0 0
Walter Mabon	6,330 0 0
Clarke and Jones	6,264 0 0
Ligley and Shawcross	6,103 0 0
Brownhill and Co.	6,100 0 0
Mellor, Son, and Terras	6,069 0 0

Revised Estimates, the Council having decided not to expend more than 5,000*l.*

Clarke and Jones	£5,473 0 0
Mellor, Son, and Terras	5,173 0 0
Brownhill and Co.	5,140 0 0
Jos. Gibson and Co.	5,069 0 0
Ligley and Shawcross	5,060 0 0
Edward Bann (accepted)	5,000 0 0

For the erection of a new house, stable, coach-house, &c. for Mr. J. Gladding, at Havering-atte-Bower, near Romford, Essex. Mr. J. Saul, architect:—

Wilson	£1,640 0 0
E. Curtis	1,142 0 0
Hill	1,134 0 0
Marter	1,100 0 0
Hammond (accepted)	1,093 0 0

TO CORRESPONDENTS.

"Margate Pier" we shall by-and-by to see the paper in question, but do not think it desirable to enter into the dispute between the contractor and the directors *ex parte*).—"R. J. S."—"Mr. G."—"W. "*Books and Addresses.*"—We are forced to decline pointing out books or finding addresses.

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the Editor, and not to the Publisher.

ADVERTISEMENTS.

AGENTS WANTED, for the SALE of BATH, PORTLAND, and ROMAN CEMENTS, for the Export Trade, and for any of the large Towns of the United Kingdom. The highest references will be given and required.—Address A. B. C. care of Mr. W. H. Hayden, 17, Warwick-square, Paternoster-row, London.

ARCHITECTURAL PUPIL.—WANTED, in a West-end office, a gentlemanly, well-educated YOUTH; with a natural taste for drawing. Ability and gentlemanly address more an object than a premium.—Address, A. B. C. 16, Great Marlborough-street, Regent-street.

TO PARENTS AND GUARDIANS

AN Architect and Surveyor, of the West end, of thirty years' practice, and holding appointments, has a VACANCY for an OUT-DOOR PUPIL, who would have familiar advantages and other privileges. Premium, 150 guineas.—Address, B. A. care of Messrs. Websters, Stationers, 60, Piccadilly.

TO FOREMEN AND CLERKS OF WORKS.

A LEADING BUILDER, in a provincial town, requires a MANAGING FOREMAN, with a good knowledge of materials, and conversant with all the "branches." He must be able to set out and direct practically every description of work; be ready and accurate in taking out quantities, prepared "measuring up," and of perfectly sober and industrious habits. No one who is not possessed of these qualifications need apply.—Applications, with particulars, stating age, where previously engaged, salary required, &c. to be addressed W. W. Office of "The Builder."

ENGINEERING PUPIL.— A Railway Engineer has a VACANCY for a PUPIL.—For particulars, address, ENGINEER, Box 133, Post-office, Bristol.

TO ENGINEERS, IRONFOUNDERS, &c

MECHANICAL DRAUGHTSMAN.—WANTED, by a Young Man, a SITUATION; can make working drawings, take out quantities for iron-work, &c.; has had some experience in mining, three years in last situation. Reference given.—Address, ALPHA, care of J. Saunders, Druggist, New Radford, near Nottingham.

THE COMMISSIONERS of SEWERS of the CITY of LONDON, acting as the Burial Board for the said City, will meet in the Guildhall, on TUESDAY, the 23rd of OCTOBER inst. at TWELVE o'clock, to ELECT a SUPERINTENDENT and a PORTER or GATEKEEPER to the City of London Cemetery, at Little Ilford. The candidates must be not less than 30 or more than 45 years of age, and must be free of the City. They will be required to reside in their respective houses provided for them at the cemetery, and to give up all their time to the duties of their respective offices. The Superintendent must understand accounts, and be capable of writing a good hand; of good address; and duly acquainted with burying matters. He will be recommendation. Salary 150l. a year, and a house to live in, rent and taxes free. He must find approved security for 100l. The Gatekeeper will be required to act as Clerk in the services of the Chapel, and to attend to interments, and he must write a good hand. His wages will be 21s. a week; and a house to live in, rent and taxes free. Candidates must send in their testimonials, with certificates of age, to the Clerk of the Board, as undermentioned, immediately.

JOSEPH DAW, Clerk.

Sewers Office, Guildhall, October 9, 1855.

TO PARENTS and GUARDIANS.—A VACANCY is open for a Youth having acquired the rudiments of drawing, as a PUPIL in the office of an Artistic Decorator. A small premium required.—Address letters to A. Z. care of Mr. Weekin, Stationer, Parrin-buildings, Strand.

EMPLOYMENT

WANTED, by a Gentleman, an ENGAGEMENT as Counting House, or Wharf Clerk, for a permanency. Is past up books in arrear, as copyist (writing a quick, clear hand); or can supply that he serving can be made useful to those requiring assistance. Has a general knowledge of, and being well experienced in business. Salary moderate.—Address, U. X. Office of "The Builder."

TO BUILDERS' FOREMEN.

WANTED, a practical BUILDER'S FOREMAN, thoroughly acquainted with all the several branches of the business.—Address, stating age, particulars, and wages, and where last engaged, to Mr ROBERT SMITH, Builder, Dereham, Norfolk.

N.B. None need apply but those whose character will bear the strictest investigation.

TO BUILDERS' FOREMEN.

WANTED, a practical BUILDER'S FOREMAN, thoroughly acquainted with all the several branches of the business.—Address, stating age, particulars, and wages, and where last engaged, to Mr ROBERT SMITH, Builder, Dereham, Norfolk.

N.B. None need apply but those whose character will bear the strictest investigation.

TO STONE AND MARBLE MASONS.

WANTED, a WORKING FOREMAN, capable of taking orders, and superintending a few men; must understand the keeping accounts of materials used, and the work executed. Address, stating age, wages, particulars, where last employed, &c. in own handwriting, R. V. Mr. Holmes, Post-office, 133, Tottenham-court-road.

P.S. A married middle aged man would be preferred.

WANTED, in the Country, a Person who understands PAINTING and PAPERHANGING. Wages, 21s. None but experienced hands need apply.—Address to W. GIBBONS, Builder, Buntingford, Herts.

WANTED, by the Advertiser, a RE-ENGAGEMENT as OUT DOOR or GENERAL FOREMAN. Good references and testimonials from previous engagement as to competency and stability.—Address, H. W. Office of "The Builder."

TO STONE AND REDWARE POTTERS, BRICK AND TILE MAKERS, AND OTHERS.

WANTED, by a Practical Man, a SITUATION to SUPERINTEND or take the work to make, burn, and deliver from the kiln; understands the whole or the business, and who can give security, also if required, to purchase and close kiln; is a good accountant, and has no objection to go to any part.—Apply by letter to A. B 43, Mount-street, Westminster-road.

TO PLUMBERS, BUILDERS, &c.

WANTED, by a respectable Man a SITUATION as PLUMBER, GLAZIER, and PAINTER.—Address, J. G. Bloomsbury-chambers, George-street, St. Giles's, London.

TO MAHOGANY AND TIMBER MERCHANTS

WANTED, by a Young Man, who has been nine years in the business, a SITUATION as CLERK or SALESMAN, either in town or country. Would have no objection to travel.—Letters addressed T Z care of Mr. Hall, Stationer, 78, Old Broad-street, City.

TO BUILDERS, PLUMBERS, &c.

WANTED, a SITUATION as THREE-BRANCH HAND. A good reference can be given. Apply 34, Henry street, St. John's-wood.

TO BUILDERS AND OTHERS.

WANTED, by a Young Man, two years from the country, EMPLOYMENT as a PAINTER and GLAZIER, and to make himself useful. Used to a house Town or country.—Address (prepaid), to A. B. C., Witham-street, Manchester-square.

TO BUILDERS.

WANTED, by a Young Man who is about to leave his present Situation, a RE-ENGAGEMENT in a BUILDER'S OFFICE. He has a thorough knowledge of accounts, and the general routine of a Builder's Office. Unexceptionable references can be given.—Address, A. B. C. Post office, Little Sussex place, Hyde-park-gardens.

WANTED, by a thoroughly experienced Bricklayer, EMPLOYMENT in Town. An excellent reference can be given if required.—A letter, addressed to A. W. 41, Queen's road, Bayswater, will receive immediate attention.

TO PAPER HANGERS, DECORATORS, AND OTHERS.

WANTED, by a respectable Man, who thoroughly understands Paper-hanging and Distempering in all its Branches, and competent to fill up his time at Painting if required, a constant SITUATION in the above line. Wages not so much the object as permanent employment. Unexceptionable references for character and workmanship. No objection to the country. Address, A. B No 4, Rosomon street, Clerkenwell.

TO BUILDERS AND CONTRACTORS.

WANTED, a SITUATION, by a young Man, who thoroughly understands taking out quantities, measuring and estimating works, and who is a good accountant. Good references will be given.—Address, D. A. Post-office, Amwell-street.

WANTED to PLACE a YOUTH in an ARCHITECT and SURVEYOR'S OFFICE in London, of good standing and practice. He writes a good hand, and has a taste for drawing and the arts.—Address, Y.Z. Stevens's Newspaper Office, 49, Tottenham-court-road.

TO ARCHITECTS AND OTHERS.

WANTED, by a Gentleman, aged 26, an ENGAGEMENT with an architect or others, as DRAUGHTSMAN and GENERAL ASSISTANT. The advertiser has had about 3 years' experience, is familiar with office practice, speaks French and Italian, and knows the continent well. Salary not so much an object as an engagement in an office transacting large business. Abroad preferred.—Address, X. Y. Z. 9, Coleshill-street, Eaton-square, London.

TO ARCHITECTS AND BUILDERS

WANTED, a SITUATION, for EVENING EMPLOYMENT, by an experienced CLERK, who will furnish correctly and well written quantities, specifications, or accounts, on very reasonable terms, or, if required, keep the books.—Address, A. B. Office of "The Builder."

TO BUILDERS AND CONTRACTORS.

WANTED, a SITUATION, by a practical and experienced Man, as GENERAL or SHOP FOREMAN, who has a knowledge of house work in machinery in all its branches. No objection to town or country. Satisfactory references can be given.—Address, X. Y. Mr. Jones, 88, Goswell-road, opposite New River, Islington.

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

WANTED, an ENGAGEMENT, by the Advertiser (aged 18 years). Has been accustomed to prepare drawings, written out specifications, estimating measuring, and taking work, and the routine of the above offices. First-class references given. Apply by letter, U. S. Mr. Parker's, 12, Moor street, Soho.

TO BUILDERS, &c.

WANTED, by a Young Man, aged 22, EMPLOYMENT as PLUMBER, GLAZIER, and PAINTER.—Address, H. B. 14, Robert-street, Bedford-row, Holborn.

TO ARCHITECTS, BUILDERS, &c

WANTED, a SITUATION, for three or more days in the week, in an Architect or Builder's Office.—Address, for terms, &c. G. C 12, Old Dorset terrace, Clapham-road.

WANTED, by a respectable young Man of business habits, a SITUATION in a Builder's Office. Has a knowledge of builders' accounts and of bills of quantities. As improvement is the object, a very moderate salary only would be required. Unexceptionable references can be given.—Address, ALPHA, care of Mr. Hatch, 31, Hunting-terrace, Farnsbury-park.

TO HOUSE PAINTERS, BUILDERS, &c

WANTED, by a good GRAINER, accustomed to London work, a permanent SITUATION. Is willing to fill up time with painting.—Address, A. B. 9, Crawford-street, Baker-street.

TO CIVIL ENGINEERS

THE Advertiser, whose articles with an Engineering Surveyor, have just expired, is desirous of a SITUATION in the Office of a Civil Engineer. Salary no object in comparison of improvement. Satisfactory reference can be given. Town preferred.—Address, C. E. F. 2, Inverness-terrace, Bishop's road, Bayswater.

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

THE Advertiser, aged 30, a thorough competent and practical person, is desirous of an ENGAGEMENT, in town or country. Has a general knowledge of drawing plans, writing specifications, taking out quantities, measuring, estimating, &c &c.—Address, W. H. 21, Lee-terrace, Mildam, Portsmouth.

TO ARCHITECTS AND BUILDERS.

THE Advertiser is desirous of an ENGAGEMENT in town, in either of the above offices. Good references can be given.—Address, O. Y. Literary Institution, Camberwell grove.

THE Advertiser, aged 23, being about to leave his present employer, is desirous of a RE-ENGAGEMENT. He has been accustomed to get out working and detail drawings and prospectuses, can take out quantities, and has a good knowledge of land surveying. Excellent references and testimonials can be given. Salary moderate.—Address, A. B. Messrs. Halifax and Co. Stationers, 315, Oxford-street.

CLERKSHIP WANTED.—To Manufacturing Firms, Engineers, and Others.—A well-educated and intelligent Young Man, of high respectability and good connexions, is desirous of obtaining a RE-ENGAGEMENT as Clerk, Collector, or Traveller. Aged 31; married. Is an excellent accountant, writes a fine and rapid hand, and is perfectly competent to take the management of a manufacturer's or engineer's counting house, having been accustomed to the same for the last fourteen years. References of the first class. This will be found a desirable opportunity for any one requiring the services of a trustworthy and confidential man.—The advertiser preferring permanent employment in a good firm to embarking his own capital in business.—Address, Z A care of Mr. Boswell, No. 15, Mincing lane, City.

A YOUNG MAN, who has served his articles with an Architect and Surveyor, a quick accountant, and possessing a knowledge of the building business generally, is open to an ENGAGEMENT, on moderate terms, with a firm of respectability.—Address, A. C. 7, Nottingham-street, Marylebone.

TO BUILDERS AND OTHERS.

A YOUNG MAN, who is disengaged after four, p.m. OFFERS HIS SERVICES in tracing, copying, or preparing drawings, &c. Terms, is per hour.—Address, E. J. W. City News-room, Cheapside.

TO ARCHITECTS, &c.

AN experienced Practical Man is desirous of an ENGAGEMENT. He is a first-rate draughtsman, designer, and perspectivist, and is thoroughly conversant with office work in general. Designs made for builders upon moderate terms.—Address, J. P. office of "The Builder."

TO ARCHITECTS.

A CLERK of WORKS, of many years' experience, is DISENGAGED.—Address, X. L. 5, Waller-place, Frances-street, Newington.

A YOUNG MAN, aged 26, wishes to meet with a permanency, in town or country, as PLUMBER or THREE-BRANCH HAND.—Apply, J. H. Office of "The Builder."

A MECHANICAL DRAUGHTSMAN wants a SITUATION. One who has been used to make fair and working drawings of engines and machinery in general, and who has a knowledge of railway work. About 22 years of age, and has no objection to go abroad.—Address, P. T. G. 3, London-street, Paddington.

AN active Man, aged 30, is in WANT of a SITUATION as OUTDOOR FOREMAN to a Builder, having filled an engagement in the same capacity for the last four years, from whence he can be well recommended. Address, A. L. 4, Sussex Villas, Richmond-hill.

A THOROUGH PRACTICAL CLERK of WORKS is desirous of an ENGAGEMENT; well acquainted with Gothic detail, and can prepare working and detail drawings. Terms, two-and-a-half guineas per week.—Address, VESTA, 64, Theobald's-road, London.

TO ARCHITECTS AND SURVEYORS.

A GENTLEMAN, of first-rate abilities, both as a Draughtsman and Surveyor, being a thoroughly practical man, and having references to many gentlemen in the profession, desires a SITUATION, either as general assistant, or to take the management of an office. Age 28.—Address, ARCH, City News-room, Cheapside.

TO CARPENTERS AND BUILDERS

A YOUNG MAN, aged 21, is desirous of meeting with EMPLOYMENT where he could improve himself. Bench preferred.—Address, J. A. B Office of "The Builder."

TO ARCHITECTS AND BUILDERS

A CLERK of WORKS, a thorough Practical Man, having just completed some very extensive buildings, is open for an ENGAGEMENT. Is well acquainted with drawings and setting out works.—Address, post-paid, to C. D. Office of "The Builder."

TO ARCHITECTS AND OTHERS.

A GENTLEMAN, who is at present disengaged, would be happy to meet with an Architect requiring assistance. Has had considerable experience in the practice of the English and Italian styles of architecture, and is a first-rate draughtsman.—Address, H. E. 57, Devonshire street Islington.

CLERK OF WORKS.

A CLERK of WORKS, who has just completed an engagement in the country, would be happy to meet with a RE-ENGAGEMENT, to carry out works of any magnitude. The be best testimonials as to references given.—Address, Y Z Mr Born, Stationer, 19, Crawley street, Oakley square, Camden town.

ORNAMENTAL CHIMNEY-POTS.—More than 100 Patterns of the above-mentioned Articles are manufactured in Artificial Stone by J. SEELEY, at Austin and Seeley's Artificial Stone Works, 1 to 4, Keppel row, New-road.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is at 60 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Bentham, Lancaster.

No. 1 quality, inches diameter, and price per yard.									
¾	1	1¼	1½	1¾	2	2½	2¾	3	3 in.

Super-extra stout quality.

2	2¼	2½	2¾	3 inches.
2s.	2s 3d.	2s 6d	2s 9d.	3s. per yard.

No. 2. A cheaper hose, to bear a low pressure for gardens and agricultural purposes, at greatly reduced prices.

1	1¼	1½	2	2½ inches.
9d.	1s.	1s 3d.	1s.	1s 6d. per yard.

The hose is warranted at an extra charge of 3d. per yard. Union Joints, Branch Pipes, and Jets are also supplied.

O. MCARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

SCAGLIOLA done on an IMPROVED PRINCIPLE.—I refer to the Gothic Arch by D Dolon in the Great Exhibition of 1851, which gained the only Prize Medal awarded for the manufacture of the above work. Specimens to be seen at 12, Drury lane, two doors from Holborn, superior to any yet offered to the public, with a choice Collection of Ornaments for building purposes, Trusses for Shop-fronts, &c &c.

TO DEALERS in BUILDING MATERIALS.—TO BE SOLD, one or more of eight secondrate HOUSES (which form a terrace) completed, situate in a first-rate part of Paddington. Two thirds of the purchase-money can remain on them, and the rest will be taken out in building materials. For particulars apply by letter, to R. T. Mr. Phillips, Stationer, Shoe-street, Redford-square.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

This Paint possesses in an eminent degree the following advantages over all other known Pigments:—
INDESTRUCTIBILITY BY HEAT PRESERVATION OF IRON FROM OXIDATION WOOD FROM DECAY, AND MASONRY AND BRICKWORK FROM DAMPNESS—PERMANENCE OF COLOUR AND FREEDOM FROM DELETERIOUS PROPERTIES SUPERIORITY OF BODY.

The Protoxide Paint, as at present produced, is of one shade of colour viz.: a pale lead, but may be tinted with any other colour, to suit the taste and purpose for which it may be required. It is not affected by sulphuretted or carburetted hydrogen gas, bilge water, or indeed fouler of any kind, and is therefore well suited for the interior of Ships, Warehouses, Offices, Stabling, &c.; and from its total freedom from deleterious properties, it will be found of great value for painting the interior of Hospitals, Asylums, Unions, Gaols, and other Buildings which may require to be painted during occupation.—Sole authorized Agents for England:—

MESSRS. C. GRABHAM AND CO. 4, BARGE-YARD, BUCKLERSBURY, LONDON.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be entirely avoided. The Powdered White Zinc may be had for grinding in oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint dealers in Original Packages, each cask stamped—HUBBUCK LONDON—PATENT. And if not so marked the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Leadstreet, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster &c.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has entirely CLOSED his Estate in Hunt on the Surrey side of the Thames, and that all Articles of his manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Praed-street, Paddington.

6, South Wharf Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing the Trade the above superior CEMENT, being of uniform colour and quality, a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resisting the influence of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combines with whole lime cement by its hydraulic properties stamp it at once as the first Cement of the day for works where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and is contrary to the statements put forth by those who have hitherto held the monopoly. Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour, resembling the Bath stone CHARLES RICHARDSON, 8 South Wharf, Paddington.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement The shell lime for mortar is burnt on an improved principle, leaving scarcely any core The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co's Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the first quality.

SECONDS, PAVIORS, STOCKS, and other BRICKS.

CHARLES RICHARDSON 8, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-street, London, March 2, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders, deliveries, canals, or railway stations, should be given a few days before required.

TATHAM & CO.—**No. 14,** SOUTH WHARF, PADDINGTON,
BRICK, LIME, CEMENT MERCHANTS,
SOUTHAM BLUE LIAS LIME DEPOT

Bath Portland, Lias, and Roman Cements, Parian and Keene's Cements, Plaster of Paris, Glazed Stoneware Sewage Pipes, Fire Goods, Vitrified Blue Bricks, White Building Bricks, White Enamelled Pans and Traps, and every description of Building Material.

N.B. Lump and Ground BLUE LIAS LIME delivered in London direct from the Works in Warwickshire, to any part of the river or canal

SOUTHAM BLUE LIAS LIME DEPOT,
No. 14, SOUTH WHARF, PADDINGTON.

TATHAM & CO. have arranged for a constant supply of the above very superior BLUE LIAS LIME, which for the last two years has been extensively used at most of the large works constructed during that period or now in hand, and any orders they are favoured with will command their best attention

Boatloads of either Lump or Ground Lime can be delivered direct from the Works in WARWICKSHIRE to any part of the Rivers Thames or Lee, alongside any wharf on canal, or by boat or rail to any part of the kingdom.

PORTLAND CEMENT.—TATHAM & CO. are enabled to offer a very superior quality of this valuable Cement at a reduced price, and all orders addressed to No. 14, SOUTH WHARF, PADDINGTON, will receive the best and most prompt attention.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and Co. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable. Orders received at Great Scotland yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bridgwater and Taunton Canal, two miles north of Bridgewater, and adjoining the Parrett, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is so fine as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obnoxious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large consumers and exporters.

Dated 1st March-street, Bridgewater, July 26th, 1854.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well known and Stuccoes dry quickly, and can be painted upon within a few days Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS Millbank-street, Westminster, who prepare one quality only of Portland Cement.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no coloring. Sold especially by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days FRANCIS BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL, Light and dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, Ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Portzolano.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. MILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent. N.B. These Cements supplied for shipment on advantageous terms

NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishments, &c.—will not twist, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7 0 0
Fine	3 0 0
Coarse	2 10 0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis

11, George-yard, Lombard-street, City

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand and machine made, for shipment or otherwise.—Apply to G BOUTH, Agent, as above.

TO BUILDERS, CONTRACTORS, SHIPPERS, and Others.

G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland-yard, Westminster

DAVIES and NORMAN, Agents.

Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.
IN EVERY VARIETY.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.—T. H. BOORMAN, M.I.E., and CO. beg to inform the public and the trade generally, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable. Orders received at Great Scotland yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bridgwater and Taunton Canal, two miles north of Bridgewater, and adjoining the Parrett, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is so fine as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obnoxious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large consumers and exporters.

Dated 1st March-street, Bridgewater, July 26th, 1854.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best Grey Stone Lime in any quantities from the above wharfs, or per barge direct from the kilns, Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester. March 31, 1855.

JOHNS and CO.'S PATENT PERMANENT SILICO WASH prices NON ABSORBENT in quantity of PARIS WHITE and sheet upon it, and will not VEGETATE or RUB OFF Stucco Cement and Stucco Paint. CLARK and BENGOUGH, Manufacturers Office, 4, Gerrard-yard, Lombard-street. Works, Grand Surrey Canal Bridge, Old Kent-road.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES either old or new, whether of thatch, slate, or tile), and other structures. Sole agent J. B. LAWES, 89 King William street, City, London. Having been appointed, the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvelsoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d

THE KINSON CLAY-WORKS POTTERIES, and FIRE-BRICK ESTABLISHMENT, near Poole Dorset. Manufactures of every description of Sanitary Glazed Sewage-pipes, Closet pans, Furnace-blocks, Fire-bricks, Gas-retorts, Cornices, &c. &c.—The completion of the Kinson Pottery places the Proprietors in a position to supply Builders and the Trade generally, with any quantities of the above description of Articles of good fire prices. The pottery is situate about a mile and a half from the town and port of Poole. It is worked by steam power, and the pipes are made by the most approved patent machinery, and will bear favourable comparison with any manufactured in the kingdom. The fire-bricks have been tested, and are found fully equal to all respects to those manufactured at Stourbridge and Newcastle. All articles are made from the clays and materials found on the estate. There is an inexhaustible quantity of all descriptions of Dorsetshire Clay, used for pottery purposes, which can be supplied to the Staffordshire, North Country, and London markets, upon favourable terms

Lists of prices and all other information will be furnished, upon application to Mr. T. W. GREEN, at the Works.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 31, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "Reports of rat Juries," page 581, of the Great Exhibition, rank the Manufactories shown so long as "The Tileries." Tunstall, Staffordshire, as the first of the kind in the world.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—E. B. RAINES and CO. Brick, Tile, Lime, and Cement Merchants, Builders, contractors, and others supplied with every description of building material at the lowest market prices.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.:—Grey Stocks, 23s. per thousand, Gizzies, 25s.; Red Seconds, Rough Stocks, 28s.; Place, 16s.—Terms, cash on delivery. Apply to Mr G SMEED, Sittingbourne, Kent.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings of good and sound quality, constantly on sale at H. DODD'S Brick-fields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, before taking delivery.

Malm Place, half washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects, a very large proportion of the stock being suitable for external facing

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brick-fields, near the Rosemary Branch, Hoxton.

N.B Light-coloured Pit Sand of a good quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS, LIME, WHITING, TILES, FLINTS, GRAVEL, &c.—Messrs. MEESON and CO. supply stocks, pickings, rough stocks, place, red kiln bricks, paviers, &c. &c. on low terms—to any part of the Thames, the various canals, the River Lea, &c.—or rail to any station on the Eastern Counties line, or any railway connected with it. Also, flints for building and hard walk stables, cottages, &c. by going which or either of the above may be saved. Also lime, chalk, chalk rubble, gravel, loam for foundries, &c. &c. Whiting of the best quality for both white and stone bricks, fire goods, &c. can be obtained at Messrs. MEESON'S wharf Kobs at Bow-bridge, Stratford, Essex; or from the Works at Gray's, Essex. Orders, by letter, to Messrs. MEESON and CO. Gray's, Essex, executed with despatch.

Depôt, Agar Wharf, King's-road, St. Pancras.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c. Staffordshire Fire Goods, &c. of all descriptions, and of best quality—WOOLD and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent—Mr. J. UNWIN, Private Residence, 59, Nelson-square, Blackfriars-road.

NO BUILDERS, CONTRACTORS, and OTHERS—TO BE DISPOSED OF, at very low prices, a quantity of very hard BUILDING BRICKS, TILES, and PAVING WARE; also, 3, 4, 6, 9, and 18 inch red Socket Drain Pipes, in 2 feet lengths.—Apply to St. JOHN HEWITT, Redhill Works, Southampton.

TO CAPITALISTS, POTTERS, CHINA, BRICK, AND TILE MAKERS, AND LANDOWNERS NEAR RAILWAY STATIONS.

MESSRS. LANDS'S great economising PATENT KILN. Capitalists, and persons engaged in the above trades, owners of land near railway stations containing any description of pottery clays, brick or other valuable earth, are hereby invited to look at MESSRS. LANDS'S great economising PATENT KILN; from its construction it enables persons to burn and do one on any suitable spot where they may please, so to economise the heat, that all that great waste and extra expense looked upon as a matter of course in the old system, is completely avoided, causing the heat to dry and burn, and deliver any description of articles of the finest class, AT ANY SEASON in time of burning and finishing, with perfection and economy. Any one requiring to work the works all the year round, beyond the consumption of about seven tons of coal, to burn off 20,000 goods in each kiln. Any person desiring of availing himself of this opportunity for a short license or otherwise, may apply, if by letter, pre paid, to Mr. JOHNSON HANDS, Brick and Tile Works, Egham, Surrey, where the kiln is to be seen, by appointment only.

BRICK and DRAIN-TILE WORKS to be SOLD or LET, with immediate possession. The stock of bricks may be taken at a valuation. Ten miles from London, adjoining a railway, with a railway siding up to the brick clamps. A liberal business is done, and Lon on manure may be carried on extensively. D. B. at Brook's, Newsagent, Raquet-court, Fleet-street, London.

DUTCH CLINKERS, 32s. per thousand, by the best Makers.

WELSH, STOURBRIDGE, AND NEWCASTLE FIRE-BRICKS, LUMPS, AND TILES, at much less than cost prices. THE BUSINESS to be DISPOSED OF, with the valuable connection, and a portion of the PREMISES to carry on the same. TO BE LET, at almost a nominal rent.—For particulars inquire of the premises, Hinduras Wharf, Bankside, Southwark, London.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Brèche, dove, black and gold, Sienna, St Ann's, statuary, serpentine, verd antique, &c. Portland, Harehill, Park Spring, and other stone, in blocks and landings, and hearthstones. Yorkshire paving, granite kerbs, &c. All goods carefully packed and forwarded to any part of England.—THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Thompson being no longer his agent.

Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any other.

Mr. B. The well-known qualities of Mr. Fabbricotti's marble are illustrated throughout all Italy, England, and America.

MARBLE.—The Italian Marble Company, Importers of the produce of their many quarries in the vicinity of Masse Carrara, Italy, beg to inform the general marble trade in the United Kingdom that they are prepared to undertake contracts for any quantity of Statuary, Sienna, Veined, Slabs, &c. Works, and other Marbles, in blocks of all dimensions, delivered on board at Leghorn, or in dock, London. A constant stock is always kept at the London Depôt. Orders for Paving Slabs, Garden Seats, Statues, Vases, Tazzas, Consoles, &c., executed and delivered at reasonable rates.—For further particulars apply at the offices of the Company, 18, Cannon-street, City.

WILLIAM W. BONNIN, London Secretary.

THE LONDON and PENZANCE SERPENTINE COMPANY beg most respectfully to announce that their SHOWROOM, at No. 18, Wharf, Meadow-street North, City-road, for the sale of CHIMNEY PIECES, and other articles, of an Architectural and ornamental character, is now open to the trade generally, to inspect the same. A large assortment of the articles are also always on sale at the Company's Stall in the Mineral Manufactures Court, in the Crystal Palace, Sydenham. Estimates given, and orders promptly executed.

C. AGENEY, Secretary.

Oct 2, 1855.

THE LIZARD SERPENTINE COMPANY manufacture and sell in block and slab, the beautiful Stone raised from the lower beds of their Quarries. Chimney-pieces, Columns, Fonts, and ornamental works on view, at 29, Piccadilly-street, Strand.

HENRY COX, Manager at the Lizard.
F. W. RUFFLE, Agent in London.

TO STONE MASONS AND BUILDERS

LEO. S. TOVELL, Stone Merchant, Three Cranes Wharf, Ipswich, embraces this opportunity of asking his friends for the liberal patronage he has received, begs to inform them, and the trade in general, that he is now enabled to supply them with every description of stone of the best quality, at the lowest remunerative prices. Also hearthstones, paving, and quarries glazed and unglazed, socket drain-pipes, chimney-pots of every size and shape, and pan and plain tiles, of the best Yorkshire make. Also, wanted to purchase an OVERALD TRAVELLING CRANE, capable of lifting from 35 to 2 Price and particulars to the above address.

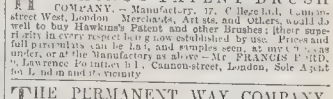
ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work. PIMLICO SLATE WORKS, 30 and 31, Upper Belgrave-place, Pimlico.

BANGOR SLATES, of all sorts and sizes; SLABS of all dimensions, and of superior quality.—For prices and particulars, apply to J. EASTWOOD and SONS, Surrey Canal-bridge, Old Kent-road.—Export orders supplied promptly.



PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.

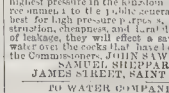
Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.

N.B. Country Agents and Railway Engineers and Contractors, supplied with fitch at the rate of a crown per Arches.

CROGGON and COMPANY, Manufacturers of PATENT ASPHALTE ROOFING, BOILER, RAILWAY, SHEATHING and INODOROUS FELT For Damp Walls, and Lining Iron Houses, 9, DOWGATE-HILL, LONDON.

PAPER-HANGINGS.—The CHEAPEST House in London for every description of PAPER-HANGINGS is CROSSS'S WHOLESALE WAREHOUSE, 21, GREAT PORTLAND-STREET, Oxford-street, where pattern sent free to the LARGEST and MOST EXPENSIVE Assortment in the kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

HAWKINS'S PATENT BRUSH COMPANY.—Manufactory, 17, College-hill, Cannon-street West, London. Merchants, Artists, and Others, would do well to buy Hawkins's Patent and other Brushes; their superfine Hair in every respect being now established by use. Prices and full particulars can be had, and samples seen, at most reasonable rates, or at the Manufactory as above.—Mr. FRANCIS FORD, 10, Lawrence-lane, Cheapside, 1, Cannon-street, London, Sole Agent for London and its vicinity.

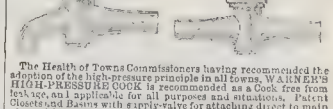


THE PERMANENT WAY COMPANY, 24, Great George-street, Westminster, holding a large number of patents relating to the construction and reparation of the permanent way of railways, are at all times ready to communicate on the subject, and grant licenses for their use. From the facilities thus afforded to companies to negotiate for a manner of inventions, much to utile and of chance of litigation is avoided. The Company are for ready arrangements for bringing new inventions on the subject before the public upon the most advantageous terms to the proprietors of patents. Applications may be made to CHARLES MAY, F.R.S. the Manager; or to

WILLIAM HOWDEN, Secretary.

TO CAPITALISTS.—FOR SALE, a SHARE of a very valuable RECENTLY PATENTED INVENTION connected with the Fine Arts, which will ensure an extensive manufacturing business to be carried on so as to realise a handsome profit without risk. The favourable opportunity may possess persons wishing to embark in a light genteel business to any amount, but a moderate amount is wanted. None but principals treated with.—For particulars apply to J. R. 26, Oxford-street.

TO WATER COMPANIES AND PLUMBERS.

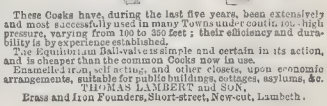


BURDEN'S PATENT HIGH-PRESSURE COCKS. These cocks are remarkably simple in their construction, very durable, cheap, not liable to get out of order, and have been most successfully used for a period of three years, under a continuous head pressure varying from 240 to 360 feet. The following is one of the latest testimonials received:—"Stirling, 4th September, 1855. At a meeting of the Water Commissioners it was unanimously resolved to recommend Burden's Water Cock for general use. It has been on trial here for nearly the course of a year during that period it has successfully resisted the high pressure of water in Stirling, amounting to from 200 to 400 feet, about the highest pressure in the kingdom. The Commissioners consequently intend to fit up publicly generally the above cocks, as the very best for high pressure purposes, from the simplicity of its construction, cheapness, and durability. Owing to the entire absence of leakage, they will effect a saving of from 15 to 20 per cent. of water over the cocks that have been hitherto in use. By order of the Commissioners, JOHN SAWERS, Provost Chairman."

SAMUEL SHEPPARD, & Co. Manufacturers,
JAMES STREET, SAINT PAUL'S, BIRMINGHAM.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.



The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as the most free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

PRIZE MEDAL, CLASS 3.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

Gentlemen,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HODGAN, Engineer.

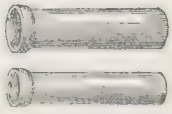
Royal Arsenal, Woolwich, June 24, 1852.

Gentlemen,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

JAMES STIFF,

MANUFACTURER OF GLAZED STONEWARE DRAIN PIPES, WATER-CLOSET PANS, SINK TRAPS, INVERT BLOCKS, AND ALL OTHER ARTICLES SUITABLE FOR DRAINAGE AND OTHER PURPOSES.



LONDON POTTERY, HIGH-STREET, LAMBETH, LONDON.

OFFICES: HIGH-STREET, LAMBETH, LONDON.

TWENTY-ONE LARGE AND IMPORTANT TOWNS HAVE BEEN DRAINED WITH DOULTON'S GLAZED STONE-WARE PIPES, *and in no case has the slightest failure occurred.*

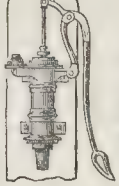
Messrs. D. and Co. do not publish Testimonials, but references can be given to any of the Engineers and Surveyors under whom they have executed works. DRAWINGS, WITH PRICES, MAY BE HAD ON APPLICATION AS ABOVE.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

STEAM-ENGINES.—TWO PORTABLE STEAM-ENGINES TO BE LET or SOLD, also for Sale, several small Stationary Engines, and Two Drilling Machines.—Apply to D. W. ASH, 187, South-wark-bridge-road, Newington-causeway.

TO WATER AND DOCK COMPANIES, CONTRACTORS, &c.

PARSEY'S PATENT REVOLVING PUMP will throw more water with one-third the labour as any other pump. One of these pumps at work at No. 71, Strand.



To LOCAL BOARDS of HEALTH and GAS and WATER COMPANIES.—FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description; locomotive engines for all works connected with hydraulics or gas. Pumps let on hire.

W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

TO CONTRACTORS.

PORTABLE STEAM-ENGINES TO BE LET, on HIRE, by the WEEK, MONTH, or for a period, of 8-horse, 10-horse, 12-horse, 18-horse, 30-horse, and 4 horse power, adapted for Contract work generally. These engines have been successfully employed for years by all the principal contractors, and are ready for delivery at a day's notice. Several may be seen at work.—Apply to Messrs. MEDWIN, HALL and CO. Ludgeers, 92, Blackfriars road, Sole Patentees and only Manufacturers.—N.B. Any of these Engines may be purchased.

VAST IMPROVEMENT in PUMPS.—PARSEY'S REVOLVING PUMP, all metal, without valves, leather, or packing. Liability of choking and disarrangement removed; and equally superior for hot or cold liquors. Contractors, brewers, distillers, shipowners, water and gas companies, agriculturists, &c. are hereby to see them in action at MR. PARSEY'S Depôt, Great Scotland yard, where orders are received and executed.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP, which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than Pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 23 feet, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,
8, Crescent, Jewin street, London,
Manufacturers and Patentees.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

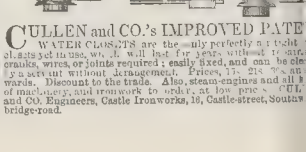
PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 38s. per doz. painted.
Ditto .... 48s. per doz. galvanized.

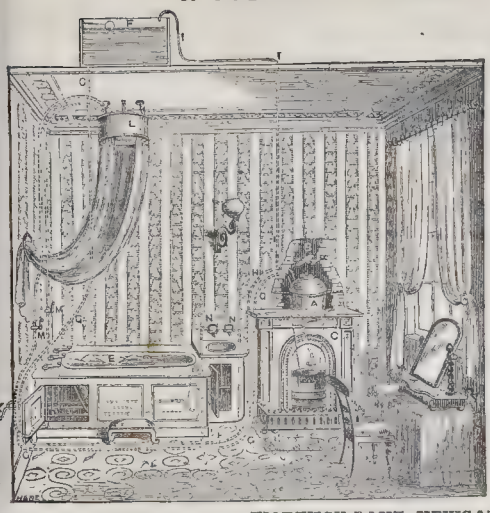
Upper Ground-street, Blackfriars Bridge, Surrey Side.



DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—

SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT.
—Second Testimonial.—March 13th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately applied it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the Chairman of the GUTTA PERCHA COMPANY, RESIDE WATER of the ISLE of WIGHT has no effective Gutta Percha Tubing.



THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY ROAD, LONDON.

CHAS. MACINTOSH and CO. Patentees of the VULCANIZED INDIA-RUBBER, and GENERAL MANUFACTURERS of WATERPROOF, AIRPROOF, ELASTIC RUBBER GOODS beg to inform all persons who desire to correspond with them direct, that their SOLE ESTABLISHMENTS are No. 3, Cannon-street West, London, and Cambridge-street, Manchester. This notice is necessary, as the term Macintosh Depôt, Macintosh Warehouse, &c. is frequently adopted both in London and the country by vendors of India-rubber goods, who deal in articles not of the manufacture of CHAS. MACINTOSH and CO.—Goods manufactured by CHAS. MACINTOSH and CO. are stamped with the name of the firm.

CULLEN and CO.'s IMPROVED PATENT WATER CLOSETS are the most perfectly practical closets yet in use, which will last for years without repair, cranks, wires, or joints required; easily fixed, and can be cleaned by a servant without derangement. Prices, 7l. 2l. 7s. and 8l. 8s. Discount to the trade. Also, steam-engines and all kinds of machinery, and ironwork to order, at low prices. CULLEN and CO. Engineers, Castle Ironworks, 16, Castle-street, Southwark-bridge-road.

J. TYLOR AND SON'S BATH APPARATUS.

To fix a Bath, the apparatus for heating which can be fixed in the same room, and the luxury of an Open Fire retained.

A. Copper Boiler of sufficient capacity to make a warm bath, clasped by an iron band to support it, and fixed in the breast-work of a chimney. A flue is carried all round, and the draught is regulated by a revolving damper, *B*, which covers the opening into chimney. When set, the Boiler is entirely concealed from view.

This Boiler can be adapted for any chimney, by making it of an oval or elongated form.

A soot-door is fixed just underneath the damper for the convenience of cleaning, which, however, is rarely required, on account of the great draught round the boiler preventing any deposit of soot.

C. An ordinary stove front with sliding blower for the additional regulation of the draft.

E. Copper or tinned iron Bath, enamelled white marble inside, having three copper pipes, for the hot, cold, and waste water, which are indicated by the engraved levers on the cocks. The overflow is carried into waste-pipe *K*.

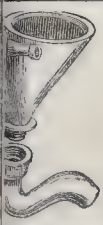
F. Cistern for cold water, say 100 gallons, which can be made of tinned iron, or any suitable material, either fitted into a recess or made of a cylindrical shape to stand on the floor of any room above the bath. The overflow can be carried into the waste or other convenient outlet.

G. Inch pipe from cistern to the pipe which goes to the bottom of boiler to fill it with water. A branch from this pipe also supplies the bath with cold water.

H. Inch pipe from the top pipe of boiler, to deliver the hot water into bath.

I. Half-inch pipe taken from the hot pipe *H*, and turned over the top of cistern to relieve the boiler.

K. Inch or 1½-inch pipe to take away waste water from bath into soil-pipe or drain, as may be most convenient, and must be well trapped before entering.



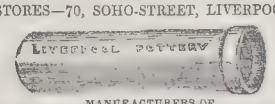
L. Round copper or tinned iron Shower Bath, suspended from ceiling, and filled with hot or cold water by branches from the pipes *G* and *H*, the supply being regulated by the two cocks *M M*, which are let in the wall, and have levers fixed on them, engraved, "hot and cold shower."

A thermometer can be fixed in the shower-bath to regulate the temperature.

N N. Wash-hand basin supplied with hot and cold water, by branches from the pipes *G* and *H*, the waste being carried into the overflow of bath.

By this simple arrangement, the boiler is always kept full of water, and cannot, by any means, be emptied by the action of the fire. The draught is so regulated by the blower and damper, that a bath can be made in twenty minutes, or an open fire kept continually alight.

WARWICK-LANE, NEWGATE-STREET, LONDON.



REDUCTION IN THE PRICE OF CLOSET-PANS.

DOULTON AND WATTS,
LAMBETH POTTERY, HIGH-STREET, LAMBETH,
Have reduced the Price of their PATENT ENAMELLED CLOSET-PANS WITH TRAPS, to

SALES BY AUCTION.

DESIRABLE INVESTMENT.

MR. PENNINGTON has been instructed by the Directors of the Cork, Blackrock, and Passage Railway Company TO SELL by AUCTION, at the SALES-ROOM, 81, Patrick-street, Cork, on WEDNESDAY, the 31st day of OCTOBER, PURCHASE-MONEY, in the following LEASEHOLD PREMISES, known as the VICTORIA BATHS and HOTEL, the handsome marine residence of the late Philip Cornell, esq., and the FRONT of BUILDING GROUND ADJOINING, containing a frontage of about 750 feet, all held under lease for a term of ninety years and six months, from the 24th August, 1854, at the yearly rent of 70*l*. These premises a party, on which a sum of over 5,000*l* has been expended, is within a few minutes' walk of the railway terminus at Passage, and about an equal distance from Monkstown, both places of considerable resort, from which steamers ply every half hour to and from Queenstown. It is beautifully situated on the River Lee, and possesses the important feature of a quay and the shore to the south-east, which is now being filled in and will be fitted up in the best manner, and when complete will afford a delightful promenade for the visitors to the Baths, &c. The grounds are tastefully laid out in walks and flower-beds, and are well stocked with fruit trees, &c. The premises comprise the Victoria Baths, with dressing-rooms, &c., and the Hotel, containing coffee-room, drawing-room, billiard-room, and seven bed-rooms, with kitchen, &c., and are held by him, part under a lease for eighty-six years from the 1st May, 1854, at the yearly rent of 25*l*., and part under a lease for a term of twenty-one years, from the 1st May, 1854, at the yearly rent of 40

METROPOLITAN BUILDINGS ACT.
Office of Metropolitan Buildings,
6, Adelphi-terrace Strand, Oct 2, 1855.

NOTICE.—An Examination of Persons desirous of obtaining a Certificate of Qualification for the office of DISTRICT SURVEYOR, will take place on MONDAY the 29th day of OCTOBER instant, at ONE o'clock p.m. Persons desirous to be examined, must apply on or before the 27th of OCTOBER instant, and the application must be accompanied by a preliminary statement according to the course of examination prescribed in the rules for that purpose, copies of which may be had at this Office. Signed ARTHUR SYMOND,
Registrar of Metropolitan Buildings.

BOARD of TRADE DEPARTMENT of SCIENCE and ART.—INSTRUCTION in ART.—TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL MALL, LONDON.

Art Superintendent—RICHARD REDGRAVE, Esq. R.A.
Head-Master—R. BURCHETT, Esq.

The Course of Instruction pursued in the School have for their object the systematic training of teachers, male and female in the practice of art and in the knowledge of its scientific principles, with the view of qualifying them to impart to others a careful Art-education, to develope its relation to the requirements of trade and manufacture and its application to the common uses of life. Special courses are arranged in order to qualify Schoolmasters of Parochial and other Schools to teach Elementary Drawing as a part of General Education concurrently with Writing.

The Instruction comprehends the following subjects:—Free-hand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera and Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, Objects of Still-life, &c., the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art. Also, Classes for instruction in the technical processes of China and Enamel Painting, Drawing and Painting on Wood, and Lithography in Chalk and Colour. The two last classes for female students only.

Hours of Study—Morning, TEN to THREE; Evening, SEVEN to NINE, daily, except Saturdays. Fees 1l per session, or part of the session. For Evening Classes only, 2l per session.

The Class for Practical Geometry and Perspective, or that for Moulding and Casting, may be attended separately on payment of a fee of 1l per session.

Students have full access to the valuable collections of the museum and library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students not in training, is at 37, Gower-street, Bedford-square. Superintendent, Mrs. M'Ian. Fees per session.—Advanced Class, 2l. and 4l.; Elementary Class, 1l.; Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall mall, London.

THE ARCHITECTURAL MUSEUM, Cannon-row, Westminster.—Autumn Session, 1855.—On MONDAY, OCTOBER 29th, a Lecture will be delivered at the Museum, on ARCHITECTURAL METAL-WORK, by F. A. SKIDMORE, Esq. Hour of admission, 7 o'clock. The chair to be taken at 8 o'clock. Cards for the Course of Lectures may be had at the Museum, and at the Office of "The Builder." The Museum is now open on the Evenings of MONDAY and WEDNESDAY, between the hours of SEVEN and NINE.—Admission to art workmen free. HENRY CLUTTON, Hon. Sec.
October 18th, 1855

ARCHITECTURAL EXHIBITION.—PACKAGES from the FRENCH EXHIBITION, whether of Drawings or Specimens for the Department of Materials, Patents, &c. may be sent direct to the Galleries, Suffolk street, Pall-mall East—notice to the Honorary Secretaries being first of all given. All other contributions on the 3rd and 4th DECEMBER next. Every information may be obtained of

JAMES FERGUSSON, F.R.A.S. 20, Langham-place.
JAMES EDMESTON, Jun. 5, Crown-court, Old Broad street, } Honorary Secretaries.

EVENING LECTURES at KING'S COLLEGE, LONDON.—On and after MONDAY, OCTOBER 29th, KING'S COLLEGE will BE OPEN on Five Evenings in the Week for Classes in the Hebrew Scriptures, Latin, French, German, English Language and Composition, Modern History and Geography, Mathematics, Arithmetic and Book-keeping, Italian, Spanish, Figure and Model Drawing, the Elements of Chemistry, and on the Principles and Practice of Commerce.

A prospectus will be forwarded, on application to J. W. CUNNINGHAM, Esq. King's College, London; and full information may be obtained at the College from Ten to Four daily, and from Six to Eight every evening, except Saturday.
October 17, 1855. R. W. JELF, D.D. Principal.

MINING SCHOOL in CORNWALL.—A School for the instruction of pupils in the following branches, has been commenced, and is now in operation, at Truro, viz.:—

PRACTICAL MINING, including drilling, surveying, and general mining operations.

CHEMISTRY, in its various branches, more especially as it is applied to mining and metallurgy.

MATHEMATICS, as applied to engineering generally.

Instruction may be obtained in any one of the above-named branches separately.

The terms of admission are the payment of 2ol. in advance for two years, or 12l. for one year. The period of attendance from the 1st October to the end of June, with the exception of a vacation at Christmas. A public examination will be held at the end of each session, when certificates of proficiency will be conferred and an exhibition of 3ol. will be awarded to the best qualified pupil, to enable him to proceed to the Government School of Mines, in Jermyn-street, London.

Further particulars may be obtained on application to
W. H. BOND Honorary Secretary.

COMPETITIONS.

TO ARCHITECTS, &c.

THE BURIAL BOARD for the PARISH of TOTTENHAM, in the County of Middlesex, are desirous of receiving PLANS and ESTIMATES for TWO CHAPELS, to be erected in the New Burial Ground of the said Parish. It is proposed that such chapels should be connected by an archway, and either from the gate now in the ground, or from a gate to be made in a new entrance. The whole or no more than one plan of the ground, and other information, on application to Mr. W. H. CUNNINGTON, Vestry Clerk, Tottenham, to whom Drawings and Estimates must be delivered on or before FRIDAY, NOVEMBER 2nd, 1855.

WHITECHAPEL WORKHOUSE.—The Guardians of the Whitechapel Union beg to inform the Architects who applied relative to the Erection of the above Workhouse, that having originally sixty-seven applications, they with much difficulty made a selection of twenty-seven gentlemen. This number was again reduced to six, from which number they on Tuesday last appointed Mr. THOMAS BARRY.

G. A. AMS PARR, Clerk to the Guardians.
1, Princes street, Spitalfields, 12th October, 1855.

CONTRACTS.

OXFORD PAVING ACTS.—CONTRACT for PAVING.—Persons desirous of TENDERING for PROVIDING and LAYING YORK CURB and PAVING for FOOTWAYS, and GRANITE PAVING for ROADWAYS, and other Works for the Oxford Paving Commissioners, for the term of One Year, from the 1st of JANUARY, 1856, may see the specifications and obtain forms of Tender at the Surveyor's, at the Commissioners' Office, Town Hall Buildings, from NINE to FOUR, or by letter, addressed to Mr. J. GRIFFIN, the Surveyor. Sealed Tenders, to be delivered at the Commissioners' Office on or before MONDAY, NOVEMBER 5, endorsed "Tender for Paving."

By order of the Commissioners,
FREDERICK J. MORRELL, Clerk.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Court-house, No. 1, Greek-street, Soho-square, on TUESDAY, the 23rd day of OCTOBER, instant, at ONE o'clock p.m. precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for the LAYING DOWN, CONSTRUCTING, and COMPLETELY FINISHING certain intended BRICK and PIPE SEWERS, 3,973 feet in length, or thereabouts, with other Works in connection therewith, in Brockley-lane, Ladywell, Lewisham; Perrybill, Sydenham; and other places in the county of Kent; and the maintenance of such works in complete repair for twelve calendar months. Plans, sections, and a specification of the above works, together with the form of Tender, may be inspected, and other particulars obtained at the principal office of the said Commissioners, No. 1, Greek-street, Soho-square, between the hours of NINE and FOUR o'clock, until the 22nd instant. The said Commissioners do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two sureties for the due performance of the said works. No Tender will be received after the hour above mentioned.

E. H. WOOLRYCH, Secretary.
No. 1, Greek-street, Soho-square.
Dated this 17th day of October, 1855.

PUMPING-ENGINE.—The Committee acting under the Hereford Improvement Act of 1854, are prepared to receive TENDERS from parties who may be willing to undertake the CONSTRUCTION and ERECTION of a PUMPING ENGINE for the Hereford Waterworks. A description of the engine required, with all the particulars, may be obtained on application to Mr. T. CUBLEY, C.E. Tenders to be sent in on or before TWO o'clock, p.m. on MONDAY, the 29th day of OCTOBER next, addressed to the Committee of the Hereford Improvement, and endorsed, "Tender for Pumping-Engine." The Committee do not pledge themselves to accept the lowest or any Tender.
By order of the Committee, T. CUBLEY, C.E.
Hereford Improvement Office, 19th September, 1855.

CONTRACTS.

The plans and specification and conditions of contract may be seen and every information obtained upon application to Mr. HAWKEN, Clerk of Works, at that office, any day (Sundays excepted) until the 5th NOVEMBER next, and where forms of Tender may be obtained. N.B. The Ordnance reserve to themselves the right of rejecting all or any of the Tenders.
Portsmouth, Royal Engineer Office, October 19, 1855.

Royal Engineer's Office, Portsmouth, 5th October, 1855.

NOTICE to BUILDERS.—Notice is hereby given, that TENDERS will be received at the Ordnance Office, Pall mall, London, from such persons as may be desirous of entering into a CONTRACT for the ERECTION of proposed CASEMATED BARRACKS, and for the completion of the Fort behind Fort Head, Down, near Stokes Bay, Gosport, in the parish of Alverstoke, in the county of Hants. Plans and specification may be seen at the Royal Engineer Office, Portsmouth, where forms of Tender may be obtained every day (Sundays excepted) until the 5th day of NOVEMBER, 1855. Tenders are to be delivered on or before the 7th NOVEMBER. The Ordnance reserve to themselves the right to reject the whole or any of the Tenders. No notice will be taken of any Tender unless made on the printed forms, to be obtained at the Royal Engineer Office, Portsmouth.

NOTICE to BUILDERS.—Royal Engineer's Office, Portsmouth, October 8, 1855.—Notice is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, from such persons as may be desirous of entering into a CONTRACT for the ERECTION of proposed SCHOOL ROOMS and SCHOOLMASTERS QUARTERS, at H. M. Barracks and Fort Pitt, Chatham, Kent. Plans and specification may be seen at the Royal Engineer Office, Portsmouth, where forms of Tender may be obtained every day (Sundays excepted) until the 27th OCTOBER. Tenders are to be delivered on or before the 29th OCTOBER 1855. The Ordnance reserve to themselves the right to reject the whole or any of the Tenders. No notice will be taken of any Tender unless made on the printed form, to be obtained at the Royal Engineer Office, Portsmouth.

GREAT GRIMSBY WATERWORKS and DRAINAGE.—The Local Board of Health of Great Grimsby desire to receive TENDERS for the CONSTRUCTION of WORKS for supplying the town with water and for draining the town. The work required to be done consists of supplying and laying upwards of 6 miles of cast-iron pipes, making and fixing 2 pairs of engines and boilers, and wrought-iron tank; building tank tower, engine house, boiler house, and various other work, according to the drawings and specifications which may be seen at the Office of the Surveyor to the Local Board of Health, from the 24th of this month to the 30th of NOVEMBER next, inclusive. Tenders are to be sent in sealed to the Clerk to the Local Board of Health Town clerk's Office, Great Grimsby, on or before the 11th day of NOVEMBER next. The Board do not bind themselves to accept the lowest or any Tender.—By order, GEO. BABB, Clerk to the Local Board of Health.
Great Grimsby, Oct 9 to 17, 1855.

SHIPLEY WATER-WORKS.—To WROUGHT-IRON TUBE MANUFACTURERS, BRASS-FOUNDERS, PLUMBERS, and OTHERS.—The Local Board of Health for the District of Shipley are prepared to receive TENDERS for the following CONTRACTS:—

CONTRACT No. 6.—For the supply of Plain Iron Galvanized Iron, and Lead Piping, Hydrants, Cocks, Turncocks, and other Fittings for house service water supply.

CONTRACT No. 7.—For Excavating the Ground, Stopping Mains, Laying, Jointing, and Repairing Pipes, Cocks and other Fittings for house service water supply.

Specifications may be inspected, and printed forms of Tender obtained, at the Offices of Mr. J. McLANDSBOROUGH, Civil Engineer, 24, Queensgate, Bradford, from whom any further necessary information may be procured. Sealed Tenders, properly endorsed, must be sent to me on or before MONDAY, the 29th of OCTOBER next ensuing.

By order, JO. THOMPSON, Clerk to the Local Board.
Bradford, October 1st, 1855.

TO CONTRACTORS AND OTHERS.

CONTRACT.—The COMMISSIONERS of HIGHWAYS for the ISLE of WIGHT are prepared to receive TENDERS for forming and completing a NEW ROAD, from Little Park to Shanklin, on the road from Carisbrooke towards Calbourne, in the Isle of Wight, being in length about 1 mile and 220 yards, or thereabouts, and in forming the existing down of Apse Down and Shanklin Down, and for the purpose to make Embankments and Cuttings where required, to lay down Bunnies and Culverts, and to do all other necessary works, in accordance with the plan, section, and specification to be deposited for inspection at the Office of Mr. ENTWISTLE, Clerk to the said Commissioners, at Newport. All persons willing to contract with the Commissioners of Highways for effecting the above improvements, are requested to forward Tenders, addressed "To the Chairman of the Commissioners of Highways," at the Guildhall, in Newport, on THURSDAY, the 25th day of OCTOBER instant, by TWELVE o'clock. Further particulars may be known on application to the General Surveyor, Mr. J. WHITE, Sen. Esq. of Newport, Isle of Wight. The Commissioners will not bind themselves to accept the lowest Tender.

By order of the Commissioners,
CHARLES WYATT BESTCOURT,
Clerk to the said Commissioners.
Newport, Isle of Wight, Oct. 2nd, 1855.

[For remainder of Contracts see next page.

CONTRACTS.

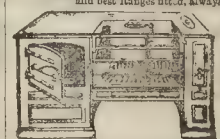
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.



NEW PATENT MACHINE for MORTISING and TENONING HAND or FOOT-Wood and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinet-makers, and others, using similar work, are invited to call at the Patentee's, DOWIE, JAMES, and Co. Wheelwrights and Cabinet Makers, Ironmongery Establishments, 26, Wattle-street, City, and see in action this very simple, powerful, and expeditious machine, which is readily one set brought out, for performing these separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the other inventions introduced. In fact either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

CLARK and HUNT'S IRONMONGERY, STOVE, and METAL WAREHOUSE, 15a, Shoreditch. A great variety of Elliptic, Register, and other Stoves, Cottage and Best Ranges fitted & Stock.

Improved Self-acting Cottage Ranges, with Large Oven and Boiler, 20 22 24 26-inch. 28s. 30s. 32s 34s.

Best self acting Ranges, with Oven and Back Boiler, Bright Wrought Bars—

24 36 33 42-inch.
62s. 56s. 58s. 66s.

Strong Elliptic Stoves, with Extra Back and Solid Bars, per in. 9½d.

Register Stoves, with Solid Bars, per inch, 5d.

Improved New Pattern Circular Check Register, with strong Bars and Trivits, 5d per inch.

Best Oven ditto, with Fire Brick Back, per inch, 10d.

Bright Stoves, with Two Fires, 40s. to 100s. each.

Cast Rain-water Pipe {	2	2½	3 inch.
	11d.	1s. 2d.	1s. 4d. per yard.
Cast Gutters—4 inch, 9d. per yard.			
O G Gutters {	4½ inch.		
	1s. 1d.		1s. 3d per yard.
Patent Line {	5	6	8
	4½d.	5d.	7d. 9d. 1s. per knot.

6-inch Rd. Ward Mortise, with best Furniture and Patent Spindles, 3s. 6d. each. Light Elliptic and Register Metal, 14s. per cwt.

Dr. Arnott's Ventilators, 4s. 6d. each.

An extensive stock of bar, rod, hoop, and sheet iron.

Brick Moulds kept in stock. Any size made to order.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trade, to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Elliptic Stoves, double backs, 3d. per inch, and upwards.

Register Stoves, 3d 4d. 7d. 8d. and 9d. per inch.

Self-acting Ranges, with circular ovens and back boilers, best wrought bars and bright fittings:—

3 ft., 2l. 18s.; 3 ft. 6 in., 3l. 3s.; 4 ft., 3l. 18s.

3-feet Cottage Ranges, with ovens and back boilers, 35s. each.

2-feet self-acting ditto, ditto, 36s. each.

Air Bricks, 3s. per doz.

Best Town Glue, 36s. Ditto, Scotch, 60s. per cwt.

Best Patent Sash Line.

1	2	3	4	5	6
4s. 6d.	5s.	6s.	7s. 6d.	8s. 6d.	11s. per gross.

And every material required in the building, bell-hanging, upholstery, and brass-foundry trades on the most reasonable terms.

List of Prices had on application at the Warehouse, or by letter prepaid

PARAGON ZINC WORKS, Paragon-place, New Kent-road, opposite Bermondsey New road.—JOHN BROWN, Zinc Worker, begs to inform the building trade and the public generally, that he now makes hips, patent ventilating and smoke curing Albert chimney caps, he having the patentee's permission for the same. Every description of zinc work executed in town and country. Terms—Cash, a liberal discount on large orders. Baths, skylights, sashes, moulded gutters, &c. made to order or drawing.

ESTABLISHED 1817

WILLIAM HARMER'S Smiths' Works, Stove and Range Manufactory, and Ironmongery, Metal, and Zinc Warehouse, 19, Horseferry-road, and 1, New Peter-street, Westminster.—Contractors, Builders, &c supplied with General Ironmongery at the lowest wholesale prices.

Cottage Ranges, with oven or boiler, complete, 22s. each.

Self acting ditto, with ditto, from 28s.

Self-acting Oven and Boiler Ranges, with wrought fittings, &c.

Register Stoves, complete, from 4s. each.

Register Stoves, from 5d. per inch.

Elliptic ditto, with double backs, from 2½d. per inch.

Cast-iron Rain-pipe {	2	2½	3 inch.	
	11d.	1s 2d	1s 4d. per yard.

	1s. 1d.	1s. 2d.	1s. 3d.	1s. 6d per yard.
Best Cut Clasp {	1½	2	2½	3 inch and larger.
and Rose..... {	16s. 6d.	18s. 6d.	20s.	14s. 6d.

1-inch Best Cut Lath, 16s per cwt.

1-inch Inferior Floor Brads 14s. per cwt.

Hoop Floor Brads, 13s. 6d. per cwt.

Sash Weights, 7s. 6d. per cwt.; 9-inch Air Bricks, 3s. 6d. per doz.; 6-inch Sink Traps, 3s. per doz.; strong Coal Plates, with hooks, 20s. per doz. Sheet Zinc, Perforated Zinc and Tubing. Estimates given for Iron Railing, Gates, Balconies, and Ironwork of every description.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator Complete pattern-book and price list, 10s.—55 and 56, High Holborn.

NAILS and IRONMONGERY, from BIRMINGHAM direct.

Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the

LOWEST BIRMINGHAM PRICES

a complete LIST of which will be forwarded upon application.

FREDERICK BLYTH,

Nail Manufacturer and General Factor,

Regent-parade, BIRMINGHAM;

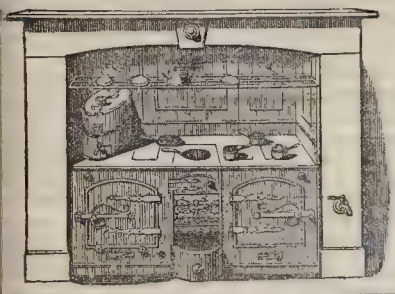
or at 16, Gresham-street, LONDON.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to



THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

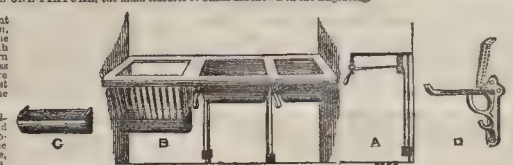
The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:

BENHAM AND SONS.



19, WIGMORE-STREET, LONDON;

and at the Crystal Palace, Sydenham.

NEW PATENT INVENTION FOR STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street,

are made important additions to their original Invention of PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, the main features of which are shown in the Engraving.

A represents the Patent Water-guide and Collar-rein, the fall of which is taken up to the back of the manger-works with freedom and ease up or down the guide-bar, and is noiseless in its operation, as also a sure preventative against the most vexatious horse being cast in the stall.

B. The Patent Portable Seed-box can be instantly detached from the rack without disturbing the hay. The saving of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

C. The Seed-box detached, made of galvanized sheet-iron, light and durable.

D. The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAM'S MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, durable, and longer open to infection. Manufactured plain, galvanized, and enamelled.

IMPROVED SURFACE-DRAIN, with safety covers; Sanitary Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Preserving Saddle and Harness Brackets, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

Estimates and Catalogues on application.

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

CUNDY'S PATENT PURE WARM-AIR STOVES, the only Pedestal Stove which gained a Prize Medal (Class 27), at the Great Exhibition in 1851, especially adapted for warming, with great economy, Churches, Chapels, Schools, Entrance halls, Libraries and Ware rooms.—CUTLER and SONS, Sole Licensees and Manufacturers, 16, Great Queen-street, Long-acre, London.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, submit the attention of architects, &c. &c. to their superior APPARATUS At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 3s. 6d. This achievement in heating by hot water is unprecedented.

BUILDINGS HEATED by HOT WATER. G. B. COOPER, IRONWORKS, 121, DRURY-LANE. Ranges, Hot Plates, Gas Cooking Apparatus, Baths, &c. Ornamental and Constructive Ironwork.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, cinders, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at DEFRIES'S Office, 145, Regent-street, London.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc, Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, as used and the new registered Venetian Ventilator, so much admired, &c. &c. &c. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

No. 1081, Class 4, Section 16, BRITISH DEPARTMENT of the PARIS UNIVERSAL EXHIBITION, 1855

A. MOREWOOD and CO. (late Morewood and Rogers),

Dowgate Dock, Upper Thames-street, London, and Baskerville Works, Birmingham,

PATENT GALVANIZED TINNED IRON, and GALVANIZED IRON, in Sheets.

PLAIN or CORRUGATED, and Curved, of all Gauges.

Manufactured articles always kept in stock, such as pails, scoops, bowls, riddles, skips, &c. of all sizes.

Also the Patent Galvanized Tinned Iron Tiles, Gas and Water Tubing, Stamped and Moulded Gutters, Wire, Wire Netting, Hooping, Nails, Rivets, &c.

Estimates given for Roofs, and every description of Galvanized Building, at the

OFFICES and WAREHOUSE, DOWGATE DOCK, LONDON.

JOHN WALKER,

MANUFACTURER OF ROOFS, BUILDINGS, &c. &c.

Works—Mill-wall, Poplar.

Offices—Arthur-street West, London-bridge.

PATENT GALVANIZED IRON.

JOHN WALKER,

GALVANIZED IRON MERCHANT, &c. The trade supplied Corrugating by steam power capable of doing 1 tons per day, at the lowest remunerative prices, for bulk.

IRON-FOUNDER, &c.

JOHN WALKER,

IRON-FOUNDER AND ENGINEER.

Orders to any extent can be executed at his Works, Mill-wall, Poplar. Apply at the Works.

BUILDER AND CONTRACTOR.

JOHN WALKER,

Having his own Saw-mills is enable to CONTRACT for BUILDERS' WORK.

At low prices, established with good work.

Apply at his Offices, Arthur-street West, London-bridge.

PATENT GALVANIZING and CORRUGATING IRONWORKS (Improved Process).

WORKS—GLASS-HOUSE YARD, opposite the Entrance to THE TOWER, LONDON.

GALVANIZED SHEET IRON and WIRE of every description superior in all respects to that produced by any other process THE TOUGHNESS AND MALLEABILITY of the Iron being preserved.

ESTIMATES given for IRON ROOFS, Corrugated Sheds, Houses, &c.

A Discount allowed to the Trade.

SKAIFE'S GALVANIZING WORKS, Commercial-road, Limehouse, London.

Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required.

Patent Galvanized Iron supplied in every form.

Sheets plain and corrugated. Roofs fixed complete.

J. Skaife is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, Planing Zinc, and Tiles.

An Allowance to the Trade.

SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY REMOVED from BRISTOL to BOW, near London, close to the New Railway Station.—A large variety of buildings always on view, churches, chapels, shooting boxes, lodges, cottages, ornamental villas, dwelling-houses, farm buildings, and fire-proof stores. Also, railway stations, trusses, and carriages made to any plan on the shortest notice.

PATENT IRON ROOFING and IRON BUILDING MANUFACTORY (late the Cosborough Company's premises), 14, James-street, Liverpool.—N.B. Parties are particularly requested to note the address. LIVERPOOL. FRANCIS MORTON and Co. will supply estimates, plans, &c. for Iron Roofs and Iron Buildings, manufactured or fabricated, to be erected in any part of the United Kingdom. Roofs and buildings prepared from their long experience, and the erection of such work on the most moderate terms consistent with good materials and workmanship.

N.B.—The attention of Agriculturists and Landed Proprietors is particularly invited to their Corrugated Iron Farm Buildings, Sheds, Roofs, &c.

TUPPER and CARR, Contractors and Manufacturers of all sorts of IRON ROOFING.

PLAIN, CORRUGATED, PAINTED, or GALVANIZED.

Estimates and Drawings furnished on application.

Experienced Workmen sent to all parts of the Country.

3, MANSION-HOUSE PLACE, and LIMEHOUSE, LONDON; BERKLEY-STREET, BIRMINGHAM.

TUPPER and CARR'S (Craufurd's) PATENT GALVANIZED IRON.

For Roofs, Flats, Cisterns, Tubing, Gutters, Pipes, Fencing, &c.

To be obtained only at

TUPPER and CARR'S WAREHOUSES, REGENT'S CANAL DOCK, LIMEHOUSE, LONDON; and BERKLEY-STREET, BIRMINGHAM.

Sheets, Bars, Rods, Hoops, Nails, Rivets, Screws, Wire, and Manufactured Articles, Pails, Coal-scoops, Buckets, Pumps, &c. always in Stock.

N.B. An allowance to the trade.

Address all letters to TUPPER and CARR, 3, MANSION-HOUSE-PLACE, CITY, LONDON.

TO ARCHITECTS, BUILDERS, AND THE TRADE.

PATENT PLUMBIC ZINC.

GREAT REDUCTION IN PRICE.

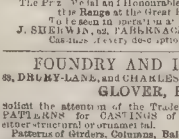
PLUMBIC ZINC is a perfect combination of Lead and Zinc, and not requiring to be more than one-fourth, or one-fifth as thick as Sheet Lead, is consequently very much more cheap than that material, and at the reduced price costs but little more than Sheet Zinc.

No.			
No. 11 gauge weighs about	18	oz.	per foot super.
12	"	20	"
13	"	24	"
14	"	28	"

Full particulars and the reduced price sent by post on application to

A. MOREWOOD and Co., DOWGATE-DOCK, LONDON, to whom all letters must be addressed.

JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders and others, requiring to finish the superior Iron as manufactured by them for that purpose, in point of lightness, cheapness, durability, cheapness of construction, and being fire-proof. Drawings and estimates furnished.



Island Foundry and Ironworks, Millwall, London.

Offices: 12, Fenchurch-street, City.

CANNON IRON FOUNDRY, 80, Goswell-street, St. Luke's.—JONES and BLANTON, have made great additions to their STOCK of PATTERNS, best to inform the Trade that they can now supply them with Cast Ornamental Iron Columns, Girders, Railings, Gates, Iron Cornice, Balconies, Window Guards, Verandahs, Ornamental Staircase Panels, Iron Staircases, Tomb Enclosures, Iron Fencing, Lamp and other Brackets, Cantilevers, Newel Bars, Water Closet Work, Area Gratings, Fly and other Wheels, Wheel Plates, &c.

BAKERS' OVEN WORK, Forge Backs and Troughs, Rain Water Pipes and Gutters, Sash Weights, Furnace Bars, Stoves, Ranges, &c. always in stock.

IMPERIAL IRON FOUNDRY, and ECONOMIC RANGE MANUFACTORY.

Three ft. wide	£6 10
Three ft. three in.	7 0
Three ft. six in.	7 15
Three ft. nine in.	9 0
Four ft.	10 10
Four ft. six in.	12 12
Five ft.	14 14

Cornice 9s per foot.

Fixing 5s per foot.

The celebrated KITCHEN RANGE, the Manufacturer has much pleasure in stating has given universal satisfaction. It may be used either with the fire open or closed, thereby avoiding the objection so many ply felt against having the fire all time shut up, which is well known to generate a close unwholesome vapour.

The Prize Medal and Honourable Mention was awarded to the Range at the Great Exhibition of 1851.

To be seen in operation at the Manufacturer's,

J. SHERWIN, 82, FARRINGDON-STREET, FINSBURY.

Catalogue of every description of Iron or Steel.

FOUNDRY AND IRON WORKS,

83, DRURY-LANE, and CHARLES-STREET, DRURY-LANE.

GLOVER, BROS.,

solicit the attention of the Trade to their extensive Stock of PATTERNS for CASTINGS of EVERY DESCRIPTION, either structural or ornamental.

Patterns of Girders, Columns, Balconies, Railing, Ornamental Carriage and Park Gates, Lamp and Street Posts, Tazzas, Pipes, Wheels, Pinions, Lathes, and Steam-engines; Range and Hot-plate Metal. An improved Soot Door, adapting for furnished work.

A large stock of Rain-water Pipes, Pans, and OG Gutters, Air-bricks, Sash Weights, Air-tight Sewer Grates, Stable Fittings, Hurdles, &c.

Plain and Ornamental Vases 20 per cent. cheaper than Terra-cotta.

Estimates given for Iron Buildings, Wrought-iron Roofing, Greenhouses, Staircases, Wrought-iron Girders, Fireproof Doors, Hook-and-bolt Strong Rooms, and every description of Ironwork to specification, and the work executed with every attention to quality and despatch.

GLOVERS' IRONWORKS,

165, DRURY-LANE, and CHARLES-STREET.

IRON FOUNDRY,

HARROW-STREET, LANT-STREET, SOUTHWARK.

W. K. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Newel and Railing Bars, Panels, Iron Coping, Hot Plates, Tank Plates, Area Gratings, Sash Weights, Fly and other Wheels, Rigsers, Pinions, Engine and Lathe Castings, Forge Backs, Furnace Bars, Kilns, Pans, and other castings, to patterns or drawings.

TO FURNACE PROPRIETORS, BUILDERS, &c.

MR. WOODCOCK, Consulting Engineer for Furnaces, Patentee of the Smoke Consumer, and other improvements, 19, BISHOPSGATE-STREET-WITHIN, London. Mr WOODCOCK having paid great attention to the general Setting and Flue System of Steam Boilers, in regard to their economical and satisfactory working, to which proper care is seldom given, begs to submit the few following testimonials, selected from a number of others, which can be seen on application:—

Horse Shoe Brewery, London, March 29, 1855.

Dear Sir—In reply to your application, we have much pleasure in stating that your Smoke Consuming Apparatus, which we have had in use now some time, under our blowing-off coppers, fully answers our purposes, and we think there can be no doubt of the success of your invention.

Yours, obediently,
Mr. Wm. Woodcock. H. MEUX and CO.

No. 6, Norfolk-street, Sheffield, April 23, 1855.

We have applied Mr. Woodcock's Smoke Consuming Apparatus to our seven-engine furnace, and are well pleased with the result. The smoke is entirely consumed; even directly after firing no smoke can be perceived. It is in every respect perfectly satisfactory to us.

JOSEPH ROGERS and SONS.

Esteemed Friend, William Woodcock,—I willingly bear testimony to the efficacy of thy "Patent Smoke Consumer." With but little attention from the engine-driver, the smoke may be satisfactorily consumed, and I am quite satisfied as to its economy.

I remain, thine respectfully,
Pro JAMES H. KING, GEO. BENSON.

York, 7 mo. 30, 1855.

I shall be glad to give any particulars to any individual, either by letter or otherwise. We are quite satisfied yours is the best we could have applied to our furnace.

Bristol Blue Works, 55, Milk-street, Leek-lane, and Callow Hill-street, Bristol, Sept. 24, 1855.

Dear Sir,—I feel it to be due to yourself to bear my testimony in favour of your plans, in the late erection of a 20-horse power steam engine boiler, and also in the application of the principle of your smoke-consuming apparatus, on my premises in this city. The result has fully justified the correctness of your plans, and the manner of your carrying them out; and I am gratified thus to signify my approval, for the satisfaction of any other firm employing steam-power. This letter is quite at your service, and I remain, dear Sir, yours respectfully,

W. Woodcock, esq. G. BREILLAT CHICK.

You will please to proceed with the other engine, to which I wish the same principles to be applied.

Boilers set, and Furnace Engineering in all its branches on reasonable terms where desired. Annual contracts for repairs, &c. are taken.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been considered.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior axe fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, &c.

THE following are the PRESENT PRICES of PATENT SASH LINE:—

No.	3	4	5	6
	4s.	5s.	6s. 3d.	7s. 6d. per gross,

At JOHN YOUNG'S, Birmingham and Wolverhampton. Agent, Factor, and General Ironmonger, 18, Blandford-street, Manchester-square, running out of Baker-street, Portman-square. Every other article equally reasonable.

212° MILNER'S HOLDFAST and FIRE-RESISTING SAFES (non-conducting and vaporizing) with all the improvements, under their Quadruple patents of 1846-51-54 and 1855, including their Gunpowder Proof Solid Lock and Door (without which no safe is secure).

THE STRONGEST, BEST, AND CHEAPEST SAFEGUARDS EXTANT.

MILNER'S PHŒNIX 212° SAFE WORKS, LIVERPOOL, the most complete and extensive in the world. Show-rooms, 6 and 8, Lord-street, Liverpool. London Depôt, 47A, Moorgate-street, City. Circulars free by post.

J. MICHIE, Engineer and Machinist, Battersea-park, Nine-elms, manufacturer of all kinds of Steam-Engines, Portable and Stationary, Sawing and Planing Machinery, Pumps, Cranes, Crabs &c.

N.B. Several high-pressure Engines for Sale.

TO LOCAL BOARDS of HEALTH, WATER COMPANIES, and OTHERS.—The Swansea Local Board of Health have FOR SALE, about 2,200 yards of 12-inch, and 150 yards of 14 and 16-inch NEW WATER PIPES, principally in 9 feet lengths, each length weighing about 7 cwt. They are good strong castings, coated inside and outside with Dr. Angus Smith's solution, and made by Messrs. Cochrane and Co Woodside Iron Works, near Dudley. The reason the Board wish to dispose of them is owing to their not being of a suitable size for their works.—Tenders to be sent in to Mr. EDWARD COUSINS, Surveyor to the Board, Guildhall, Swansea, from whom any further information respecting them may be obtained.

Swansea, Oct. 9, 1855.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE, Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and STEWART'S PATENT CAST-IRON GAS and WATER PIPES. Office, No. 7, Stea-lane, London.

IRONMONGERY.

PFEIL AND STEDALL.

THE LARGEST STOCK AT

THE LOWEST PRICE,

5 AND 6, BROAD-STREET, BLOOMSBURY.

PATENT CORRUGATED IRON.

SAWING, PLANING, and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the Kingsland, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.

R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne.
2, Strand, London.
67, Hyde-park-street, Glasgow.
37, Dale-street, Manchester.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 55, High Holborn.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.

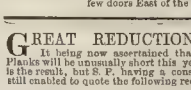
Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 13, Charles-street, Long-acre, London.

TO ARCHITECTS AND BUILDERS.

PATENT CLIMAX DOOR-SPRINGS.—The attention of architects, builders, and ironmongers is particularly directed to the above patented improvements in door-springs, being the most perfect and durable yet invented. Their power is equal to doors of any size and weight, and they are warranted to stand the wear and tear of any bank, public building, or business establishment in the kingdom.—Drawings, with full particulars, may be had from the manufacturers, WEBB and GREENWAY, Steelhouse-lane, Birmingham.

CLARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby destroying Smoke.



This invention is now in operation upon Steam-engine Furnaces of Cornish and Waggon Boilers, and upon Ovens. It is adapted to other descriptions of Furnaces, as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most perfect of the Inventions extant for subduing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.

The furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS, BROTHERS, Nine Elms, London.

Address, THE SMOKE-BURNER COMPANY, Nine Elms, London.

THOMAS EDINGTON, PURCHASER and INSPECTOR of CASTINGS on COMMISSION, 17, GORDON-STREET, Glasgow.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS. THIS IS THE ORIGINAL PATENT

for combining the most important improvements in stable-fittings, including a method of raising all others for securing the chains and halter-weights to the back of the fittings, to prevent the horse being cast in the stall. Stable Fittings of every description, enamelled or galvanized. All kinds of Stable Furniture in stock; Iron Hurdles, Gates, Fencing, &c. &c. Manufacturer of Kite's Patent Noiseless Cast-Iron Smoke-Curing Chimney Caps.—200 on Buckingham-palace.—Price Lists sent on receipt of two postage-stamps.

JAMES BARTON, Iron Founder, &c. 370, Oxford-street, a few doors East of the Pantheon.

GREAT REDUCTION of PRICES.—It being now ascertained that the importation of Pine Planks will be unusually short this year, a great advance in price is the result, but R. P. having a considerable stock on hand, is still enabled to quote the following reduced prices:—

Pine Planks, 12 ft. 3 in. by 11 in.....	from	4s. 6d. each.
Spruce Deals.....	"	2s. 9d. "
Yellow ditto.....	"	4s. 3d. "
Yellow Battens, 15 ft. 3 in. by 13. per 120.		
Honduras Mahogany, in logs	"	0s. 4½d. per ft. sup.
Ditto ditto, in boards and planks	"	0s. 6d.

Prepared Flooring, Veneers, &c. at equally low prices." A list forwarded on application.

SAMUEL PUTNEY, Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, begs to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¾ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber Deals, Oak Planks, Scantlings, Sash Sills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

PADDINGTON TIMBER-YARD.—SAWING, PLANING, and MOULDINGS.—3, Irongate Wharf, Praed-street, Paddington, and 96, St. John's-wood-terrace, St. John's-wood.—GEORGE WILLIAM FRY begs to draw attention to his large stock of SEASONED and PREPARED WOOD GOODS, at the lowest current prices. Liberal advance for cash, and facilty for immediate despatch by rail or canal, which affords every advantage to country as well as town buyers. Illustrated and priced sheets of mouldings, designs and general price lists of goods forwarded post free on application. Goods free to any part of town, including the various railway and canal stations.

N.B.—Sawing and planing for the trade.

MACHINE CARVING, JOINERY, and MOULDING WORKS, Belvidere-road, Lambeth.—The Proprietor of the above works begs respectfully to apprise the nobility, clergy, architects, builders, cabinet-makers, and trades generally requiring Carved and Moulded Works, that he is now enabled to execute any orders that may be entrusted to him with the utmost promptitude. Every description of Carved Work and Tracery, roughed out by the machines for the trade only. Pulpits, Lecterns, Reading-Desks, Screens, Altar-Rails, Tables, Chairs, &c. executed at the shortest notice. Specimens of Carved Work, suitable for various purposes, can be seen at the Works, and Estimates furnished upon application.

ACORN TIMBER WHARF.—At RICHARD MAY'S extensive Waterside Premises and Saw-mill, Canal Bridge, Old Kent-road, builders and others can be supplied with all kinds of FOREIGN TIMBER; planks, deals, and battens on sale, direct from the importers; prepared floorboards, mouldings, pine and cant deals, slating battens, laths, English oak plank, and sash-sills, at reduced prices for cash. The Monthly Price Current forwarded on application.

OAK VARNISH, 8s. 6d. per Gallon, in quantities not less than two gallons, for cash only, at C. LEFTWICH'S Lead, Glass, and Colour Warehouse, 21, Munster-street, Regent's-park.—A large quantity of PAPER-HANGINGS, CHEAP. 20s. per cwt. given for old lead.

SEASONED FLOORING.—GEO. NOKES and CO. (late Archbutt and Atkinson), beg to acquaint builders and the trade, that they have a large STOCK of DRY WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at the following reduced prices, for cash:—

¾ inch White, 13s. 6d. per square.		¾ inch Yellow, 13s. per square.	
¾ ditto 16s.	"	¾ ditto 16s. 6d.	"
1" ditto 18s.	"	1" ditto 20s.	"

Laths, 3s. per load.

Also Timber, Deals, Planks, &c. Mouldings by machinery in very great variety.

ST. PANCRAS SAW-MILLS, Cambridge-street, Old St. Pancras-road.

STAINING DEAL to IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnishes for W. NAYLOR'S Mouldings may be had at the Factory, 44, James-street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

TO BUILDERS, CARPENTERS, &c.

SAMUEL CROWHURST, JUN. begs to call the attention of Builders, Cabinet-makers, &c to his Stock of seasoned and well-assorted Timber Goods, Deals, and Mahogany in Logs, Planks, Boards, &c at prices which will be found equal if not less than any advertised. Country Builders supplied on the most liberal terms.—Timber-yard, Hanover-street, Walworth; and Francis-street, Newington, near the Church.

NOTICE.—IMPROVED WOOD MOULDING MILLS and MARBLE WORKS.—J. SIMMONS begs to acquaint his Customers and friends that in consequence of the increased trade and patronage he is continually receiving, he has found it necessary to have larger premises for the manufacture of his IMPROVED WOOD MOULDINGS, which are acknowledged by the principal large firms, architects, and others, who have used them, to be the best ever produced by machinery. J. S. in returning thanks for the liberal patronage already bestowed upon him, begs to call attention to his large stock of mouldings now on hand. Marble chimney-pieces, monuments fonts, and every description of marble and stone work also manufactured by patent machinery. NEW WORKS, No. 20, BRIDGE-TERRACE, HARROW-ROAD, PADDINGTON, about 100 yards from the Great Western Railway Bridge. New Price Lists will shortly be ready; to be had on application, or if forwarded, by enclosing six postage-stamps.—Please note the address 20, BRIDGE-TERRACE, HARROW ROAD, Paddington, near the Great Western Railway Bridge.

ANGLO-ROMANO GAS COMPANY.—At the Half-yearly General Meeting, held at the London Tavern, on the 17th inst. the following resolutions were unanimously passed:—

1st. That the report of the Gérant be received and adopted.

2nd. That a dividend upon the last half-year, at the rate of 5 per cent. per annum, be paid on and after the 24th inst.

In accordance with the foregoing resolution, the shareholders are informed that Coupons No. 3 will be payable on and after WEDNESDAY next, the 24th inst.

J. SHEPHERD, Gérant.

London Agency of the Company, 1, New Broad-street, October 17, 1855.

NORWICH UNION FIRE INSURANCE SOCIETY.
(Established 1797.)
Total Amount Insured, £1,000,000.

Insurances may be effected with this Company upon more favourable terms than with other Offices.

For prospectuses apply at the Society's Offices, Surrey-street, Norwich, and 6, Crescent, New Bridge-street, Blackfriars, London.

UNITY JOINT-STOCK MUTUAL BANKING ASSOCIATION.
APPOINTMENT OF GENERAL MANAGER.

The Court of Directors have to intimate that the final arrangements of the Bank, previously to the commencement of business, are about being concluded.

The appointment of General Manager has not yet been made. The Directors are now therefore ready to receive and consider applications from gentlemen of Practical Banking and Commercial experience, capable of undertaking the responsibilities and duties appertaining to that most important position.

The aim of the Directors is to secure the services of a first-class Manager, to whom they will be willing to give handsome terms. He must be a man of great energy, sound judgment, firmness in business, and thoroughly versed in all the necessary details incidental to the successful Management of a Bank.

It is necessary that applications should contain the name and address of the writer, together with testimonials as to experience, ability, &c. and be addressed to the Court of Directors, at the principal Offices of the Bank, Unity Buildings, 10, Cannon-street, City.—By order, HENRY LAKE, secretary.

Principal Offices, Unity Buildings, 10, Cannon-street, City, October 16, 1855.

HAWKINS'S PATENT BRUSH COMPANY.—Manufactory, 17, College-hill, Cannon-street West, London. Merchants, Artists, and Others, would do well to buy Hawkins's Patent and other Brushes; their superiority in every respect being now established by use. Prices and full particulars can be had, and samples seen, at my Offices as under, or at the Manufactory as above.—Mr. FRANCIS FORD, 9, Lawrence Pountney-hill, Cannon-street, London, Sole Agent for London and its vicinity.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 119, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

WOOD-CARVING and FRET-CUTTING. T. HEWETSON, Wood-Carver, and Fret-Cutter, 5, Hatton-garden, London, begs to inform Architects, Builders, Iron-founders, Cabinet and Pianoforte Makers, that he is prepared to execute any kind of Architectural or Ornamental work, with accuracy and despatch.—P. H. particularly solicits the attention of Ironfounders, having had many years' experience in ornamental pattern making.—Estimates furnished.

CLARK & CO.'S

NEW PATENT IRON AND WOOD REVOLVING SHUTTERS

ARE CHEAPER, MORE SECURE, MORE DURABLE, AND HAVE A BETTER APPEARANCE THAN ANY OTHERS.

BRASS AND GLASS SASH-BARS OF EVERY PATTERN, BRASS STALL-BOARD PLATES, &c. &c.—PROSPECTUSES AND ENGRAVINGS FORWARDED.

CLARK & CO. 15, GATE-STREET, LINCOLN'S-INN-FIELDS, LONDON.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE AND FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

Every other description of Blinds equally low, warranted of the best manufacture. Discount to Builders and the Trade. Fixed complete.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT.—Second Testimonial.—"March 16th, 1852.—In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately acquired it, and find it to lack the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

TO ENGINEERS, MACHINE MAKERS, AND OTHERS

METROPOLITAN BUILDINGS, AND METROPOLIS LOCAL MANAGEMENT
Now ready, price 3s. 6d. Post 4to. and 8vo.
THE NEW METROPOLITAN BUILDING ACT, with Appendices, containing 1. the Arbitration Clauses of the Companies' Clauses Consolidation Act. 2. the unrepealed Clauses of the two preceding Building Acts. 3. The Building Drainage, &c. Clauses of the Local Management Act. And 4. An Epitome of the Clauses of the latter Act, relating to the construction of Vestries and Boards. The whole arranged, with Notes and Suggestions elucidative thereof, &c. &c.
By E. W. LOWER, Architect, Surveyor to the Office of Metropolitan Buildings.
The New Building and Local Management Act may be regarded as supplemental the one to the other; and it will be observed, that the former is in the hands of the architect or builder, without the other would be like bricks in the hands of the bricklayer, without mortar. Whilst as regards the Local Management Act, it may be said that it concerns every architect, builder, house-owner and householder, in the metropolis.
WATERLOW and SONS, 49, Parliament-street, and 24 and 25, Birchin-lane.

CHUBB'S ILLUSTRATED LIST of LOCKS, FIRE-PROOF SAFES, CASH, DEED, and WRITING BOXES with their sizes, fittings, and prices, will be sent by post on receipt of two stamps.—Apply to CHUBB and SON, 57, St. Paul's-churchyard, London.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is recommended for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead it may be employed in all apartments whilst in use without any inconvenience to the inmates.
The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any alteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of, or from the imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight or cheapness, the effects of white lead if it may be employed in all apartments whilst in use without any inconvenience to the inmates.
The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE and Co.; when ground and dry, by Messrs. T. B. MORLEY and Co. and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and Co. Wholesale Agents, 93, King William-street, City; FREDERICK BRABY, Wholesale and Retail Agent, 8, Tottenham court, New road. In Manchester and Liverpool by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting shirs, warehouses, dwelling-houses, &c. in Leith, by Messrs. H. ANDERSON and CO. Edinburgh, and R. Sutherland, 3, M. H. J. BUCHAN. Dry OXIDES and PAINTS in kegs of 14, 21 and 28 lbs and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.
The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paints by contract.
For further particulars, apply to the Company's General Agency in London, 12, Manchester buildings, Westminster.

TERRA-COTTA WORKS, Blackfriars-road, London. The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA COTTA to M. H. BLANCHARD, late of Coade's Original Works, and successor to them in the manufacture of this unalterable material, has been so successfully adapted for early all the exteriors in this country, by our eminent architects and others, to the adornment of our noblest buildings, as to the only reliable material that is capable to stand the ravages of time unimpaired by fire, statues, Vases, Fountains, and Architectural Embellishments, at prices and qualities that will defy competition. A large Stock of well designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy the trade.

BLASHFIELD'S PATENT TERRA-COTTA, Manufactured at Mill-wall Isle of Dogs, Capitals, Cornices, Pavers & Parapets, Balusters, String Courses, Friezes, Bracketed Vases Statues, Chimney Shafts, and all other Architectural Ornaments moulded, finished, and burnt, in the best manner, and warranted to stand heat and frost, either in Buff or Red coloured Terra-cotta.—A great variety and large stock may be seen at BLASHFIELD'S Warehouse and Show-rooms, No. 1, Pond-street, Paddington.

MONEY ADVANCED to BUILDERS on Works in progress.—Apply to Mr. H. J. BROWN, Architect and Surveyor, 3, Norfolk-square, Hyde park.

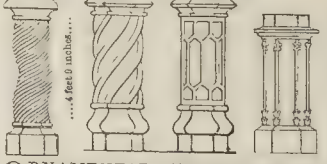
LOANS from 25*l.* to 1,000*l.* upon approved personal or other security repayable by easy instalments, extending over a period not exceeding fifty months, are read to OBTAINABLE from the BRITISH MUTUAL INVESTMENT and LOAN ASSURANCE CLASSES. Prospectuses, reports, and every information may be obtained on application at the British Mutual Life Office, 17, New Bridge-street, Blackfriars. Rules 6d. each copy 1s. per post.
CHARLES JAMES THICKE, Resident Secretary.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will scarcely mould in a year of 60 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Benjamin, Lancaster

No.	1	1¼	1½	1¾	2	2½	3	3½	3 in.
	1d.	1½d.	1s.	1s. 3d.	1s. 7½	1s. 9d.	2s.	2s. 3d.	2s. 6d.	2s. 9d.

Super-extra stout quality.

	2	2¼	2½	2¾	3 inches.
	2s.	2s. 6d.	2s. 6d.	2s. 9d.	3s. per yard.



No. 0 A cheaper hose, for low pressure for gardens and agricultural purposes, at greatly reduced prices.

1	1¼	1½	2	2½	2½ inches.
9d.	10d.	1s.	1s. 3d.	1s. 6d.	1s. 9d. per yard.

The hose is Burnett's and at an extra charge of 3d. per yard Union Joints, Branch Pipes and Jets, are also supplied.

H. DOULTON & CO.'S
TERRA-COTTA CHIMNEY-TOPS
Will withstand the action of the Weather and Sea Breezes, and are
QUITE IMPERISHABLE.
Prices not much higher than Cement.
DOULTON & CO.'S
TERRA-COTTA POTS, &c.
Erected in London upwards of 20 years since, are now as sharp and perfect as when first manufactured
Drawings on application to
H. DOULTON & CO. High-street, Lambeth.

ORNAMENTAL CHIMNEY-POTS.—More than 100 Patterns of the above mentioned Articles are manufactured in Artificial Stone by J. SEELEY, at Austin and Seeley's Artificial Stone Works, 1 to 4, Keppel-row, New road.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster, holding a large number of patents relating to the construction and reparation of the permanent way of railways, are at all times ready to communicate on the subject and to grant licenses for their use. From the facilities thus afforded to companies to negotiate for a number of inventions much trouble and a chance of litigation is avoided. The Company undertake arrangements for bringing new inventions on the subject before the public, upon terms advantageous to the proprietors of patents. Applications may be made to CHARLES MAY, F.R.S. the Manager; or to
WILLIAM HOWDEN, Secretary.

HAVERSTOCK-HILL.—To BUILDERS. TO BE LET, in the MALDEN and QUEEN'S ROAD (both main roads), some Frontages for Shops and Private Houses. All the sewers are in on the estate, roads all formed, and now making. Term, ninety-nine years. Low ground-rents. Bricks supplied at a low price and liberal cash advances.—Apply to Mr. JOHN MOORE, 86, Chalton-street, Euston-square.

OLD FORD, near Victoria-park.—FREEHOLD BUILDING LAND, with ADVANCES.—TO BE LET, several eligible sites for fourth-rate houses in this rapidly improving neighbourhood, where houses are much required, and let and sell rapidly. To respectable men, liberal advances will be made as the buildings proceed.—For plans and further particulars, apply to Mr. GEORGE CLARKSON, Surveyor, 48, Penton-street, Pentonville.

TO CABINET-MAKERS, the BOTTLING TRADE, and OTHERS.—A strong FOUR-FLOORED WAREHOUSE TO LET, by the floor or together, in the heart of London.—Apply to S. ROBERTS and CO. 65, Shoreditch.

LUDGATE-HILL.—TO BE LET, by the Worshipful Company of Cutlers on repairing or building leases, a large PLOT on the BELLE SAUVAGE ESTATE, consisting of several houses, stabling, and vacant ground, eligible for warehouses, manufactories, public or private offices.—For plans and for particulars apply to Messrs. BEAUMONT and THOMPSON, Solicitors, 19, Lincoln's-inn fields; or to Messrs. RICHARD TRESS and CHAMBERS, Architects, 27, Queen-street, City.
JAMES BEAUMONT, Clerk.

ERITH and ABBEY WOOD.—LAND TO BE LET, on Building Leases, with advances, in large or small Plots, situate upon an eminence commanding extensive and beautiful views, and known as Lesney Park.—Apply to Messrs. RICHARD TRESS and CHAMBERS, Architects, 27, Queen-street, City.

STRAND.—To PRINTERS and PUBLISHERS. TO BE LET, on a building lease, PREMISES No. 17, Wych-street 50 feet deep.—For particulars, apply to Mr. W. GRIFFITH, Architect, 9, St. John's-square, Clerkenwell; or to Messrs. PRESTON and SON, House Agents, 1 and 10, Wych-street, Strand.

FREEHOLD BUILDING LAND TO BE LET, on Building Lease for ninety-nine years, at 1s. 6d. per foot frontage, 80 feet deep, for small fourth-rate houses, in large or small plots, and on very advantageous terms, close to Forest-gate Station, and not far from the Stratford Station, Essex, on the Eastern Counties Railway, four miles from the City. Leases granted at once. No law charges or surveyor's fees. Advances if required, after due progress in buildings.—Apply to Mr. PARSONS, 7, Bull's-court, Old Broad-street, City.

BUILDING LAND TO BE LET or SOLD, for small houses, at Battersea.—Apply to Mr. W. PEWTNER, Architect, 2, Fenchurch-street.

BUILDING LAND TO LET, at Peckham. Ground rents low. Liberal advances if required.—Apply to Mr. W. PEWTNER, Architect, 2, Fenchurch-street.

TO BUILDERS, CARPENTERS, AND OTHERS.
TO BE LET, with immediate possession, most desirable PREMISES, situate in a village with a ten miles circuit from the metropole, established in the above line, upwards of twenty years, with a good Dwelling-house attached.—For terms apply to Mr. BRAY, Jun. Estate Agent, 16A, King's-road, Bedford-row.

BUILDING LAND TO BE LET, at

HALLSVILLE	Term 1,000 years,	for small cottages.
CANNING TOWN	" 1,000 "	for small cottages.
NORWOOD	" 1,000 "	for villa residences.
STRATFORD	" 130 "	for small cottages.
POPLAR	" 98 "	for fourth-rate houses.

Advances of 50 to 100*l.* at 5 per cent. on each cottage.
Apply to Mr. Wm. ELLISON, Architect, Stansby-road, Limehouse.

TO BE LET, on a building lease, for a term of 99 years, from Midsummer, 1851, a most eligible piece of GROUND, situate on a most desirable property at Brixton-hill. It is sufficient for twelve semi detached cottages of six rooms each. There are already forty-two built, and these will complete the plan. Separate leases will be granted for each pair, if desired. Ground rent 6*l.* 10*s.* per pair.—For further particulars apply to Mr. CHARLES WRIGHT, Archbishop-road, Somer's road, Brixton-hill.

FREEHOLD BUILDING LAND.—WANTED to PURCHASE, about HALF-AN-ACRE of LAND, in the vicinity of Kensington, Bayswater, or Hammersmith. It must be adapted for building purposes.—Apply, stating terms and particulars, to Mr. CHARLES LAWS, Architect, 12, Doughty-street, Mecklenburgh square.

TO BUILDERS
FREEHOLD BUILDING LAND TO BE LET or SOLD, at Harrow, Upper Holloway, and Tulse-hill. Liberal advances made.—For plans and particulars, apply to Mr. CHARLES LAWS, Architect, 12, Doughty-street, Mecklenburgh-square.

TO BE DISPOSED OF, the BUSINESS, TOOLS, and STOCK-IN-TRADE of a JOBBING BUILDER, in the neighbourhood of Bedford-square and Tottenham-court-road.—Address, H. B. Mr. Cook, 13, Castle street, Berners-street.

TO CARPENTERS and PACKING-CASE MAKERS.—An old-established BUSINESS TO BE DISPOSED OF.—Apply to W. KING, 8, Woodstock-street, Oxford-street.

TO BUILDERS.—TO BE SOLD, a BUSINESS as above, near the East End of London, together with the Implements, &c. Also, the unexpired lease of twenty years for Three Houses, producing a rental of 42*l.* per annum. Premium required 30*l.* None but principals treated with.—Direct to G. A. R. Office of "The Builder."

SEVERAL first-rate CARCASES for SALE, on peculiarly advantageous terms, and most eligibly situate. The whole of the purchase-money may remain on mortgage, and advances will be made for completion if required.—Apply to Mr. H. J. BROWN, Architect and Surveyor, No. 3, London-street, Norfolk-square, Hyde-park.

STAIRCASE WANTED.—WANTED, an old CARVED OAK STAIRCASE, in good condition, for a gentleman's house in the country; the size is 16 feet by 10 feet 6 inches.—Particulars to be addressed J. C. W. Office of "The Builder."

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country at extensive assortment of specimens and patterns commencing at 1s. per foot super. together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

The Builder.

Vol. XIII.—No. 663.

THE committee appointed by the vestry of St. James's, Westminster, to investigate the causes (arising out of the sanitary condition of the parish) of the dreadful outbreak of cholera in the districts of Golden-square and Berwick-street, which occurred in the autumn of last year, have published their report, together with reports from Dr. Snow and the Rev. H. Whitehead.* It is arranged under four heads—1st. History of the outbreak; 2nd. Circumstances attending the outbreak; 3rd. Hypotheses concerning it; and 4th. Recommendations of the committee to the parochial authorities. The inquiries appear to have been made in the most careful manner, and we cannot allow the report to pass by without bringing it before our readers, and pointing out something of what it teaches, for general advantage. More than a year has passed since that fearful visitation, but the scenes we witnessed in the district at the time come as freshly before us as if it had occurred but yesterday,—closed shops, anxious woe-begone faces, and death everywhere. On the 2nd of September, 127 persons died: and in the whole 700 persons were there carried off. In Broad-street, containing forty-nine houses, only twelve houses escaped without a death.

Abounding in cesspools, ill-drained, and poorly supplied with water, the liability of the district to the inroads of the epidemic was evident, and we had ourselves long before drawn attention to this probability, and given sketches illustrative of its miserable condition.

After referring briefly to the conditions affecting the metropolis generally, the committee proceed to search for some peculiar and local conditions which may help to explain why the mortality in their district was so disproportioned to that in the rest of the metropolis. To the notion that the pest-field, used in the time of the Great Plague as a cemetery, produced the attack, they rightly attach no importance. They show that streets and courts are so built as to impede ventilation: that "in calm weather the stagnation of the street atmosphere must be almost complete:" that parts of the district are densely overcrowded (in one of the smaller streets fifty-four persons were living in one house): that cesspools existed in large numbers, and that the drains and traps were of faulty construction. Of the escape of foul and noxious vapours, they have no doubt, and to the existence of cowsheds, grease-boiling houses, and slaughter-houses, they could not shut their eyes. "One large establishment," says the reporter, "drains into the short piece of sewer at the lower end of Marshall-street, near Silver-street. There is no surface drainage above, and the house-drainage must be insufficient to keep the sewer clear from obstruction. Direct evidence is on record of the accumulation, during last August, of the blood, offal, and ordure of animals in the short piece of this sewer, as far as its entrance into the Silver-street sewer, and even beyond this point. The presence of such accumulations must hold up the house drainage as far as the corner of Broad-street. There is no gully-hole along this part of the sewer, and no ventilator at the top. It forms, therefore, a closed and underground retort, 200 feet long, its inclined floor being partly choked with animal matter and refuse (the most prone of all to dangerous putridity), partly covered with the closet drainage from occupied houses, and empty only at its upper end. Its beak dips down into Silver-street, into which the products of its distillation must slowly fall."

In this way of course, during the cholera outbreak, the local atmosphere might be seriously tainted; and they are disposed to think that probably no such other example exists throughout the metropolis, of large slaughtering-premises draining into a short and closed sewer, with insufficient head-water to carry away the filth. Who knows, however, what horrors would be disclosed were a complete investigation made. As to the public water-supply, they attribute no influence to it in increasing cholera, but they mention with proper emphasis, that "the condition of the water-butts and cisterns, as stated in the visitors' inquiry lists, must have been exceedingly bad. Particular instances the committee forbear to mention; but enough was revealed to make them hope for the speedy abolition of the cistern and for the consummation of the long-advocated plan of a constant supply. Often these butts and cisterns are without covers; and, very frequently, owing to the smallness of the back yards, they are in close proximity to accumulations of dirt."

The state of the receptacles, and we will add, though the committee do not, the absence of any supply at all in places, drove many to the well-water of the district for drinking purposes. "I feel bound to say," writes Mr. Whitehead, that, as far as Broad-street is concerned, there is this connection between defective sanitary arrangements and the cholera, that a house ill-regulated in other respects is but little likely to have its receptacles for the company's water well attended to. Without pointing, as I could, to individual instances of sad and culpable neglect, I shall content myself with saying that I well know that many of the unfortunate deceased were literally driven to resort to the pump through mistrust of the cistern. A constant supply from the main, with total abolition of cisterns, is an imperative necessity."

And this brings us to the only distinct assertion with reference to the cause of the visitation which the committee make, namely, that "the sudden, severe, and concentrated outbreak beginning on August 31st and lasting for the few early days of September, was in some manner attributable to the use of the impure water of the well in Broad-street."

In this conclusion the committee find support from the gradually accumulating evidence collected in other localities, as to the important influence of contaminated water in increasing cholera, especially in the districts of the metropolis lying south of the Thames, wherein, as stated by the Registrar-General,—"the balance of mortality is heaviest in every district and in every week against the impure water, to an extent that leaves little room for doubt on the mind."

It was Dr. Snow who first showed that a relation existed between the Broad-street well and the cholera outbreak. Our readers may remember the exposition of his book which appeared in our pages, containing some of the evidence on which the assertion rested. The Rev. Henry Whitehead, entertaining at first adverse views, has ended his special investigation of Broad-street by a remarkable confirmation of Dr. Snow's result. "It is shown by Dr. Snow, 1st. That the outbreak, properly so called, was confined to the area about the Broad-street pump. 2nd. That sixty-one out of seventy-three persons who died during the first two days had been accustomed to drink the pump-water either constantly or occasionally. 3rd. That the water was used in various other ways, and might so have been taken in cases where its use in the ordinary way could not be distinctly traced. 4th. That in the Workhouse, where the well water was not used, only five deaths occurred, whereas fifty would have been a ratio proportionate to that of the neighbourhood around. 5th. That in a factory employing 200 people, where the water was drunk daily, eighteen people died. 6th. That seventy men, employed at the Brewery, in Broad-street, never drank the water, and escaped cholera. 7th. That in a number of individual instances which were particularly investigated, the drinking of the water was followed by cholera: in one case, a lady living quite away from the district, who had the water sent out to her, died after drinking it: her niece also died under the same circumstances. 8th. That at any point decidedly nearer to another pump, the mortality from cholera, as a rule, ceased; and that, in an inquiry extending over forty-eight fatal attacks which took place nearer to another pump, many apparent exceptions were found to be cases of death in persons who really had a preference to the more distant Broad-street water. 9th. That in a particular street, containing fourteen houses, the only four which escaped without a death were those in which the Broad-street water was never drunk. 10th. That this water was employed for drinking purposes only, and was used cold; a statement which, we may so far anticipate as to say, is confirmed by the experience of Mr. Whitehead, who met with but a single exception to this rule. From all these several facts Dr. Snow is of opinion that, although the early cases of cholera and the later cases were due to some other mode of diffusion, the outbreak between the 31st August and the 10th September was attributable to the well-water as the medium of dissemination of the cholera poison. He believes moreover that the well-water must have been not merely generally contaminated by cesspool drainage, but specially with the evacuations of a cholera patient."

Without entering into the last part of Dr. Snow's theory, which is of the utmost importance, and demands the most careful investigation on the part of the medical profession, we would say that the evidence of connection between the well-water and the loss of life seems so conclusive, as scarcely to admit a doubt; and the question that at once arises is, what was the position of the well and the condition of the water? On this point we have the report of a practical man, and well-known inhabitant of the parish, Mr. Jeht. York.

What do we find? the well adjoins the vault of No. 40, Broad-street: through this vault proceeded the main drain of the house, constructed on the old plan of a flat bottom, 12 inches wide, with brick sides, about 12 inches high, and covered with old stone. There was a deposit of soil about 2 inches thick, in the drain, and on clearing this away, the whole was found to be in the condition of a sieve, through which the house-drainage must have percolated a considerable time. In the front area there was a common open convenience, with a cesspool 3 feet deep, *intended for a trap*, but misconstructed, and fully charged with soil. "Upon removing the soil, the brickwork of the cesspool was found to be in the same decayed condition as the drain, and which may be better comprehended by stating that the bricks were easily lifted from their beds without any the least force; so that any fluid could readily pass through the work, or as was the case when first opened, over the top course of bricks of the trap into the earth, or made ground immediately under and adjoining the end wall eastward, this surface-drainage being caused by the accumulation of soil in, and the misconstruction of, the cesspool, which was intended to prevent effluvia and vermin coming into the house from the main sewer in the street, but which, in fact, it facilitated rather than prevented." And its effect was to force the deleterious fluid-matter into the parish well adjoining, by preventing it

* Churchhill, New Burlington-street.

from running direct into the current of the house-drain. To place the matter beyond a doubt, Mr. York had two spaces of the brick steining, 2 feet square each, taken out, and the ground dug out between the cesspool and the well, when its black, saturated, and swampy condition, clearly demonstrated the fact.

Without reference to the assertion that matter from a choleraic patient who early died in the house, thus found its way into the well, or to the theory which this would materially strengthen, we have here a state of things prejudicial to health in the highest degree, and which, nevertheless, may be paralleled, we do not hesitate to say, in hundreds of places in the metropolis. Shall we not take warning from past events?

What has been done in the districts of which we have been speaking? At the time of the late attack, we expressed a fear that, notwithstanding large main sewers had been made through the streets, the houses were imperfectly drained, and that in many instances the cesspools still remained, disguised by pans. This belief was contradicted in some quarters, but since then we have learnt with certainty that a very small proportion of the houses were properly joined to the sewer at the time of its formation. Even in Broad-street it would appear that little has since been done. Some of the inhabitants say—"Oh, there will be no cholera this year; and it is ten to one against it visiting us here when it does come." Have people who reason in this way forgotten the frequent visitations of the disease to Newcastle-on-Tyne? In St. Anne's-place, and St. Anne's-court, the open cesspools are still to be seen; in the court, so far as we could learn, no change has been made; so that here, in spite of the late numerous deaths, we have all the materials for a fresh epidemic.

Early in our inquiry we described the houses in and about New-square, Berwick-street, as being in a miserable condition, particularly the back parts. In some the water-butts were in deep cellars, close to the undrained cesspool. Some of the houses have been partially repaired, but the worst conditions remain. In a passage at the south-west corner, the house which was formerly so ill supplied with water that the people at the little chandler's shop had hit upon the ingenious device of smuggling in a supply from the pipe which passed through the place, is in a shocking state, the pavement broken: the drainage, we believe, is in the same condition as formerly, and this passes under two inhabited cellars, where daylight is barely visible. In this house, said a person living in it, nine persons died of cholera, that is, "they did not all die here; some were taken to the hospital, and never came back, but those, together with the deaths in the house, made nine."

While our assistant was making some notes in this place a few days ago, a fierce detachment of Irishmen rushed out, and accosted him. The leader, with many angry gesticulations and numerous oaths, said—"I'll have no writing down in my place—I'll have no writing down in my place—not a divil amongst you shall write anything down here." Reasoning with them was useless. The overcrowding appears to increase, and go where you will you hear complaints as to the difficulty of finding lodgings for "such as they." This is partly the secret of the violence to which we have referred; a shelter for the very poor in London has become so valuable, that they suspect us all of endeavouring to rob them of it. Some provision must be made for them, and improvements effected for others.

The Committee of Inquiry in the Report we have noticed recommend,—the building of model lodging-houses; the abolishment of slaughter-houses, grease-boiling houses, and other noisome works, from this and all other densely-inhabited districts; the necessity of giving attention to the state of the sewers; that the surface-wells should be closed, stand-pipes being erected in lieu, and the propriety of sinking Artesian wells for the supply of the parish discussed; that cisterns should be abolished, and the method of constant supply introduced; that a medical inspector be appointed, and a code of sanitary instructions forthwith distributed. They omit, however, one of the most important steps required, and that is, the immediate abandonment and clearing away of all cesspools—not the disguise of them, but their complete removal. In the cesspools we may find one of the strongest reasons why 26,000 persons die every year in our metropolis before their time.

Just think over this, good reader. *Twenty-six thousand persons!*

ROSE WINDOWS, ASSISI.

The accompanying sketches of two elegant rose windows are taken from the west façade of the duomo of Assisi: they light the north and south aisles.

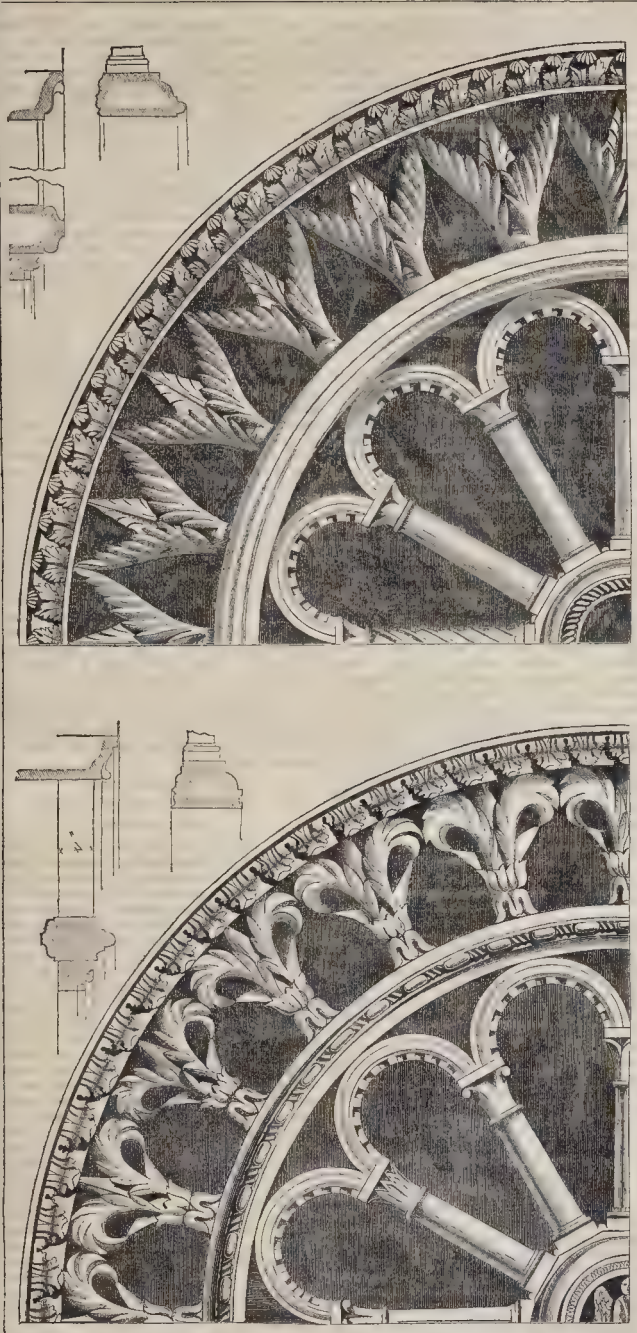
The church is dedicated to Saint Rufino, and is a very good specimen of Early Romanesque work, of a comparatively plain character. The three doors are more especially ornamented, the central one with mosaic (no longer existing) and sculptured foliage, having a marked Greek character, which runs round the arch, together with an attached circular shaft, curiously carved with quaint grotesque animals and figures.

The jambs of the side doors have a series of circular hollows, filled in with rosettes, animals, crosses, the symbols of the Evangelists, &c.; and on each side, resting on the paving, are lions and winged animals of great size, projecting rectangularly from the jambs. The door openings are made square, and the semicircular space or tympanum over them is filled in with sculpture; in the centre door (which is considerably larger than the others) is represented the Almighty enthroned, a priest on the right side, and the Virgin and Child on the left: in the side doors are lions and peacocks drinking out of a vase. The windows are placed centrally over these doors, but are separated by an arcade of detached shafts, having circular arches springing from their caps, while their bases rest on a slightly projecting string course, profusely carved with quaint nondescript species of animals: under the string course, and supporting it, are a series of grotesque heads, human and bestial.

The lower portion of the façade is remarkable from the kind of panelling introduced, which arises from Bolection mouldings (forming part of jambs and arch mould of doors), which divide the façade horizontally and vertically, carried up just below the string course before described, and connected by small semicircular arches. The windows illustrated are about 8 feet 4 inches in the clear in diameter, and the glass is fixed behind in the thickness of the wall. The central window is also circular, a sketch of which will be given on a future occasion. The stonework is 4 inches thick; the open boss mouldings and the moulded ribs project to the plane of the wall face; the foliage and ornamentation are very well executed and preserved, and the windows have a very good effect. There is no rough stone arch around the windows, the wall being of well-dressed plain-faced freestone, and the joints abut against the curve of the external enriched moulding. The care taken in their construction, from the weight of the superincumbent mass of walling and (for that period) a highly pitched gable above it considered with relation to the lightness of the stonework and the elegance of the forms, shows great power and skill in the architects of that early period. The nave and aisles are of modern Roman work (inside), the apse alone on the exterior remaining as originally built, with the exception of two large windows, which have been inserted. To the north aisle is attached a high massive tower, the lower part of which has been built against: the upper part is of the usual Romanesque character, divided by string courses, slightly projected buttresses, connected with arches, corbel table, &c. The belfry has two windows on each side, with circular arches springing from cap of central column. Above, it has been modernized. On each side of the windows are animals, very grotesquely carved, descending as it were down the walls, and projecting very boldly from their face. The whole façade, indeed, is well worthy of examination, the doors being very original and curious, and the windows beautiful and characteristic.

S. B. Fripp.

THE RECENT HISTORY OF ARCHITECTURE.*



FRANCE, ENGLAND, AND GERMANY.

Whilst the spirit of Greek revivalism was growing in England, it appears to have declined in France. The architect who had chiefly followed that manner was dead, and though the Palladian school had its votaries, the works founded on the Roman manner were sufficiently important to stamp the character of the epoch. Besides the works already alluded to as commenced at the Louvre in 1805, and the arch of the Tuileries in 1806, we should not omit to mention the church of the Madeleine, which had been commenced, as to its present form, in 1804. The Madeleine was not completed till 1836. Vignon, Huvé, and others, were the architects. The interior displays much originality. The exterior reproduces the architecture of the Roman temple—having a peristyle of fifty-two Corinthian columns, eight at each end,—with this important difference, however, that the columns are built up of such small stones, that we are reminded of the columns in brickwork, rather than of those of the more magnificent temples. The gigantic monument, the Arc de l'Etoile, as it exists, is less marked by Roman taste than is the elaborately-ornamented arch of the Tuileries. The Arc de l'Etoile also was commenced in 1806, and, like the church, was completed only in 1836. Chalgrin was the first architect; Debret conducted the completion. It occupies an area of 144 feet by 70 feet, and reaches to 147 feet in height. Its one large arch is 46 feet wide and 98 feet in height; and this is intersected by a transverse arch, 26 feet wide and 59 feet in height.

In Germany, there is necessarily little to record during the time of the war, in actual execution of public works. The Brandenburgh Gate, which some claim as an adaptation, and others stigmatise as a copy, of the Propylæa, commenced in 1789, would seem to indicate a state of taste not dissimilar to that which was growing in England. But, in the tendency of popular views which it will be necessary for us to notice shortly, and in the gradual preparation which the minds of one or two architects of future celebrity were undergoing, the vigorous growth of modern German art had even then commenced.

Returning to our own country, the regency, which began in 1811, was marked by the commencement of several important works besides Drury-lane Theatre, and even before the termination of the war. In the year mentioned, Vauxhall Bridge, and one then called Strand (afterwards Waterloo) Bridge, were begun; and on the expiration of the Duke of Portland's lease of the Marylebone-fields, the Regent's Park was commenced, but it is remarked upon in the course of the next year as not promising speedy completion. In 1812, designs for a new Custom-house by David Laing were considered, and approved of; and the new Bethlehem Hospital, by James Lewis, was commenced. Amongst buildings completed, we find mention of Surgeon's College, by Dance and Lewis, since enlarged and otherwise somewhat modified by the present Sir Charles Barry. The next year, 1813, in which died James Wyatt, is memorable in the history of Europe as the date of the battle of Leipzig. The new Custom-house was commenced on August 1st, on a site a little to the west of the old building. The money expended in land and premises was 41,790*l.*; and the original estimate for foundations and superstructure was 228,000*l.* The lowest tender for works, exclusive of foundations, was for 165,000*l.* Even these large amounts, however, were greatly exceeded, from first to last, through the

* See p. 469, *ante*.

WINDOWS IN THE CHURCH OF SAN RUFINO, ASSISI.

disasfrous result in the case of the works. On the site were discovered three distinct lines of old wooden embankments, within the actual line of wharfs; so that the ground had been part of the bed of the Thames. The architect, therefore, observed what were thought to be extraordinary precautions. Piles, 3 feet apart, were driven over the whole area. They were about 30 feet in length, and 9 inches diameter; and were of beech, as a wood esteemed peculiarly durable under water. They were used green, with the bark on. Sleepers and planking, with spaces filled in with brickwork, followed; and round the footings a tier of oak bond, 12 inches by 9 inches, "dovetailed, halved, and corked," was laid, arches being then omitted. These particulars and others may be found in the architect's publication of his works. The structure progressed during the next few years, the old building being meanwhile destroyed by fire; and the new building was opened in 1817 with every appearance of stability. However, in 1825, the foundations failed, and the result was a most extensive underpinning, carried out under the direction of Sir Robert Smirke. The use of planking to foundations was far too common about the commencement of our century. There must have been some general misconception as to the liability of timber to decay in such situations. But we have found walls of about this date built even without *footings*; and such cases are by no means uncommon about the neighbourhood of Grosvenor-square. The reintroduction of concrete was a very great advantage; and the principle adopted in the Houses of Parliament, in that respect affords a marked contrast to the practice of twenty to thirty years earlier. The exterior of Laing's building presented a centre with arch-headed windows, whilst the wings displayed an order. Thus, though one part was not without good character as to "breadth"—being indeed more satisfactory than what there is at present—the whole was rather discordant. In the present arrangement, the character of the wings is preserved—by a portico ranging with the original order. In the year already named (1813), as we gather, Regent-street began to be built, pursuant to the Act of Parliament of the same year; but we have failed to discover note of any important work completed till some years later. In the same year, one of the latest of the Palladian churches was commenced, namely, Marylebone Church, by Mr. T. Hardwick. Having been originally designed for a chapel-of-ease, and subsequently altered extensively when it was determined to make it the parish church, the architect was hardly placed in an advantageous position. It is, however, a meritorious work. The figures at the top of the tower are well introduced. The interior arrangements are in striking contrast to those which are insisted upon in the present day: for example, there are two tiers of galleries.—The winter of the year 1813-14, we may remark, was that in which there was a fair on the Thames.

In 1814, the allied sovereigns were in London, and there was a general thanksgiving for what was anticipated would be the permanent ratification of peace. Projects of all kinds were discussed within the peaceful haven of Carlton House, and the Prussian monarch despatched to the architect Schinkel, then rising into fame, a command to make designs for a grand cathedral, to commemorate the pacification of Europe. But the time for either commemorative or useful public works had hardly yet arrived, and with the exception of the commencement of Southwark Bridge, the enthusiasm of 1814 left little more than a "pagoda" in St. James's Park, and the rickety "Chinese bridge," of which the London world has lately heard something. During the year 1815, however, there were some important undertakings. The Mint, on Tower-hill, by Sir Robert Smirke, was erected, and the London Institution, by the late W. McIntosh Brooks, was commenced in Finsbury-circus, which was formed on the removal of old Bethlehem Hospital. In these buildings, the English version of pseudo-Greek architecture is seen fully established. The new Bethlehem Hospital was completed, having cost about 100,000*l.*; and a new Post-office was projected. The Hospital is now varied in character by the altered dome. The Burlington-arcade, we believe, belongs to the same date, and should be instanced as an exceptional effort in style, and one of some comparative merit. The architect's name we have not met with. Some alterations in the front of Burlington House at this date, may be mentioned: they consisted in the raising the Venetian windows to the level of the others. The whole of the house, except the front and one or two rooms, was at the same date rebuilt. Sir John Soane's manner at this date, is exemplified

by his tomb—to which we have before referred. As regards general projects for public works in 1815, things were beginning to settle a little, when Europe was startled by news of Buonaparte's return from Elba. The battle of Waterloo at length effected the final pacification of Europe, and left free scope for the diviner arts of Pallas and of Peace. Then,—"Divina Palladis arte ædificant."

Without we could place side by side, the London of 1815 with the London of one out of some few years later, it would be difficult to realise how great was the change to be credited to the Peace. The grand thoroughfare of the Strand, narrow from end to end,—the western portion and Charing-cross of course unimproved; before Regent-street was practicable, the horrors of the middle passage of Swallow-street; the western entrance of London at Hyde-park-corner adorned by a simple toll-gate; Regent's-park in embryo; architecture in Pall-mall unborn; Old London-bridge mean and dangerous; City improvements wanting; Belgravia and Tyburnia undreamt of; and the navigation and commerce of London carried on with a mere tithe of its present appliances;—these would be a few of the items in the account. Here let us pause to examine what was the preparation that had been making elsewhere for the great works which followed.

It is remarkable in how few years, countries which had been apparently prostrated, began to prefer a claim to position in the world of art. Architecture, indeed, had necessarily more obstacles than other branches of art, and in the very year that Schinkel had returned from Italy, 1805, the Prussians were defeated in the battle of Jena, and Berlin was opened to the conqueror; so that, though the great architect soon extended his reputation, little demand could be made upon his talents till the year 1814, or later.

In Germany, during a long course of years, little had been effected in architecture by native talent. Great at one time in mediæval art; giving to Italy, as it would seem, a style of architecture, and the practice of oil-painting; Germany, during the period of the chief influence of the Cinque Cento school, presented in architecture a reflection of the styles of the neighbouring countries—generally through the hands of Italian and French architects. Carlo Fontana had been employed at Fulda and Vienna; Guarini on the church at Prague; and Scammozzi on the cathedral at Salzburg. Andrea Pozzo was architect of several churches at Vienna, and died there. Amongst French architects, Blondel, towards the end of the seventeenth century, was much employed, and from that time, French fashions prevailed. Mr. Gwilt remarks* that "it is a curious fact, that at "the period when Germany was borrowing architects" from France and Italy, "England could boast of architects whose fame still resounds through Europe." It is true, that Mr. Gwilt has omitted to allow for the particular influence of the order of Jesuits, in some of the instances to which he refers. However, this had not been always the state of art in Germany. To the Romanesque churches, it is only necessary to allude. The Gothic style was invented probably in Germany, and that it reached northern Italy from this direction, appears probable from the names of German architects. Such was the reputation of the Germans at one time, that architects of Cologne were engaged to build the cathedral at Burgos, in Spain. The employment of Germans on the original plan of Milan Cathedral, has been lately questioned: still, there were Gothic buildings in Italy by German architects in the thirteenth century. But we are approaching to a glorious epoch for the German race. This commenced with a *revival* of the old Teutonic spirit; and sought expression through the medium of all the arts, though chiefly through the art of painting. In a view of the history of architecture, we have thought fit to look at the progress of painting during one period, in France. It is even more necessary now, not to disregard the latter art. For, with the Germans, the several branches of art have been once more brought into alliance, as parts of that comprehensive field of effort, wherein is the only true expression of the scope and capabilities of the grand united art—architecture.

Haydon, who argued that nothing good had come of the very means taken to nourish the lamp of art, had grounds for his opinion, from the results in many cases where academies had been established. These institutions, which were common after the time of the Caracci, were copied in Germany. Just as the Accademia della Crusca preserves the purity of Tuscan Italian; but with some cost, as regards the nervous life and originality derivable from foreign sources—(thought itself being fostered by copiousness *as well as* precision of *language*)—so the academies of art succeeded in repressing effort, unless where they provoked extravagance in opposition. Allegorical and mythological subjects, such as were common in Italy, were the staple for pictorial art,—except where any different influence might be derived from the other direction,—that is, from the school of David.

At this juncture, some time before the end of the war, a few very young students dared to question the teaching of the Academy of Vienna. Devoting themselves to subjects of the highest order, they believed in the possibility of an inspiration by the very dignity of a subject. They therefore did not seek even such advantage as they might have acquired from academic precept; whilst it seems that they did not correct the teaching of the models they chose, by that close observation of nature which characterizes the corresponding English school. To the early masters, however, German and Italian, Overbeck, Vogel, and others resorted. To oppose the error that prevailed, they proposed to establish a revival of the characteristics of the predecessors of Raffaelle. Their expulsion from the Academy was the consequence. Overbeck resorted to Rome, where shortly afterwards were found Cornelius, Schadow, and Veit. These men became the founders of the modern German schools of painting—those of Munich and Düsseldorf. The latter is that which is to be viewed as the chief school of *oil* painting. It was otherwise remarkable for its minute and too reproductive imitation of nature. Schadow eventually became director of the Düsseldorf academy; Vogel, of that of Dresden; and Veit, of the Stadel Institution at Frankfort. Meanwhile, the revival had commenced of that vehicle for pictorial art—fresco,—which most concerns us as architects.

Overbeck, Cornelius, and the others reached Rome when about twenty years of age. They applied themselves to their art with extraordinary energy. The simplicity and piety which they found in the early masters, became reflected in their works, and indeed in their lives. Somewhere about this time, it was that Sulpice Boisserée, after a period of great neglect of the Cathedral of Cologne, undertook those careful drawings of the building which were subsequently published, and of which important use was made in the restoration. The brothers Boisserée were devoted to mediæval art. The Boisserée collection of German and Italian masters was formed; a public taste for early art grew up, and was fostered by Goethe, the Schlegels, and the *literati* of the time. The circumstances inducing the change referred to, corresponded very much with those which are within recollection in our own country—for which, indeed, we may already have found parallels in the course of our history. A corrective to an insipid state of art had become necessary; and in applying this, an opposite extreme was fallen into. The language of allegory was exchanged for character marked by simplicity and earnestness, but in which the stiffness of treatment was not more closely allied to nature; whilst for mythology was substituted rather, religious mysticism. These peculiarities, however, coupled with the novelty, were sufficient to secure for the works great attention. Eventually, in 1814, Overbeck, and ten others who belonged to the Lutheran Church, consummated their adherence to their tenets in art, by becoming Roman Catholics. One who saw them at the Café Greco from time to time in 1814, describes Overbeck to us as a pale ascetic, with long, lank hair,—keeping himself apart from the throng, and usually occupied in telling his beads. But before the date of these conversions, there had been a revival of the vehicle of painting to which we have referred, and which seemed most accordant with the simplicity of treatment that was growing into fashion.

Such attributes of the art of painting as are mainly characteristic of the English school, are those to which the vehicle, oil, lends itself readily. These were subordinate in the works of the section of German artists with which we are now concerned. Outline received the greatest share of their attention; chiaro-scuro and colour were comparatively neglected. In fresco, the exigences of the process are necessarily less favourable to the two last-named elements,—independent of the fact that masses of low half-light and deep shade have been seldom used successfully on large surfaces, and that they "are especially ill-adapted for fresco, on account of its tendency to reflect light only from its surface."* Fresco, again, has but a limited scale of colour, so that the varied effects are impossible which can be produced in oil-painting. At the same time, it affords ample scope for the attainment of a grand style of art, in the decoration of large surfaces—for which it is especially well fitted by its freedom from the reflection, which in such cases becomes a serious disadvantage to the distinctness of the subject; whilst its very restrictions seem to promote, whilst they demand, the greatest possible attention to the expression of the design and to the drawing. The course of the Germans was thus directed to that branch of art which in their hands, through the medium of fresco and encaustic painting, eventually contributed so much to modern German architecture. Cornelius, like Michelangelo before him, avoided oil-painting altogether. The first commissions for works in fresco were given, it is said, by M. Bartholdi, the Prussian consul at Rome. A saloon was painted for him in 1809, by Cornelius, Overbeck, and Veit. Canova, the most worthy exemplifier of the value of *classical* models, was also amongst the early patrons of the school of German fresco painters.†

* "Elements of Architectural Criticism."

* "It may at first appear that all pictures reflect light from their mere surface, but this is not, strictly speaking, the case. One great element of oil-painting is its power to reflect light from an internal surface, through semi-opaque substances more or less discoloured."—C. L. Eastlake on "Styles and Methods of Painting suited to the Decoration of Public Buildings," in Fifth Report of the Commissioners on the Fine Arts: Appendix.

† To be continued.

THE BAR GATE, SOUTHAMPTON.

TOWN DEFENCES.

The room over the Bar Gate, at the northern entrance of Southampton, having been found too small for the increasing population of the town, the idea occurred to the mayor, Mr. Andrews, that it was capable of enlargement, and the council approving of his suggestion, the task was confided to me in 1852, of carrying the improvement into effect. In its then state it could be seen from the exterior that the old Norman gate had been enlarged in the fourteenth century, by the addition of a semi-octagon, fitting on to the two round towers of the old fortress, in its northern face. In the interior, at some subsequent date, an oblong room had been partitioned off in the old portion of the structure to form a town-hall, and a small room obtained for the use of the magistrates in the fourteenth century addition. On removing the partitions put up to form these rooms, it was found that the architect who made the additions in the fourteenth century had left the Norman structure complete, and I was thus enabled to make accurate drawings of its original state. The south side of the building could easily be restored: at present it stands covered with cement, and disguised in the carpenter's Gothic of forty years' since. The mullions of the windows are gone, but the jambs remain, and the inner arched heads were discovered when the lath and plaster improvement was removed.

The style of the Norman Bar Gate shows it to have been erected late in the twelfth century. The style of the addition points to the latter part of the fourteenth century. Between these two periods the greater portion of the fortresses in this country were erected. They owed their

rection chiefly to the development of the feudal ystem, by which a people became split up into nall communities and little sovereignties, by hich general nationality became extinct, and entral government all but impossible. During ie continuance of this system there was a onstant succession of small fightings between val barons, or lords and vassals, with occaonal variations when municipal bodies in their rtified towns set at defiance some over rapaous patron in the neighbourhood.

When the feudal system fell into decay foreign ars commenced—no longer between lord and assal, but nation against nation, government gainst government. Isolated castles and small rtified towns then became useless; the art of rtification was greatly improved and exercised a far more gigantic scale.

The study of the military monuments of the iddle ages possesses an interest beyond the ere gratification of curiosity. It serves to ustrate the page of history, it gives an insight to the customs of our ancestors, and shows us e origin of many of our own peculiarities, abits, and opinions.

The Normans were the conquering race, the axons the conquered: the latter, therefore, ere permitted to rear and name while alive the omestic animals of the country, but these when ead chiefly went to the Norman's table, and e swine became porc, the sheep mouton, and e oxen bœuf. In like manner, though Saxon orkmen were the real builders of the fortified wns and castles, the style and the names of ch detail of the work show them to all time have been for the victors' use. But these ildings show more than this; they point back the time when Norman and Saxon had each common master, for although the Norman yle can be distinguished by its greater refineent from the Saxon, both arose from the forts of each to imitate the work of the omans. In military architecture especially e Romans were the masters, Norman and axon each but pupils; we must, therefore, xpect to find our cities and castles in the middle ges fortified on Roman principles. This is rticularly the case with Southampton, which xemplifies the favourite method of the Romans choosing sites for their fortified camps or ties on ground sloping up from the shore or ver side. The sides thus protected being the rongest, it became necessary to strengthen e works facing the open country, by digging ater ditches to keep the enemy from close pproach to the walls. In those days it was ly by the sap, undermining, the battering-m, or some other mechanical contrivance, all quiring a nearer approach to be of any use, at a fortification could be injured.

The passive resistance of the mass was the ief thing relied on. An extended front was a sadvantage, a castle being more easily defended an a town, and a small city than a great one. he advantage was so much on the side of the esieged, that a small but determined garrison ecame all but invincible. It was necessary to ke each tower in succession, and if these, and e town itself, were taken, the garrison could tire into the castle, and from that into the yet ronger donjon within the castle enclosure. o secure the chance of assistance from without such an emergency, the castle was placed ose to the outer boundary of some part of the alls. In Southampton its position was admirly chosen on the western side, on a mound hich stood in what is now Lansdown-place.

The Romans had brought to great perfection variety of complicated machines, both for tack and defence: after their departure the rt of making and applying these appears to ave been in great measure lost. During the rusades our countrymen appear to have recovered the knowledge of some of the old Roman ilitary mechanism. The fruits of this knowdge, their own experience, and the lessons ught by their adversaries, may be seen by the nprovements made subsequent to the great astern wars in the means of defence. When ie besiegers learned to bring formidable maines close up to the walls, and to protect eir men in trenches covered with sloping mbers, the old flanking towers did not afford fficient protection; and from the embrasures f the old parapets, in a line with the walls, no missiles or weapons could be discharged at an enemy close to the base without leaning out through the loops, with the chance of an arrow passing through the body in the operation. As a remedy to this evil, machicolated parapets were invented, by which, the upper wall of defence being carried out from the main wall on corbelles, a series of openings right over the foot of the walls were left, through which stones or melted lead could be dropped, or arrows shot with impunity to the archer. As the space left for the purpose in question was only alternate with the solid work over the corbelles, an improvement was devised by building up a series of piers from the ground, arching them above, and building the parapet over, leaving a continuous opening vertical to the base of the main wall, through which stones and missiles, *ad libitum*, could be poured down on the unlucky besiegers who might venture to sap or mine.

In the addition made to the Bar Gate in the fourteenth century, the former mode of building machicolations is exemplified, and an example of the latter mode may be seen in the arcaded machicolations added during the fifteenth century, in front of the old walls along the western shore-road.

The invention of gunpowder introduced new principles in military engineering. It became the great object to compel the besiegers to scatter their fire, and extend their line of attack. The power of sending missiles from a safe distance gave such advantages to the besiegers, that it soon became an axiom, "that a place attacked is a place taken." One of the chief reasons, however, why this saying was so near the truth was, that in devising the means of attack, the engineers, having no precedents before their eyes to control their inventive powers, resorted to trenches, earthworks, and gabions, to defend themselves, from the fire of the fortress; but the old system of fortification, which was established on other principles, was too stubborn to bend to the real requirements of a defence by cannon. Military engineers could not shake from their minds the influence of such centuries of existing precedents, and the consequence has been, that they have obstinately adhered to a defective system, from which it will take all the disasters of Sebastopol to sever them.

JOHN ELLIOTT.

PROVINCIAL NEWS.

Lowestoft.—The sum of 300 guineas, we hear, was recently subscribed for a statue of the late Duke of Wellington, at a dinner at the Royal Hotel, Lowestoft, at which the Duke of Wellington (while visiting here), Sir S. M. Peto, Sir S. Bignold, the Mayor of Norwich, and other gentlemen connected with the projected railway and the new buildings at Kirtley, were present. The statue is to be erected in front of the new terrace at Kirtley, which will be called the Wellington Terrace and esplanade, and is to be united with the present Esplanade.

Norwich.—The new free library building is making satisfactory progress, and will be roofed in, in a few days.——The new workhouse question still remains *in statu quo*.

Ipswich.—The corporation of Ipswich have contracted for raising the new cattle-market site selected in the marshes to the required level: the contractors, Messrs. Fisk and Cooper, are now under covenant to raise and drain the site for 1,025*l*.

Ware. — In the little town of Ware, in Hertfordshire, two large malting-houses have been erected in ten weeks. The buildings are each 185 feet long, 40 feet wide, and three floors high. The brickwork was completed in five weeks. Upwards of 3,000 yards of composition floors were required. Gas has been laid on. Messrs. Coker and Oakes are the contractors.

Harrow.—The Elizabethan villa designed by Messrs. Habershon, on the Harrow-park estate, says a *Harrow* paper, is nearly completed. A mansion is being erected for Mr. A. Lang, near the site where the old Amphitheatre was, from which the public and masters of the school beheld the annual competition for the silver arrow. A large mansion is also being erected by the Misses Copland, on their estate at Sudbury; and a villa, designed by Mr. Hopkinson, on London Hill, Roxeth. The foundations are being dug out for a mansion on the estate of the late Dean of Peterborough.

Oxford.—The new mess and reading rooms, which are being fitted up, contiguous to the new Museum of the University, for the accommodation of the men employed on the works, will, we understand, be formally opened on 23rd inst. by the Vice-Chancellor and University authorities, after which the men will be regaled with a substantial supper. The cost of fitting up and maintaining the mess-room and reading-room will be borne by the University authorities and the contractors of the works now in progress.

Uttoxeter.—The old schools in Bradley-street having been found too small and inconvenient, the trustees procured plans, &c. for entirely new schools, with enlargement of master's residence, which they submitted to the Council of Education. The Privy Council, approving of the plans, made a grant in aid of same, as also have several educational societies. There are now two school-rooms, one for boys and the other for girls, each 53 feet by 18 feet, with a class-room, 21 feet 6 inches by 12 feet. The greater part of the teacher's residence remains. The building is of red brick, with stone dressings, Late Tudor; the roofs high pitched, open timbered, and stained. The floors are boarded, the chimney-pieces of stone, and the roofs slated. The architect was Mr. Fradgley, of Uttoxeter, and the builder Mr. Wm. Evans, of Ellastone.

Wednesfield.—On Tuesday, in week before last, the foundation-stone of new national schools was laid here by Lord Calthorpe. The schools are being erected on a piece of ground near the parish church, from the designs of Mr. E. Banks, of Wolverhampton, Mr. G. Spilsbury, of the same place, being the builder. The building consists of a boys' school fronting to the south, 51 feet 3 inches by 18 feet; at right angles to which is the girls' school, 48 feet 3 inches long, and 10 feet wide. The two rooms are separated or united by sliding-doors. A class-room, 18 feet by 14 feet, is provided for each sex, that belonging to the girls being also used as a committee-room. The walls will be 12 feet high to the spring of the roof, which will be plastered over the rafters about two-thirds the height, the principals being stained, and at that height ceiled, apertures being left for ventilation in the cavity between the roof and ceiling, and by openings in the gables. On the east side, which is the principal elevation, there is a bay window lighting the committee-room, and above the gable a bell-turret rises to the height of 40 feet. The building is to be of red brick, with stone dressings to the doorways, windows, quoins, &c. Play-grounds are provided for each sex, with other conveniences, including lavatories, and a house for the master will be attached on the west side. All the floors will be boarded. The whole cost will be about 1,400*l*.

Dudley.—At a recent meeting of the Board of Poor-law Guardians for Dudley, a letter from Mr. Nicholls, architect, was read, which stated that by the 10th of this month the plans of the new workhouse would be ready for the inspection of builders, and that he would be obliged by a meeting of the Building Committee being called, to arrange for the advertising of a notice to builders, inviting them to send in proposals for contracts for the execution of the work. Tuesday, the 9th, was named as the day on which the meeting of the Building Committee should be held.

Warminster.—A site has at last been procured for the erection of an "Athenæum" in this town. The sum of 1,300*l*. is the proposed outlay.——The Corn-market House (Mr. Wyatt's) is nearly completed.

Nantwich.—A public meeting was held here lately, to consider the project of erecting a Town-hall. Mr. J. Tollemache, M.P. has offered the donation of an eligible piece of land. It was unanimously resolved to accept Mr. Tollemache's offer with thanks. The chairman stated that several subscriptions had been already promised.

Frome Selwood.—The opening of John the Baptist's new infant school took place on Saturday before last. In the evening the workpeople were regaled. The architect was Mr. Cundy, and the builder, Mr. Brown.

Torquay.—By the exertions of the Rev. R. Rolfe, an Infant National School has been erected in the populous new district of Bostonfields here. The school, which is built from the designs of Mr. Edward Appleton, architect, is Italian in character, constructed of the native limestone with red brick and red sandstone dressings, the whole pointed with black mortar. The roof, which is open, the timbers stained, and tied with wrought-iron rods, is covered with red Italian tiles, projecting deeply over the eaves, and surmounted with a lantern finished with a gilt cross. The work throughout is simple. The windows are double lights, divided with brick mullions.

Milford.—A new National School for the Established Church is about to be erected in this town. The site fixed upon is in the Backstreet, near the Tabernacle School-room. Like the Hubberston National School, its erection will be under the superintendence of Mr. W. H. Lindsey, architect.

Castle-hall.—The architect just named is at present engaged with some extensive works now in progress at Castle-hall, the seat of Colonel the Hon. Fulke Greville. The new front is supported with lofty columns, and has wings. On the south side is a small tower, and on the north, one about 90 feet high, nearly finished, in which will be sculptured figures emblematical of the four winds. Beneath the northern tower is the principal entrance. At the base of the structure preparation is making for a raised ornamental terrace, and beneath that a gravel terrace, with, still lower, another, and the whole gradually sloping to a fish-pond.

Cwmyoy (Monmouthshire).—The committee appointed to superintend the erection of schools here have fixed upon a site. The school-house and residence for master (on the National School principle) are to be built from the design of Mr. J. H. Evins, architect, Abergavenny.

Castle Cary.—The new Market-house here was opened on Tuesday, in week before last, and celebrated by a public dinner. The Market-house was built by a joint-stock company. The architect is Mr. Penrose. The building consists, on the ground-floor, of a pitched market-house for corn and cheese, with shambles behind for meat, bacon, &c. Over the main building is a Mezzanine floor, forming a store for corn, and by its side is a reading-room. Above these, approached by a winding stair, is the assembly-room, 52 feet long, 21 feet wide, and 21 feet high, with oriel window, open-timbered roof, and music gallery: adjoining is a refreshment-room. The centre of the building is surmounted by a turret. The building is Gothic, of the end of fourteenth century. The chief effect is given by the pointed relieving arches within which the entresol is placed. The general forms have arisen out of the peculiar nature of the ground and the levels. The building has been erected of Castle Cary stone and blue lias, dressed with Doulting stone, by Mr. M. Davis, of Langport, who has recently restored the church of Castle Cary. The cost, we hear, will be about 2,300*l.*

Tarbert.—Mr. Miller is the contractor with the board of works for the new pier at Tarbert, for 10,300*l.*

Bardwell.—New schools were opened here on Saturday, in week before last. They are in the Tudor style of architecture, and have been erected from designs by Mr. Thos. Farrow. They comprise boys', girls', and infant schools, and a dwelling-house for master and mistress. They are built of black flint, with Caen stone dressings, and the entrance in front is surmounted by a bell-turret. Sir Henry Blake gave an acre of land to the parish to build the schools upon, and the cost of erection was defrayed by the Rev. A. P. Dunlap, the rector, in accordance with the wish of his deceased mother, Mrs. Dunlap, of Bardwell.

Manchester.—The extensive premises for the new Mechanics' Institution, in David-street, are progressing, the basement story being completed, while the ground-floor is in an advanced state. The design for the new building was made by the late Mr. J. E. Gregan, architect. It is expected that the institution will be completed by Midsummer, 1856. The cost of the building and its interior fittings will not be less than 22,000*l.* It is to be opened with an exhibition.——In the Levenshulme suburb of the city a committee was formed in December, 1853, with a view to promote the building of a church, schools, and parsonage. One-half of the school has been built. The room affords space for 300 persons. The site of the schools consists of an acre of ground, given by Mr. C. C. Worsley, of Platt, Rusholme. A sum of 456*l.* was raised in the neighbourhood, and the committee of council on education awarded 494*l.* towards the estimated cost (1,150*l.*) of completing the schools and master's house. The building committee require a further sum of 200*l.* to meet a debt of 70*l.* upon the portion already built, and additional outlay essential according to the plan. The school is in the form of the letter T, the girls' room being the top, and the boys' the upright part of the letter, and the whole will hold about 600 persons.

Edinburgh.—The drainage committee of the city police commission having recommended the board to accept the estimate of Mr. John Alexander for completing the drains in Nicolson-street and neighbourhood, which had been left unfinished by the original contractors, the estimate, which amounted to 5,895*l.* with 6s. additional per cubic yard for excavating rock, has been accepted.

MODEL DWELLINGS, DUDLEY.

Some time in October, 1853, a movement was commenced in Dudley to promote the improvement of the dwellings of the industrious classes, which ended in the formation of a Branch of the London Society. We are pleased to hear that our observations on this head influenced the promoters in Dudley.

The capital of the Branch is 10,000*l.* about 3,000*l.* of which are paid up. With this encouragement the committee purchased a plot of land of upwards of 10,500 yards, including mines and minerals, and bounded on two sides by roads. Upon this a quadrangle is planned for distinct blocks of family dwellings, having in the centre baths, laundries, washhouses, and bakery. Detached from this is to be an infant school, for the safe keeping of those poor children who would be otherwise left alone while their parents are at work. The quadrangle is about 240 feet by 120 feet in the clear. A large gas-lamp, with reflectors, will light the whole of the quadrangle. Including 500*l.* from Lord Ward, the committee have sufficient in hand to pay for the land, and to liquidate the builder's contract. A new clause in the charter will enable the committee to declare a dividend of 5 per cent. which will tend to strengthen the hands of the promoters in this good work.

Each house comprises three distinct bedrooms, living-room, kitchen, pantry, water-closet, coal-cellar, and back and front lobbies.

The living-room will have Nicholson's patent kitchen-range, with a smaller one in the scullery. A copious supply of water is laid on through gutta-percha tubing to the sink, which has a plate-rack over, and cupboard beneath for pots, &c. The cisterns are of slate, and Jennings's water waste-preventers, india-rubber tube-cocks, &c. are used throughout. Besides a commodious pantry, having a settle for beer, &c. there are two cupboards in living-room, with place for books. A press for clothes is arranged in bed-room, over portions of the landing. The coals are under the stairs, sunk two steps and arched: provision is made for two tons, it being a comparatively cheap article in the "black country."

Instead of "wood-bricks" the architect has adopted "Round's patent" for the jambs of doorways, having a plug inserted in the brick itself, dovetail-wise, and secured with cement. The architect intended using hollow bricks, but was prevented by the dispute between the patentees, and the disinclination of the local brick-yards to undertake the contract. In the bedrooms will be grates and chimney-pieces in one piece, to which a valve will be attached to prevent the admission of cold air to the smoke-tube. The front chambers have the ordinary breast, which forms a feature in the elevation. The water-closet on landing is fitted with Guest's self-acting apparatus, together with a pottery hand-basin and drain, to which water is conveyed by gutta-percha tubing. From this tap the chambers will be supplied with water.

The smoke from the flues in the houses (excepting small front room) will be conveyed by 9-inch tubes to a 12-inch central shaft, formed of socket-jointed tubes, with the necessary junctions, placed in the centre of a shaft 2 feet 3 inches wide, thus leaving a space on either side for a vitiated air-chamber. The plan adopted by the Metropolitan Association, of having distinct air-chambers and smoke-flues, answers well, we are told, but takes up a considerable space, besides adding greatly to the expense.

It was this which induced Mr. Wigginton, the architect, to try and obviate what he considered a difficulty and drawback, by the plan which he has carried out at Dudley, saving thereby some pounds in each building. The heat imparted to the air-chamber from the smoke will create a current able to draw off any impure air which would otherwise accumulate in the rooms, and sufficient heat will be retained at night (from the universal practice of "raking" the fires) to cause an equal velocity, when, in fact, the means of ventilation are more required than in the daytime.

Each room will be ventilated by a valve and tube communicating with the air-chamber, the valve being placed in the ceiling of the bedrooms, and in the chimney-breast of the ground-floor apartments.

The work is being executed by Mr. Nelson, contractor, of Wolverhampton.

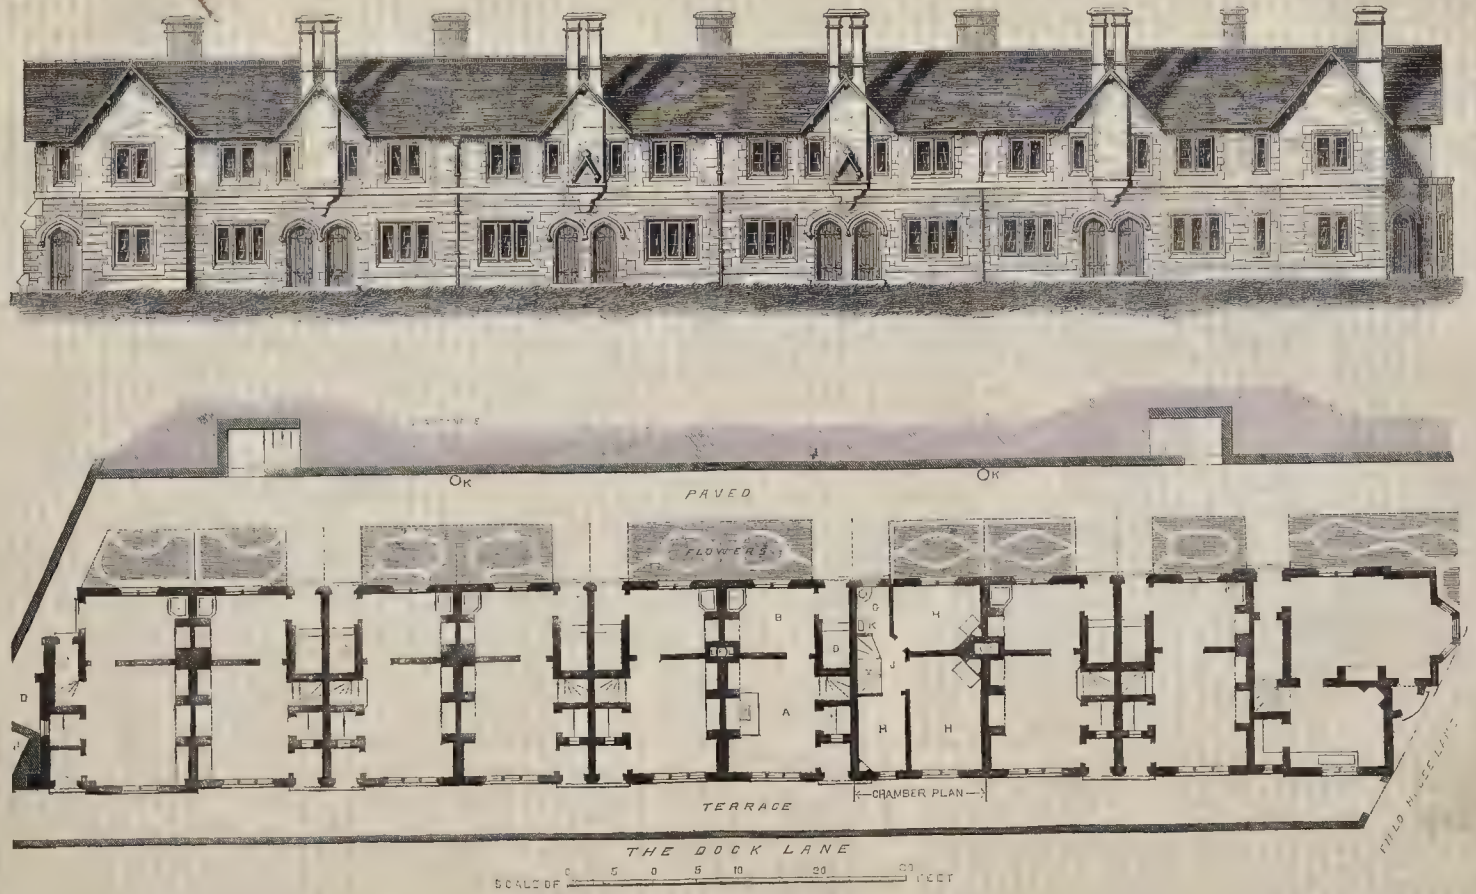
LIVERPOOL ARCHITECTURAL AND ARCHÆOLOGICAL SOCIETY.

The meetings of this society were resumed on the 3rd inst. when Mr. John Hay, president, read an inaugural address. He observed that, notwithstanding the great struggle which was going on between the nations, the public mind was not distracted from those pursuits which ennobled and elevated the human mind. The arts and sciences were being studied with renewed vigour, and there was scarcely a town or village in the empire in which the architect or the engineer was not engaged in constructing great works.

Mr. Picton then read "Some Account of Crewe Hall and Nantwich," with reference to the excursion of the society in July last. To this we shall return hereafter.



THE BUILDERS' BENEVOLENT INSTITUTION.

At a recent meeting of the supporters of this charity, Mr. Thomas Cozens in the chair, it was resolved that an election of pensioners, one male and one female, should take place on the 29th November next. Mr. Joshua Higgs expressed a hope that the builders generally would liberally patronize the annual dinner of the charity on the 30th instant. We echo this hope sincerely. There is already a very full list of stewards, but there cannot be too many. We trust that there will be a weighty addition made by the dinner to the funds of the charity.

The subscriptions and donations received last year amount to 1,225*l.* 9s.; and 400*l.* stock have been added to the amount funded in the names of the trustees, making the total amount invested, 4,750*l.*—3,250*l.* stock to the relief fund, and 1,500*l.* to the building fund, with a balance at the bankers' of 338*l.* 2s. 11½*d.*

The number of pensioners now enjoying the bounty of the subscribers and donors is twenty-nine,—sixteen of them males, and thirteen females.

Hobson's Conduit, Cambridge.—In answer to our observation as to the removal of Hobson's conduit, the *Cambridge Chronicle* says,—"Our fellow-townsmen feel too strong an attachment to his memory to permit any memorial of him to be destroyed. It has been proposed to put up the old conduit at the entrance to the town in Trumpington-street—a very appropriate spot, where it would form an additional ornament to that already beautiful promenade. For our contemporary's information we may state, that a large picture of Hobson on horseback is preserved in the Town-hall, and that one of the streets in the town is named after him."

MODEL DWELLINGS, DUDLEY.—Mr. Wigginton, Architect.

CHURCH-BUILDING NEWS.

Lincoln.—It is understood that the Dean and Chapter purpose almost immediately to remove the stained glass from the window of the north end of the great transept, and to have it replaced securely and restored perfectly, Mr. L'Estrange, who some years since inspected it closely, having pronounced that the glass was placed in very insecurely, and was liable to damage from strong gusts of wind. Two more memorial windows are shortly to be added to the two already placed in the south aisle of the nave; and the memorial window to the late bishop will, ere long, be ready to be placed in the southern part of the small transept. In two or three years, therefore, considerable regeneration of the cathedral windows will have been worked out. The new eastern window throws a coloured light amongst the old carved work of the choir; and if the west-end windows were also of stained glass, the "dim religious light" would be largely obtained. To secure this object it is proposed that a public subscription be commenced, and it is understood that the Dean and Chapter would contribute liberally.

Ilkeston.—The following are the alterations that have been made in Ilkeston Church, under the superintendence of Mr. L. Walker, of Leicester, architect:—The aisles have been rebuilt, and produced westward, to their original length; a large new area enclosed within the church; a new vestry built; a chancel arch erected; the principal entrance made through the tower, and the western arch, which was blocked up, has been re-opened and restored: the whole of the windows, doorways, roofs, and nearly all the seats, are new: additional churchyard space has been enclosed; and provision has been made for warming and lighting. The style of the tower is to be altered from Italian to Early English. In addition to replacing the old decayed pews by new seats, further accommodation has been gained for 345 worshippers. The new buildings are said to be in strict accordance with the ancient design (Early Decorated). The stained glass window on the south-east end is the work and offering of a neighbouring clergyman. The additions to the font, to make it correspond with a marble base discovered under the flooring, are presented by Mr. Walker, the architect; and the whole of the new carving, the parapet, and several additions, by a friend. The works have been executed by Messrs. Lindley and Firn, of Leicester, builders and contractors.

Nottingham.—The foundation-stone of the New Congregational Church, at Snenton, Nottingham, was laid on Monday before last. It is in the Italian style, and will accommodate 800. The design was selected from amongst the "model" designs of the English Congregational Chapel Building Society. Mr. Oliver, jun. is the architect.

Harvington.—The restoration of the church of Harvington, near Evesham, has now been brought almost to a conclusion. On the re-opening in December, 1853, an unexpected piece of good fortune awaited the parishioners in the shape of a cheque for 1,000*l.* which the rector put on the plate as a present from Mrs. Lydia Ward, a native of the parish, then in her 98th year. This donation has been expended. The old Norman tower, built originally for a smaller edifice, has been surmounted by a broach spire with four louvre windows, made of timber, in order not to try too much the old and loosely-connected Norman walls of the tower, and covered with heart of oak shingles. A vestry has been added to the church. The three old bells have been replaced by a peal of six, cast and fixed by Messrs. Mears, of London. The bells are fixed on a frame, and instead of being swung on a wheel and hit by clappers, are struck by hammers on the inner edge of their rims, the hammers being put in motion by wires directed by pulleys into a chamber below, where they are connected with a key-board (as in a similar instance at Abberley new church). The keys are made with knobs of wood, and tunes may be easily played on them. In the bell-chamber has been also fixed a clock, made by Mr. Dent, of London. The windows of the nave have received new glass, with coloured borders, and the tracery is filled in with glass restored partly from remains found in the windows of the choir, and partly from fragments of the same date found in the neighbouring church of Sedgeberrow. Stained glass has been inserted in the flamboyant east window, as a memorial to Mrs Lydia Ward. It is the production of Mr. F. Preedy, of Worcester. The design of the east window is the Ascension. The spire was erected by Mr. C. Hunt, builder.

Abbot's Bromley.—The re-opening of St. Nicholas Church, Abbot's Bromley, took place on Thursday, in week before last. The architect employed was Mr. G. E. Street, of Oxford. The work of restoration has included the re-building of almost all the external walls, new roof to chancel, the whole of the aisles, and a new south porch, and new sacristy; and where the old walls have been sound enough to stand, they have been scraped and restored. The whole floor of the church has been lowered considerably, so as to show the bases of the columns. The whole eastern part of the church is entirely new; no traces of its original design having been left by the church despoilers of last century. The east window has seven lights with geometrical tracery and mouldings. It is flanked by buttresses, and the gable surmounted by a cross. The vestry terminates the east end of south aisle, and beneath it there is a chamber for the heating apparatus. The windows, &c. in the eastern part of the north aisle have been restored by Mr. T. Turnor and friends, as a mark of respect for Lord Bagot. The whole south aisle is new, and has buttresses and windows founded upon the whole windows of the nave. The new south porch is of wrought oak, and its sides filled in with open tracery work. The nave and aisles are filled with simple moveable open seats. The chancel is divided from the nave and aisles by low screens of stone and alabaster, with gates of open tracery work, and is raised on steps gradually ascending to the east. The chancel stalls are temporary, for want of funds to execute the stall-work originally designed. The old sedilia, &c. have been restored. The architect prepared a design for a steeple. The cost of the restoration amounts to more than 4,000*l.* of which 1,500*l.* have been borrowed on the rates, to be repaid in twenty years, and there still remains a deficiency of upwards of 500*l.*

St. Hilary.—The rebuilt church of St. Hilary, Cornwall, consists of porch, nave, chancel, and north and south aisles. The roof is lined throughout with Memel pine. The style adopted is that of the thirteenth century. The chancel and sacrarium arches are supported by detached columns of black marble. The benches are low, open, and uniform, the ends being of oak. The chancel is fitted with stalls, and the floor is paved throughout with tiles.

Truro.—The new church in St. George's district, lately consecrated, is the fourth which has been built in connection with Truro, and the third within the town itself, within the last twelve years. The new church is 135 feet long, including the apse and base of the tower, and thirty-two and a half wide at the nave. It is planned to admit of enlargement by side aisles to the extent of the transepts. The style is Early English. The roof is open. The seats, of stained deal, are all open and free. Three windows of stained glass occupy the several faces of the apse, the centre representing the Crucifixion, the other two, the Beloved Disciple and the Mother of our Lord, as on either side the Cross. Two other windows in the choir represent the instruments of the crucifixion; and there are three other windows of stained glass, two in the chancel, and one in the east side of north transept. A font, of St. Stephen's granite, stands at the west end, in the base of the tower. The tower is fitted for a peal of bells, but these, as well as the spire, wait for funds.

Birmingham.—The Church of the Saviour here has been decorated in the interior. Mr. Dawson, who is the pastor, is said to be somewhat sceptical as to the influence of whitewash and ugliness on piety, and has made his chapel a standing protest against the supposition that Christianity is inimical to the progress of the arts, or that because they were patronised at Rome, therefore they were to be held up as objects of aversion and abhorrence to all Protestants. This chapel, remarks the local *Journal*, forms, if we mistake not, the only provincial example of how colour may be used somewhat freely in an ecclesiastical edifice. Mr. William Harris, of Birmingham, was the architect entrusted with the preparation of a suitable design. One of the chief principles on which the architect acted was the rejection of imitative painting, from the necessity of strict truthfulness being specially observed in church architecture. The style of decoration is Italian, in accordance with that of the building. In the ceiling only are primary colours used to any large extent. The prevailing colour here is blue. The divisions between the lights and between the compartments in the centre, the soffits of which are coloured deep red with a yellow fret, are in dark shadow. Symbols of the Christian religion are introduced in the ceiling. The colour upon the walls is a delicate aërial grey, designed to show out the ornamentation and the architectural construction, and keep up in effect the size of the building. There is light salmon colour on the pilasters, architrave, and frieze. The capitals of the pilasters form a prominent part of the design: they are decorated with a white and gold lily upon a blue ground. In the centre of the side wall panels are placed the symbols of the four evangelists, together with the dove, the cross, and the inverted torch within the symbol of eternity. These are quiet in form and colour. On the glass in the ceiling is painted a vine illustrative of the text, "I am the vine and ye are the branches." Mr. Whitworth, of Birmingham, carried out the designings. The lighting is also being improved. There will be a couple of sunlights on the same principle as those in the Town-hall; but an additional source of light will be placed between the glass ceiling and the roof, strong reflectors being used to throw it into the body of the building. Warming apparatus has been laid down.

Sheffield.—The foundation-stone of Ebenezer Wesleyan Reform Chapel, Portmahon, was laid on Monday in last week. The chapel and schools are designed by Mr. Edward Macdougall, in the Anglo-Norman style of architecture; and the cost is to be under 800*l.* They are to be built by Mr. Hinde.

Skellingthorpe.—The group in Mr. Huddlestone's window, named "Christ raising Lazarus," should have been "Christ raising Jairus's daughter." The windows in the church, with the exception of Mr. Carline's, were executed by Messrs. Clowson and Fussell.

GAS.

The Anglo-Romano Gas Company.—A meeting of this company was held on the 17th, in London, when the chairman, Mr. Keep, of Birmingham, read the report of the Gerant (Mr. Jas. Shepherd), upon which he passed encomiums. There was also a very satisfactory report from the President of the Conseil de Surveillance. The affairs of the company were discussed, the Gerant, in reply to several shareholders, giving detailed information upon the working of the concern, the satisfactory progress of which was demonstrated by the fact that contrary to the general run of continental gas affairs, the first six months' working presented a profit of 28*l.*; the second six months' 350*l.*; the third six months, 780*l.* The report, proposing a dividend of 2½ per cent. for the half-year past, payable on and after the 24th inst. was received and adopted, and thanks were voted to the Gerant for his zeal and energy.

Miscellaneous—"The South London Gas Consumers' Mutual Protection Association," has been organised, for the purpose of withstanding the combination of gas companies on the south side, whereby they have literally mapped out and shared and divided the South London district amongst them, under pretence of being thereby *able* (and truly so, too, were they but *willing*) to promote the interests of the gas consumers, whilst in reality, as alleged, boasting that now "there was nothing to prevent the directors from raising the price of gas to 20s. per 1,000 feet," as indeed it once actually was. A company established on free trade principles was the most active of all in promoting this rapacious and selfish combination, and they had almost juggled the House of Commons into legalizing the monopoly last session. Amongst the special objects which the Protective Association have in view, as stated in their prospectus, is a close and constant attention to the quality and price of gas, and to "the extraordinary and inexplicable increase of registration by meters experienced

by almost every consumer," an increase against consumers, said to have been discovered to be equally prevalent elsewhere, as at Liverpool.——Mr. Warner, of London, lectured lately to the Liverpool Polytechnic Society on "the System of Retailing Gas." Having explained the construction of a meter, the lecturer proceeded to correct, as he said, an error of Mr. Clegg's, that the gas was displaced by the water; and contended, in opposition to Mr. Taunton, that a meter, wet or dry, would, if properly constructed and properly placed, act equally well to whatever temperature it was exposed. He then alluded to the three systems of retailing gas, namely—selling it by weight, by contract, and by measurement, and urged that the last was the only one practicable.——The London Gas Company have declared a half-yearly dividend of 15s. per share, and the South Metropolitan Gas Company have appropriated 3,000*l.* for dividend at the rate of 3 per cent. for the half-year, 1,000*l.* as a bonus of 5s. per share, and the balance to be placed to the credit of the wear and tear account. The dividend is thus estimated to be at the rate of 8 per cent. per annum, clear of income tax.

MASTERS AND MEN.

WESTMINSTER COUNTY COURT.

Hayes *v.* Sir Morton Peto and Co.—Mr. Roberts, in opening the plaintiff's case, said the claim arose out of the contract which the defendants had entered into with the Government to make a railway in the Crimea. In this action, the plaintiff was a mason, and sought to recover 18*l.* for wages due under a contract entered into between him and the defendants.

Wm. Henry Hayes, the plaintiff, said, "I signed an agreement, which has been referred to. In consequence of the hurry, I did not sign it until I reached the Crimea, some time after. I entered the defendants' service on the 7th December last, and started for the Crimea on the same day. On arriving at the seat of war, I proceeded to fulfil my duties in the first instance as staff-man. I eventually became traffic manager. Col. McMurdo had the command of the Land Transport Corps, and on the 9th of June last he directed me to procure some waggons to enable him to send up some ammunition and powder to the camp. I had sent up six waggons that morning. He requested me to get more. I had no waggons at my end of the line, and I therefore proceeded to the heights of Kadikoi, about two miles and a half from Balaclava, to get some from thence. I found all the waggons there loaded with the sick and wounded, and the line blocked, owing to some disarrangement. I was then obliged to go on to the terminus, and I there found some waggons, but they were not in a fit state to be brought down, and I was unable to carry out Col. McMurdo's orders. I then returned to Balaclava; but it was rather late, as I had to walk both ways. I lost no time in endeavouring to carry out my instructions. The next day I received a letter from Mr. Beattie, informing me I was dismissed for being absent from my duty. I saw Mr. Beattie on the following Monday, when he told me to go to his secretary, Mr. Stone, to get a ship. I saw him again on the 2nd of July, when I signed a letter stating that I had been paid up to the time of my discharge, the 9th of June. Mr. Stone wrote that letter, and I signed it; but I distinctly understood from Mr. Stone that I was to be paid up to the time of my arrival in England. My claim for wages due from the 9th of June to that time, together with my railway fare from Portsmouth to London, amounts to 18*l.*"

Cross-examined by Mr. Woodman.—"I went out first as staff-man. Acted as such for two months. I then went into the commissariat department. I used to draw the commissary stores. I then became traffic manager. I was once discharged and reinstated by Mr. Beattie. My duties were to see the waggons loaded and send up the ammunition, &c. to the camp. I received orders from Col. McMurdo. I conceive it was my duty to obey him as well as Mr. Beattie."

Mr. Woodman, on behalf of Sir S. M. Peto and Co. said they had no desire to act illiberally; but they believed this claim to be unjust and an after-thought. The accounts they had received of the plaintiff's conduct were most unsatisfactory. He had habitually neglected his duty, and seemed to have gone out under the impression that he was to do nothing, and live like a gentleman. By his own admission, he had been reinstated once, and the letter he had signed acknowledged that he had been discharged on the 9th June. In addition, there had been two cash accounts prepared, one on the 21st of June, and the other on the 2nd of July, which had been accepted by the plaintiff, and signed by him, and by which he admitted that his claim was only for 209½ days. The sum that he was entitled to was 4*l.* 16s. being the balance of 62*l.* 17s. This sum had been tendered, and was now paid into court. The only object Sir S. M. Peto and Co. as the agents of the government, had in view, was to resist a claim they considered unjust, and which they, therefore, could not ask her Majesty's Government to sanction.

The learned Judge, after looking at the accounts, said he could not get over the difficulty the plaintiff himself had created, by assenting to limit his claim to the 209½ days, and his verdict must be for the defendants.

Mr. Woodman, on behalf of the defendants, waived their claim to costs.

RAILWAY MATTERS.

French Lines.—The following are recent returns of the gross receipts of the principal French lines of railway.—

	Week ending	Passengers.	Goods.	Total.	Corresponding week last year.

Remunerativeness of Low Railway Fares.—For some time past the Lancashire and Yorkshire and East Lancashire Railway Companies have been carrying passengers from Manchester and other places to Southport at very low fares. At the recent half-yearly meeting of the Lancashire and Yorkshire Company, an inquiry was made as to the effect of this competition, and the vice-chairman is reported to have replied that "the result had been so far satisfactory. From the 5th of August to the 2nd of September the Company received 100*l.* more at the low rates than before, and the result to the East Lancashire had been similar. It had developed one of the most extraordinary facts in connection with railway history. He was not at all prepared to find, as had been the case, that the receipts for the two companies had been 1,523*l.* instead of 708*l.* for the previous half-year."

American Progress in Railway Construction.—In the formation of the Troy and Greenfield Railway the application of machinery, aided by steam power, is about to be carried into effect on an extended scale, more particularly in the formation of tunnels. This line is forty-two miles in length, and will connect the present railway from Boston to Greenfield at Troy with the Buffalo line. The tunnel in which the experiment is proposed to be first made will pass through the Hoosack Mountain, in the range of the Green Mountains. The Hoosack Mountain is mainly of mica slate. The stratification, or pitch of the seams, is nearly vertical, almost at right angles with the line of the railway through the tunnel. The length of the tunnel is 24,300 feet, rather exceeding 4½ miles, having an ascending gradient of 1 in 210 in each direction. The eastern summit of the mountain rises 1,700 feet, and the western 1,200. The tunnel will pass directly through the mountain, and will be 20 feet in height, and about 24 feet in diameter. The total contents of the tunnel are estimated at 390,000 cubic yards. It is proposed, by machinery worked by steam power, to drive a heading through the mountain 8 feet in diameter, and by means of cross-cut drills to cut into the face of the rock transversely in sections, which, by aid of gunpowder, will readily be displaced, the machinery in its progress removing and distributing the soil at either end as the work proceeds. Owing to the height of the mountain, it is impossible to sink shafts: recourse, therefore, must be had to artificial means to thoroughly ventilate the tunnel, which will be accomplished by the process of exhaustion. The inclination of the railway being from the ends upward toward the centre of the tunnel, complete drainage will be attained. This tunnel will be longer even than the Box Tunnel, on the Great Western line.

Odds and Ends.—The London and North-Western train miles have been reduced 1,000 a week, by which, and other matters, 800*l.* a week will, it is said, be saved, or, in round numbers, 42,000*l.* a year. ——According to a report of the Wellington and Severn Junction Company, a contract has been entered into for the works between Ketley and Horsebay, and economy will be exercised in the outlay.——At a meeting held lately at Great Malvern, resolutions were passed in favour of the immediate construction of the Worcester and Hereford Railway.——The project of a line from Epsom to Letherhead has received the support of the inhabitants of the latter town.——It is stated that the East Suffolk Railway will be leased by Sir S. M. Peto at six per cent. per annum for fourteen years, on the actual cost, interest to be paid at the rate of three and a half per cent. during construction.——Great exertions are being made to carry out the line from Yeovil to Exeter. ——Several new projects have been brought forward to complete railway communication in Aberdeenshire, and they have received the sanction of the inhabitants and others locally interested.——The shareholders of the Ulster Railway have empowered the directors to create additional capital for completing the extension from Armagh to Monaghan.——The Turkish Government have resolved to throw open to the competition of European capitalists the exclusive privilege of constructing and working certain projected lines of railway. In this view, the line between Constantinople and Belgrade has been selected to commence with.

DRURY-LANE THEATRE; AND EGRESS.

The difference in the dates of the alleged commencement of the building of Drury-lane theatre may be accounted for in this way. The 21st October was the day on which the builder took possession of the premises, and the first workmen were taken on; but the first stone (as it is called) was probably not laid till the 29th; the intervening time being occupied in preliminary works; for it is well known to professional and practical men that "laying the first stone" is only a ceremony, and that much previous work is generally executed.

Among the contrivances for guarding against accidents and loss of life by fire, one was, that the door-frames of the outer doors were made to act on pivots, so that if, on an alarm, the doors should get closed (a thing not unlikely), the pressure of the crowd would force the doors outwards from the frames moving on a centre: this I presume still exists, unless they have been altered, or rust and neglect have rendered them useless.

H. B. H.

SCENERY AT DRURY-LANE.

Accustomed as we have been for some years past to comment on the efforts of our scene-painters, a practice, we venture to say, that has led the daily press to give more attention to these artists than was given formerly, it would not be just if we allowed Mr. E. T. Smith's spirited endeavours in this respect at Drury-lane to pass unnoticed. A very large sum of money, and much thought, have been expended on the production of "Nitocris," and some very striking effects have been produced. We may not say that the scenery is perfect; it is hard and over coloured: the executants, able as they are, wanted a Grieve or a Beverley to advise with; but there is, nevertheless, much to admire and praise. The effect of space in the last scene is very striking, and we must not omit praise to Dykwynkyn for the costumes. A good scene, the Sphynx at the foot of the great pyramid, used in the first instance, is now omitted. The artists named in the bills are Messrs. Nicholls, Cooper, Cuthbert, Aglio, and others.

"Married for Money" is a capital little comedy, capitally acted by Mr. Charles Mathews, Mrs. Frank Matthews, and others.

THE SHEFFIELD THEATRE.

Considerable alterations and improvements have been made here, at the cost of more than 3,000*l.* under the direction of Messrs. Flockton, architects.

The decoration and gilding are by Mr. Anderton and Messrs. Hinkins and Eccles, of Manchester; the upholstery by Mr. Johnson, of Sheffield. The audience portion of the house is much improved, both as regards comfort and convenience. When the house is full the box lobby may be used for spectators, it being so constructed as to give a full view of the stage. While the comfort of the more aristocratic portion of the audience will be fully provided for, that of the humbler visitors has not been forgotten. The ventilation is effected by means of two cold-air chambers, one on each side of the house. Fresh air from these sources can be admitted at pleasure at the back of the boxes; while the hot air, on the other hand, will be carried off by tubes over gas-lights at the back of the boxes, and thence conveyed through a large ventilating shaft in the roof.

The auditory, in shape, somewhat resembles the old Lyceum. The pit will contain about 1,000 persons, with two rows of stalls in front. The gallery will contain above 1,000 persons. The decorations are of composition, on pink

ground, and etched in with gold. The stage and machinery, under the direction of Mr. R. Strachan, are constructed with care, commencing with a mezzanine floor, similar to Drury-lane. The stage itself is so formed as to be adjusted to any position that dramatic effect may require, by means of slides, on an entirely new principle, so arranged as to draw off at any point for the purpose of working screws. It is well fitted with traps and other stage appliances, all of which are on a new principle, embracing every improvement that modern theatrical machinery possesses. At the back of the stage there is a large painting-room, fitted with every required convenience. There are two tiers of flies, as in large theatres.

The gas department was entrusted to Mr. J. D. Palmer, jun. of the Royal Italian Opera, Covent Garden, who has made many improvements in the lighting department, particularly a double-action float for three colours, working from one cock: there is also a regulation-plate, for arranging the whole of the lights on the stage.

AN APPEAL FOR THE ARCHITECTURAL EXHIBITION.

The Great Exhibition of Paris, differing from that of London in several essential principles, has established accordingly several essentially different results. Among the most remarkable of these I believe is generally admitted to be the decided superiority of the English school of architecture; a superiority which we never claimed, and which comes upon us by surprise. If we are deficient in that brilliant but ephemeral taste which, animated by a brighter sky, can make a street a gallery of the graces, or a square the garden of a palace, we are none the less supreme (so it appears), in our colder air, in that substantial and manly statuesque building—aiming at less and succeeding in more—that great art—which through the ages marks the road of time, and writes the record of the just pride of nations, as in the hand of God they rise, and culminate, and fall.

There is a reason for everything, and a reason for this; but rather than discuss the unsuspected cause, let us adopt the grateful result, and affirm at once that it is obviously worthy of exertion to follow it up.

Some years ago an annual architectural exhibition was established in London. Like all such efforts, it has had to pass through early times of patience and hope. The original promoters, so soon as their project could walk alone, generously relinquished their authority: in plain language, the enterprising young men who set the exhibition first on foot, and for a year or two paid its expenses, handed it over cheerfully to a committee of subscribers as soon as better men than themselves could be found to adopt this charge. A scheme so set on foot and so conducted deserves success.

This institution forms a nucleus now around which the architects of England are this year called upon (in view of their success in Paris) to collect an exposition of their art, which shall display at home that supremacy which has so unexpectedly appeared abroad. The public will now look for something different from our former exhibitions: they will drop in upon us this year to see what was seen in Paris. They must not be disappointed: we must show them rather that if we had been warned to exertion we might have done better still. There is no doubt that upon office walls throughout the kingdom there hang at this moment the materials for such a display as the architectural world may find it worth their while to come to London this winter to see, to say nothing of the two months yet before us for the preparation, every one of us, of something special; and to say nothing too of the specimens of building manufactures, which England, beyond all the world besides, can in such interesting abundance and excellence supply.

To produce the desirable result of an Architectural Exhibition, this year, which shall keep up our reputation, so suddenly but justly acquired, I would beg to suggest one or two proceedings which I think are worthy of consideration by the Exhibition Committee, the profession at large, and the Institute of Architects: and in passing, I would congratulate the Institute upon the position which a late legislative enactment gives to that body, and which I trust will dispose it to such exertions on behalf of professional objects as befits its now recognised authority.

First, an extraordinary appeal to be addressed to the profession, every man to have in readiness by December next the best illustrations he can supply of his favourite style of design.

Secondly, a regulation to be established that every exhibitor's works shall, as far as possible, be kept together on the walls.

Thirdly, a special request to be made to such gentlemen as are known to possess superior drawings, that they will send them for exhibition; and a similar request to the architects of works of recognised superiority and importance.

Fourthly, a complete assortment of articles of manufacture to be collected under a special committee.

Fifthly, a proper and liberal recognition of merit (a diploma will be sufficient), to be provided for under a jury of architects of the first rank.

Sixthly, the Institute to be memorialized to bestow their medal upon a certain number of the best designs and specimens exhibited.

Seventhly (to make up the perfect number), all jealousy to be, as far as in us lies, carefully put in our boots and trodden under foot for the occasion,—not merely that jealousy by which weak human nature is blind to the antagonistic merit of another, but that jealousy more dangerous still—more opposed to the progress of one's order and of one's self — by which we are induced to fall back on pride, and decide the friendly contest by declining it.

In conclusion, I beg you, sir, to give us the weight of an article on the subject, and to request and insert in your columns the suggestions of the profession upon this assuredly interesting theme. R. K.

A NOTE FROM CORK.

Building has been tolerably active during the past summer, and all classes of building artizans are at present fully employed. The timber jetty to the new pier at Queenstown is just completed, from the designs of Sir John Benson, harbour engineer; contractor, Mr. John Edwards. Cost, 3,200*l*. Queenstown is said to be looking up: the new Scotch Church there has been just completed; style, Early English, consisting of a nave, chancel, robing-room, and tower and spire at the south-west corner of nave. The enterprising shipping firm of James Scott and Co. are building almost a new town at the west end. In addition to the new square completed some time since, they have built a spacious hotel, facing the Columbine Quay, and are now erecting a row of large houses to the west of the hotel.

The Middleton Park Estate has been thrown open at last to building adventurers, but such are said to be the restrictions imposed upon those disposed to speculate that none have yet ventured to do so. Messrs. Wheeler and Co. ship-builders, are erecting spacious docks adjoining Queenstown, Sir John Rennie, engineer. Mr. Alexander Deane is the contractor.

In Cork, the great tunnel under the Barrack-hill, on the Great Southern and Western line, is completed, and would have been opened for traffic some weeks ago, were it not for the giving way of some arches which carry the Glanmire-road over the line at the southern mouth of the tunnel.

The new terminus on Penrose's-marsh is erecting, from the designs of Sir John Benson; contractor, Mr. John Bignel

On the Blackwall side of the river, a private lunatic asylum is being erected, for Dr. Osborne, from the designs of Mr. William Atkins. The building is of red brick, with limestone dressings. The same gentleman is also superintending improvements at Ryves Castle, for Mr. Franks.

SPOFFORTH CHURCH AND TOPCLIFFE CHURCH.

Concerning the animadversion of "The old Member of the Yorkshire Architectural Society," on the editor's heading to my communication, I shall not offer any remark. As to the chancel, which he considers out of all proportion to the other parts of the building, perhaps I may be allowed to differ with him. Besides, they have so reduced their accommodation, that the rector's and Sir Jos. Ratcliffe's pews fill a great portion of the remaining room between the chancel arch and the rails, and, for want of a better situation, they have placed a fine old monument behind the rector's pew, which is of course very much hid; but I suppose, as the church is not a museum, we may be thankful that it has not shared the fate o many other beautiful specimens in the church. You correspondent complains of want of money, as on reason why the chancel was shortened, which seem to me strange indeed, for the chancel is in the rector' hands; and when the rector receives above 1,500 per annum from the church, he surely would no grudge to keep his portion of the church in repair at least under the circumstances, I think, the libertie which have been taken ought not to have bee allowed. But others managing this restoration, seem to have acted in a like spirit, for the churchwarden (no one caring to prevent them), sold all the lead o the church to defray the expenses with, and no some slates are put on.

I can only reiterate my opinion, that by thi scandalous proceeding they themselves have been th chief losers, for there is an impression in the neigh bourhood, that the church has been thoroughl spoiled, an opinion I myself am far from agreein with; as the church was before in a disgraceful con dition, and many new features speak to the taste an care of their architect, though I cannot help speakin out against some of their measures; and I hope an trust that they will not follow the advice of your co respondent, and root up the only remains of the caster portion of the late chancel.

While on this topic, I may, perhaps, be allowed t make a few remarks on another church, undergoin restoration in this neighbourhood. I allude to Top cliffe, where the rector and churchwarden have eac got his own architect, and (if we may judge fro the work in hand) with good reason on the part o the rector. The chancel mostly stands as yet: wh they are intending to do I cannot say; but I hop if they think of pulling it down, that they will thin again, and repent of such an idea. The body of th church we are too late to put in a plea for, as it is a down, and the old stones, bearing the venerabl marks of many a century, have all got neatly chiselle over, and replaced, and now the wall

> "A modern motley garb incongruous wears,
> Veiling the venerable form of years."

I hope the rector will keep an eye on the old bra there, and see that it is replaced, for some old ston and crosses that have stood on the church for age and should still be allowed to remain on the post th have so long and faithfully held, have been rejecte by the architect, and given to some of the com mittee. Such is the spirit in which this is unde taken! The old tower is down; its window tracer used for through stones on the new walls: all th lead off the church has been sold. About 900*l*. hav been got for it. The body of the church has bee shortened; and whether they are going to make goo the accommodation by a huge gallery to what th church would formerly hold, or leave it short of wh it was before, I cannot tell. M. R. F.

Notices of Books.

Isometrical Drawing. By Robert Scott Burn Books I. and II. W. and R. Chamber London and Edinburgh.

These two Parts form a portion of Messr Chambers's Educational Course, "Drawing an Perspective, in a series of Progressive Lesson with general Instructions;" and may be safel recommended. They contain a number of exam ples for practice.

Handbook for Travellers in Portugal. London: Murray.

In the "Hand-Book for Travellers in Po tugal" we have much more information as t the churches, palaces, and other public build ings, towns, &c. of Portugal, than has t now been collected in one focus. Portug is little known to the sightseer: from wa of common roads, far less of railroads, as we as from want of civilized "provender," trave ling is there anything but a mere jaun flight. A large mass of information h been gathered together, whether from pe sonal experience or by collation from previo sources. Here is a new country for the touri to conquer; and now that Mr. Murray "Spies" have pervaded the land, we may so expect to find it taken full possession of "the enemy." Of the churches of Lisbon, t author gives us an interesting chapter. T Cathedral Sé, or Basilica de Santa Maria, gloomy without being grand: it is a modera sized plain building, with two low weste towers. The whitewashed walls and colum contrast disagreeably with the gilding of t capitals. This is one of the most ancie

edifices in Lisbon. "Sao Vicente de Fora" is the most magnificent church; in its way, of all those in the capital. It entirely eclipses the cathedral. The west front is 100 feet in breadth, 97 to the balustrade, and 147 to the summit of the tower. The interior is 222 feet by 82 feet. The vaulted roof is of black and white marble. S. Antonio da Sé is a moderate-sized modern church, near the cathedral, with handsome fittings, and a number of pictures. S. Engracia is a vast edifice, which never was finished, and it is prophesied never will be. It was designed to constitute the largest rotunda known, with a single altar in the centre. The church of Nossa Senhora da Graça is a lofty cruciform building, without aisles. The Basilica do Coraçao de Jesus, or the Estrella, is the most gorgeous and conspicuous of the Lisbon churches: it is a copy on a reduced scale of St. Peter's, at Rome. The church of S. Roque is very plain externally, but contains the chapel of Sao Joao Baptista, which cost the incredible sum of 14,000,000 crusados, though filling only a moderate-sized recess. It was got up at Rome, and there consecrated by the Pope, and taken to pieces again to be sent to Lisbon. Numerous other Lisbon churches are described in Mr. Murray's very interesting "Hand-Book of Portugal."

VARIORUM.

Mr. Herbert Spencer's trenchant and logical article on "Railway Morals and Railway Policy," originally published in the *Edinburgh Review*, has been reprinted in the "Travellers' Library" of Messrs. Longman and Co. (No. 89), together with as much more matter by other writers, chiefly American, connected with Mr. Spencer's exposure of railway mismanagement and the remedy.——In a tract titled "Bread for the People secured by the skilful Cultivation and efficient Supervision of Estates" (Dalton, Cockspur-street, publisher), Mr. Layton Cooke, land-agent and surveyor, points out that there is abundance of land in England to feed the whole population if skilfully cultivated and particularly by a proper granulation of the soil. He does not appear to specify how, but doubtless either by the adaptation of digging-machines, &c. to the purpose, or by spade cultivation, which that energetic old fellow, William Cobbett, so pressingly urged. As a small spoke in the wheel of progress towards that full expansion of the agricultural branch of our manufactures which we have long and hopefully anticipated, we recommend Mr. Cooke's little tract to notice.——The General Board of Health have issued in a printed form a "Report on the Results of the different Methods of Treatment pursued in Epidemic Cholera in the Provinces throughout England and Scotland in 1854," being supplemental to the Metropolitan Report addressed to the president of the Board by the Treatment Committee of the Medical Council. Though too strictly medical for more detailed notice here, the result is interesting and instructive. Astringents, with opium and ether, appear to have been most successful in the recovery of patients from the cholera, and aperients from the consecutive fever (which it may be noted, however, would probably not have supervened at all, in many cases, but for the injudicious use or continuance of such agents as ether and opium after the crisis of the choleraic stage had been conquered by aid of these most valuable medicines and other astringents besides the opium. That the chief influence of ether and opium, camphorated ether, &c. was attributable to their power to centrifugalize, as it were, the circulation, and withdraw its excess from the bowels, so curing the diarrhœa, while astringents also assisted in stopping it, seems very evident; and hence the consecutive fever, when this centrifugal pendulation of the blood was too violently and rapidly brought about. Cholera, in fact, is a twofold and pendulative disease, of contrary phases, in many cases probably beginning with slight fever).——Bournemouth, as a healthful and favourite watering-place, has found an able illustrator in Mr. Philip Brandon, in "The Illustrated, Historical, and Picturesque Guide to Bournemouth," just published by Messrs. Longman, and at Poole, by Mr. Sydenham. By the way, the new Sanitarium of the Brompton Consumption Hospital at Bournemouth was opened on Tuesday in last week. The "Guide" under notice contains an engraving of it.——Messrs. Blackwood and Sons, of Edinburgh and London, have published a second edition of "Page's "Introductory Text-book on Geology," which we are glad to see fulfilling its earlier promise as one of the very best of the numerous text-books now published for the use of the general reader, and the student of geology.——In No. 4 of the new series of the "Edinburgh New [or very old, rather, and long established] Philosophical Journal" (Black, of Edinburgh, and Longman, of London, publishers) there is an interesting article on the results of the drainage of Haarlem, by M. Gevers D'Endegeest, president of the Drainage Commission, and author of the previous work on this subject. From this article it appears that 16,866 hectares of land have been sold as well as redeemed, and have yielded 8,030,553 florins, a result in itself which has surpassed all expectation, inasmuch as the grand object of the drainage was rather to put an end to the encroachments of the lake than to make a lucrative speculation of it. Of the land, thirty-two hectares are reserved in two different places in the centre of the new Poldar, in order to build villages there. This ground will be sold for thirty cents per square metre, for building houses after a given plan, which, after deduction of ground for streets and squares, will bring in 70,000 florins more. The ultimate profit, however, is not a money one so much as one of general improvement, for the total expense for the works of drainage from 1839 to the 31st of December, 1855, is set down at 3,981,344 florins; but on the whole calculations are given which result in the satisfactory conclusion that as respects outlay the works will have cost the state *nothing*, while the centre of the country has been delivered from an immense lake which was always increasing, and constituted an enemy ever becoming more and more dangerous, and while, moreover, no less than 18,000 hectares of fertile land have been acquired for agriculture in a great centre of population and of capital towns. Two powerful steam-engines are still at work, and must be constantly kept at work, together with a third, about to be formed, and besides the irregular work of 250 windmills, in order to withdraw the ever accumulating water, so as to keep it down to its present level. In fact, it is stated that the two engines at work "have raised from the basin *since* the lake was drained in July, 1852, till the 1st of May, 1855, more than two-thirds of the mass of waters raised from the same basin by the engine at Spaarndam, throughout the period of the whole drainage, or during more than six years. This is attributed to heavy rains during the latter period. The same number of the "Edinburgh Philosophical Journal" also contains some chemical details as to two pigments, Indian Red, and Sienna, burnt and unburnt, besides other valuable articles on electricity, Geology, Botany, &c.——Mr. Mitchell, of Red Lion-court, Fleet-street, London, has issued a practical explanation of the new Limited Liability Act in combination with the Joint Stock Companies' Acts;—written for laymen and men of business, who may happen to be either projectors, promoters, directors of companies, or simply shareholders. It explains, in different sections, the proceedings to be adopted in forming a company under the Limited Liability Act, or applying it to companies already established; and it also especially explains the liabilities of directors, promoters, or shareholders. The author, Mr. Finlason, is a barrister of good standing.——The *Ecclesiologist* of the present month contains an elaborate notice of the Paris Exhibition, and fully confirms our objection to the material arrangement. In stone work, the writer gives the palm to the French, in wood to the English. "In glass-painting it would be difficult to assign the prize; or rather, it would, perhaps, be the fairest to say that the art is in a condition equally hopeless both in France and England!"——In a recently published work, "On the Nature, Treatment, and Prevention of Pulmonary Consumption" (Longman and Co.), Dr. Henry McCormac maintains that for its prevention, or cure if in time, a pure, fresh, untainted atmosphere, *at all hours, times, and places*, is the one single condition, which nothing whatever must interfere with or set aside. He attributes consumption, in all cases in the first instance, to the continued inspiration of impure air. The book shows a large amount of curious reading and a strong conviction. Even if the theory should not be wholly true, the circulation of the essay, by leading to the adoption of properly ventilated bed-chambers especially, would do a great amount of good.

Miscellanea.

The Proposed Washington Monument.—Some time ago we pointed out the questionable character of the proposed monument to Washington, in the national capital. Others are now saying the same thing in that country. One writer, Mr. Jarves, says,—"When the public are deluded, as in the case of the Washington monument at the national capital, into the expenditure of hundreds of thousands of dollars to perpetuate a violation of the first principles of art, it is time that the indignant protest of good taste should be heard all over the land, to spare it a disgrace as lasting as the firm material of which the monument is being constructed. A simple obelisk, as an expression of aspiring thought, is well enough; but to surround its base with Grecian architecture detracts from the dignity of the one and ruins the beauty of the other. Neither is in keeping with the character of Washington. Independent of the object of the monument, the nation, if it be completed according to its present design, will be in possession of the tallest shaft in existence, rising from out of a forest of Lilliputian columns,—I speak in a comparative sense,—much the same as a handle is stuck within the broom at its base. The sole idea in its erection appears to be to build something *higher* than any one else has ever built. Much good may this do us! Our children will be glad, it is to be hoped, to pay a million of money to pitch the monstrosity into the ocean."

Lambeth.—The nest of nuisances, from Lambeth Church, by the river side, up to Vauxhall-bridge, and on to Nine-elms, would be a disgrace to a city of barbarians, and I question very much if such people would allow such places to exist near their dwellings; yet we, forsooth, who boast of being the most civilized nation under the sun, seem to revel in the filth and nastiness of such factories as any person for the sake of gain may choose to plant in our great highways, and thereby poison a whole neighbourhood. Why should any tradesman be permitted to carry on any business in the metropolis which produces stenches and smoke which are disagreeable to his neighbours? The site of these stench factories at Lambeth might be converted into one of the prettiest suburbs of the town, if the whole was cleared from the river back to the railway, and the river front have a grand terrace of houses, and a wide road, planted with trees, next the river. It would also be a great improvement if the footpath next the river, in the front of the Penitentiary, was paved, and a row of trees planted there the whole length.—Improver.

A Coating for Lead wanted.—May I request some of your correspondents to inform me whether there is any description of paint, varnish, or other coating which, if applied to the surface of lead flats, gutters, valleys, &c. on roofs, will have the effect of preventing rain-water from being acted on injuriously by coming into contact with the lead exposed to the sun, air, &c.? I am desirous of obtaining a large supply of rain-water in as pure a state as possible, and it has to pass over a considerable surface of lead on the roof; and I wish, if practicable, to avoid any injurious results.—Belfast.

Prince of Wales-road.—There is a road,—no, there is not a road, but an elongated slough,—which extends from the high Hampstead-road, at the Tailors' Almshouses, for upwards of a quarter of a mile towards the Kentish-town main causeway: it is built throughout on both sides with neat houses, paved for the most part, and yet the drift way is axle-deep in mud. It has been in this state above three years! Often have I seen teams stuck fast therein—coal-waggons frequently—and twice vans loaded with furniture overset: on one occasion mirrors, tables, porcelain, and effects, were broken; and now that rain has set in, the line is wholly impracticable. The occupiers on either side or coast of this broad Acheron (for the lake or slough is 80 feet wide) pay paving and lighting as well as sewage rates—no thanks to them for that, it is compulsory—yet they apprehend that the levy is not legal under the circumstances, and look to the editor of the *Builder* to give an opinion on the matter, if Sir Benjamin Hall will not pull them through the difficulty.

The Oldest Inhabitant.

Condition of the Atmosphere during Cholera.—A paper on this subject, detailing some curious experiments by Dr. R. D. Thomson, was read at the late Glasgow meeting. Without going into the details, suffice it to say these experiments render it sufficiently obvious that organic living bodies constantly surround us in close apartments, and particularly that animal matter, under certain circumstances, is likewise diffused through such atmospheres. They fail to point out any matter capable of communicating cholera from one individual to another through the medium of the air, and, therefore, are so far important to the public; but they show that foreign animal matter injurious to health may speedily be concentrated in certain localities which will undoubtedly assist in the production and propagation of disease in conjunction with meteorological conditions.

St. Pancras and Marylebone Preventive and Reformatory Institution.—The foundation stone of a building, intended as a Preventive and Reformatory Institution for the parishes of St. Pancras and Marylebone, was laid last week, by Lord Robert Grosvenor. The intended institution is to be erected in the rear of the premises in the New-road, near Gower-street, temporarily occupied for the same object, and it is to be constructed from designs furnished by Mr. A. J. Baker, architect. The building will cost 850*l.* of which but 450*l.* are as yet subscribed.

Bell Founding.—Awhile since you did me the honour to insert a brief statement of the geometrical mode of dializing the twelve hours' lapse. I have purposed to bring to your notice the mode of belling the hours' knells so as greatly to increase the probability of ascertaining throughout the circle of resonancy what is struck, though but part be heard. At present I am wishful to put a little question anent bell-casting, as the art seems to be rather asleep among us. Witness the continental trip of Sir C. Barry and Professor Wheatstone to arrive at knowledge thereon. Sir, there are good peals in this country: let them be examined: let their proportionate *capacity* from note to note throughout each peal be ascertained; and then let the comparison of contents of peal with peal be made,—and I venture to prognosticate that this aerial music will be found true to itself in the requisite tumuluses of atmosphere wherewith the tremor of the metal plays being found correlative in all true sounding peals of bells, and that observance of those diatonic capacities in moulding the bell-cores, and rigid precaution that for the same peal a holo-amalgam be cast, will go far to ensure having a set needing little chiselling.—W. W.

Relic of Antiquity.—A Roman sudatory was discovered lately on the Castle-hill, at Lincoln, about 3 feet below the surface. It was composed of five arches, springing from different basements, and conjoining in the centre. The flue was discovered near the base of one of the arches. After a drawing had been taken, the entire relic was destroyed.

Scarcity of Labour in Wales.—Owing to railway, dock, and other extensions in South Wales, says the *Bristol Mirror*, the labour market is very inefficiently supplied. During the summer, wages have been exceedingly high, and at the present are from 25 to 30 per cent. above ordinary prices. In Pembrokeshire, where the contractors for the Government works now in progress take on all the hands they can get, common labourers are realizing 3s. 6d. while blacksmiths range from 5s. to 6s. a day. The wages of the men employed in the construction of the Briton Ferry Docks, have been increased to 3s. 4d. solely from difficulty in securing a sufficient number of hands. In the hill and colliery districts no man need be out of employment, for good workmen readily find occupation.

Iron Plate-cutting Machine.—A new machine for cutting iron plates has been made in the yard of Mr. Caldwell, engineer, Glasgow. It weighs between six and seven tons. The action of cutting the plates is said to be exceedingly simple. The machine can cut plates varying in thickness from $\frac{1}{8}$ths of an inch to the thinnest made, and 7$\frac{1}{2}$ feet in length. One of the blades is stationary, the other circular, and fixed to a wheel and pinion, and can be driven either by the hand or by any other power. It is expected to supersede the present tedious method of boring and chipping the edges of plates used in ship-building, as it can cut the plates at any angle, and with a straight edge. The invention is American, but the patent, it is said, has already been secured for Britain. There is a machine of this kind in operation in one of the Government dockyards.

Drainage of Oxford.—It may be of some public utility to point out, through the medium of your journal, the necessity which exists for applying an efficient system of drainage to the university and city of Oxford; and that, notwithstanding the large resources of the university, and the great amount of illness prevalent here during last year, this desideratum still remains in abeyance.—Hygeia.

Proposed Cemetery at Isleworth.—It is proposed to establish a cemetery at Park-hill, near Isleworth, under the new Act affording limited liability. The lands, extending to about fifty acres, can be obtained, it appears, by the directors at a price which, according to estimate and plans, will admit of their being drained, enclosed, and fully completed, with chapels and every proper convenience, for a sum under 50,000*l.* the soil being sand and gravel. The capital of the Company is fixed at 50,000*l.* in 10*l.* shares, with a deposit of 2*l.* per share. Each original holder of twenty shares and upwards, is to have right to free space for a vault, and each holder of not less than five shares to space for one free grave. Sheriff Rose is one of the trustees, and Alderman Wire one of the directors.

Birkenhead Dock Works.—At a recent meeting of the Liverpool Dock Committee, a report from Mr. J. B. Hartley was read, which stated that he proposed to construct, in the first instance, an open basin of about 4$\frac{1}{2}$ acres area; and opening from this in the line of its direction, three locks of the various widths of 50 feet, 28 feet, and 80 feet. The entrance-locks are intended to open into an intermediate dock of about 8$\frac{1}{2}$ acres area. Between this dock and the pool there will be a 50-feet and a 28-feet lock of similar size to those opening from the river, and a passage 80 feet in width. The report enters into various details for providing accommodation and carrying out the works. The design provides a double river entrance, having openings 70 feet and 60 feet in width, giving access to a half-tide basin 5$\frac{1}{2}$ acres in area: from this open two docks of a long and narrow character, of the respective areas of 6$\frac{1}{2}$ and 7$\frac{1}{2}$ acres; the former, or north dock, being distinct in itself, the latter joining to and forming an enlargement of the present Egerton Dock. In connection with this half-tide basin, Mr. Hartley has laid down the design for four graving docks. He estimated that the cost of the works for the No. 1 plan, submitted by him, would be 1,055,000*l.* and for the No. 2 plan to 1,078,000*l.* The consideration of the report and plans was referred to the Works Sub-committee.

Christ Church, North Brixton.—This church was consecrated last week. Under the directions of Mr. V. Arnold, the whole work has been carried out by Messrs. Haward and Nixon, of Lambeth. The ceiling is decorated with white and gold, and the galleries are supported by iron pillars in imitation of marble. Over the altar are three stained-glass windows, painted by Messrs. Gibbs, of the New-road.

St. Paul's Cathedral.—Upon attending St. Paul's Cathedral on Monday, I was struck with the present unsightly appearance of the west side of its fine organ. An alteration has been made in the organ-gallery, supported by eight marble columns: the front facing the west, with Latin inscription upon it, has been taken down, and the present unsightly work put up to enable the organist to play on that side.—P.

The Iron Trade.—At the quarterly meetings, held at Wolverhampton, Birmingham, Stourbridge, and Dudley, attempts were made to force up the nominal prices the threatened 40s. a ton, but no further advance than the 20s. already agreed to was recognised.

The Whitechapel Competition.—The extraordinary advertisement inserted by the Whitechapel Board was responded to by a certain number of applicants, who must have felt themselves in a very wrong position when waiting to be called in to "bid." It appears that six have been selected to be treated with by the guardians.

Birmingham Architectural Society.—The session of the Birmingham Architectural Society was opened last week, by an address from the president, Mr. J. W. Hornblower, in which he traced the origin, progress, and usefulness of kindred societies on the Continent. Allusion was also made in the address to the position of the Birmingham Society, on the success and prospects of which the president congratulated the members. Mr. John H. Chamberlain, architect, was elected a Fellow. The secretary, Mr. J. R. Botham, made a very favourable report of the financial position of the society.

Who will explain?—Tenders for constructing the roads on the Temperance Permanent Land and Building Society's estate, at Stratford, Essex; Mr. William Ellison, surveyor:—

Geo. Boys	£1,017	0	0
C. Hawkes	650	0	0
J. Bunn	550	0	0
King and Mills	475	0	0
J. Ellis	458	10	0
P. Pound	426	0	0
Jas Stemp	325	15	0
E. Hughes	315	10	0
G. Rogers	295	0	0
J. Manning	274	10	0
W. Davis (accepted)	245	0	0
T. Gardiner	230	0	0

Smoke from Iron Works and Brick Ovens.—In reply to the paragraph thus headed last week, three or four patentees have written to us, simply undertaking to consume the smoke in such cases, if employed. One adds that he has "erected above fifty brick ovens within the last few years, in all of which the smoke can be thoroughly consumed."

Stained Glass at All Saints' Church, Kensington-park.—We should have mentioned that the glass in this church (illustrated last week), and which has a feature of novelty, was executed by Lavers, of Southampton-street, Strand, from the designs of the architect.

Street Pitching.—The *Bristol Times* describes a method of street pitching proposed by a Mr. Hoskings, and which consists of iron framework, diamonded and cast in square yards, to be so set in the streets. The diamond-shaped hollows between the bars (the bars to be about 6 inches deep, half-inch thick at top, and about three-quarters at bottom, the better to hold in the ground), he proposes to be filled up either with concrete or blocks of wood, about 4$\frac{1}{2}$ inches square, this being the space between the bars, which, by being grooved, are intended thus to furnish a secure footing for horses. The expense of laying this pitching would be about 2*l.* the square yard.

Patent Bricks.—A form of bricks for drainage, sewering, culverts, and other purposes, has been patented, which, instead of showing a plain surface on each joint, presents a small goggle, or toothing, upon each bed, which butts upon the actual joint, and thus, by covering the joint itself, the interstice is met by a resisting face. In circular work, either for shafts or sewers, the joints are radiated upon the same principle. The patent is taken out by Mr. Samuel Monk, Engineer, Smethwick.

New Plan of Hereford.—We are told that a plan of Hereford has been made by Mr. Curley, of that city, and that it is "the only plan of a town for which an independent trigonometrical survey, computed from the meridian, has been made by any civil engineer." A base line was measured on the meadow opposite the Bishop's Palace, on the south side of the river, that being a place well adapted for this purpose from the evenness of the ground. From the extreme ends of this base angles were taken, with a theodolite, to all prominent and well-defined objects on the opposite side of the river, such as church steeples, weather-cocks, station poles placed at certain places, &c. The theodolite was then removed to all accessible stations on the opposite side of the river, and angles taken to all the former objects, and also to new stations, and bolts placed in the streets; this operation being repeated from every station in the streets, &c. The whole area to be surveyed was by this means triangulated, and the distance from one object to another computed without any actual measurement except the base line already alluded to. There were still several stations in the streets that could not be observed, in consequence of buildings intervening: these stations had to be computed, and their respective positions determined by "traverse," an operation which was performed by running the working meridian from St. Nicholas's-square across Wye-bridge to Blackmarston. Its position was determined from the base line. From this meridian the traverse commenced, and from every station that had to be traversed, a round of angles was taken to all the visible objects that had been fixed trigonometrically.

The amount required, from 1,000*l.* to 1,500*l.*; to any person seeking a business, the above offers a very advantageous opportunity as such security and low situation will be found a most desirable and eligible one for entering. None but principals or their solicitors will be treated with. For particulars, apply to A. B. care of Chas. Cooke, esq. 19, Gray's-inn square.

A CTIVE PARTNERSHIP WANTED, with an Architect of establ hed practice, in town or country. A premium given, if necessary; but it must be considered that the advertiser is fully qualified to take an active part in the business. References given and required.—Address, J. H. care of Mr Wheeler, Exc ange-arcade, Manchester.

TO ARCHITECTS, SURVEYORS, BUILDERS, AND HOUSE AGENTS.

A PARTNERSHIP.—A Gentleman, who has had considerable experience as an Architect and Surveyor, and who has a small capital at his command, is desirous of meeting with a party or parties in good practice, with whom he could remain a short a period as Clerk, previous to making a final arrangement. Ref rences unexceptionable.—Address, E. W. T. Office of "The Builder."

TO TIMBER MERCHANTS and OTHERS. The Proprietors of Lett's Wharf, Commercial-road, Lambeth, offer the most convenient Wharf for landing all sorts of English Timber, &c. Spacious Dry and Drawing Docks 30 and 16 feet Cranes, sawpits for converting Timber, &c. Freights paid on delivery.—Apply to G. NORES and Co. as above.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

This Paint possesses in an eminent degree the following advantages over all other known Pigments:—
INDESTRUCTIBILITY BY HEAT—PRESERVATION OF IRON FROM OXIDATION. WOOD FROM DECAY, AND MASONRY AND BRICKWORK FROM DAMPNESS—PERMANENCE OF COLOUR AND FREEDOM FROM DELETERIOUS PROPERTIES—SUPERIORITY OF BODY.

The Protoxide Paint, as at present produced, is of one shade of colour, viz.:—a pale drab, but it may be tinted with any other colour to suit the taste and purpose for which it may be required. It is not affected by sulphuretted or carburetted hydrogen gas, bilge water, or indeed foul air of any kind, and is therefore well adapted for the interior of Ships, Warehouses, Offices, Stabling, &c.; and from its total freedom from deleterious properties, it will be found of great value for painting the interior of Hospitals, Asylums, Unions, Gaols, and other Buildings which may require to be painted during occupation.—Sole authorized Agents for England

MESSRS. C. GRABHAM AND CO. 4, BARGE-YARD, BUCKLERSBURY, LONDON.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.

Prepared only by W. J. STENT, Westminster.

London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 48, Mary-street, Dublin.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be entirely avoided. The Powdered White Zinc may be had for grinding in oil; also for Plaster Precipitations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped—HUBBUCK—LONDON—PATENT. And if not so marked, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has cut and CLOSED his Establishment on the Surrey side of the Thames, and that Articles of his manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Praed-street, Paddington

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extra tenacity, cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which, its emulent hydraulic properties stamp it at once as the first Cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The reputation constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS' STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London. March 20, 1855. CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT. Messrs ROBINS and CO. with much pleasure announce their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very finest PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

TATHAM & CO.—No. 14, SOUTH WHARF, PADDINGTON,
BRICK, LIME, and CEMENT MERCHANTS,
SOUTHAM BLUE LIAS LIME DEPOT.

Bath, Portland, Lias, and Roman Cements; Parian and Keene's Cements, Plaster of Paris, Glazed Stoneware Sewage Pipes, Fire Goods, Vitrified Blue Bricks, White Building Bricks, White Enamelled Pans and Traps, and every description of Building Material.

N.B. Lump and Ground BLUE LIAS LIME delivered in boat-loads direct from the Works in Warwickshire, to any part of the river or canal.

SOUTHAM BLUE LIAS LIME DEPOT,
No. 14, SOUTH WHARF, PADDINGTON.

TATHAM & CO. have arranged for a constant supply of the above very superior BLUE LIAS LIME, which, for the last two years has been extensively used at most of the large works constructed during that period or now in hand, and many orders they are favoured with while manufactured for retention.

Boatloads of either Lump or Ground Lime can be delivered direct from the Works in WARWICKSHIRE to any part of the Rivers Thames or Lee, alongside any wharf on canal, or by boat or rail to any part of the kingdom.

PORTLAND CEMENT.—TATHAM & CO. are enabled to offer a very superior quality of this valuable Cement at a moderate price, and all orders addressed to
No. 14, SOUTH WHARF, PADDINGTON,
will receive the best and most prompt attention.

NOTICE.—BLUE LIAS LIME.—L. B. PEARSE and CO. beg to inform Architects, Engineers, Builders, and Contractors generally, that they have now accepted the AGENCY for the above valuable HYDRAULIC LIME, from the original quarries, Stockton, Warwickshire, and are now supplying direct from the works in their own boats, at a reduced rate.

L. B. PEARSE and CO. beg further to give notice to consumers, that they have erected, at a considerable expense, large buildings and machinery for grinding lime and cement, so as to ensure genuine quality and large supply, at their extensive premises, situate on the Great Northern Railway, York-road, Kings-cross.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first class quality, for the home and foreign trade. Portland cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers; to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on applicat on, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

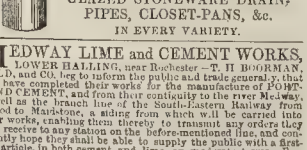
CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by G. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied or shipment, on advantageous terms.

NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Establishments, &c. will not twist, warp, or give after set, but will retain its hardness and sharpness.

Superfine, per ton	£7 0 0
Fine	3 0 0
Course	2 10 0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis.

D. George-yard, Lombard-street, City.



ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

TO BUILDERS, CONTRACTORS, SHIPPERS, and Others.

G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland yard, Westminster

DAVIES and NORMAN, Agents.

Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c of superior quality, and at reasonable prices.

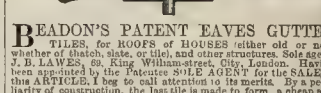
GLAZED STONEWARE DRAIN, PIPES, CLOSET-PANS, &c.
IN EVERY VARIETY.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.—T. H. BOORMAN, WILD, and CO. beg to inform the public and trade that they have completed their works for the manufacture of PORTLAND CEMENT, and from their contiguity to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, a siding from which will be carried into their works, enabling them thereby to transmit any orders they may receive to any station on the before-mentioned line, and confidently hope they shall be able to supply the public with a first-rate article, in both cement and lime, on moderate terms. Persons sending orders for cement, are respectfully requested to say for what purpose it is required, and printed instructions will be affixed to the head of each cask.—Orders to be addressed to Mr. THOMAS WEEKES, Agent at the Works.

Agents in London: Messrs. GEORGE POTTER and CO. Lime Merchants, Purfleet Wharf, Blackfriars; and 19, North Wharf-road, Paddington.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known Hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour, resembling the Bath stone.—CHARLES RICHARDSON, 6 South Wharf, Paddington.



GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH perfectly NON-ABSORBENT (no quantity of rain having any effect upon it), and will not VEGETATE or RUB OFF. Stucco Cement and Stucco Paint. CLARK and BENGOUGH, Manufacturers.—Office, 4, George-yard, Lombard-street. Works, Grand Surrey Canal Bridge, Old Kent-road.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "Terro-Metallic," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 331, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES either old or new, whether of thatch, slate, or tile, and other structures. Sole agent, J. B. LAWES, 69, King William-street, City, London. Having been appointed by the Patentee SOLE AGENT for the SALE of the ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses in a cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Hevetoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 8d.

THE KINSON CLAY-WORKS POTTERIES, and FIRE-BRICK ESTABLISHMENT, near Poole, Dorset, Manufacturers of every description of Sanitary Glazed Sewage-pipes, Closet pans, Furnace-blocks, Fire bricks, Saggers, Crucibles, &c. &c.—The completion of the Kinson Pottery places the Proprietors in a position to supply Builders and the Trade generally with any quantities of the above description of Articles on the shortest notice. The pottery is situate about a mile and a half from the town and port of Poole. It is worked by steam-power, and the pipes are made by the most approved patent machinery, and will bear favourable comparison with any manufactured in the kingdom. The fire-bricks have been tested, and are found fully equal in all respects to those manufactured at Stourbridge and Newcastle. All articles are made from the clays and materials found on the estate. There is an inexhaustible quantity of all descriptions of Dorsetshire Clay, used for pottery purposes, which can be supplied to the Staffordshire, North Country, and London markets, up n favourable terms.

Lists of prices and all other information will be furnished, upon application to Mr. T. W. GREEN, at the Works.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B PEARSE and CO. Brick, Tile, Lime, and Cement Merchants. Builders, contractors, and others supplied with every description of building material at the lowest market prices.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.—Grey stocks, 25s. per thousand; Grizzles, 29s. per thousand; Rough Stocks, 30s.; Place, 18s.—Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Pavors, and Puckings, of good and sound quality, constantly on hand, at H. DODD'S Brick fields, which are only a quarter of an hour's walk from the City. H. D earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

THE BEST HERTFORDSHIRE MALM SECONDS;
THE BEST WHITE SUFFOLK and RED FACINGS:
DEEP-RED RUBBING BRICKS.
Also COWLEY and KENT STOCKS, in any quantity.
J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY
(Within a short distance of the five bridges).
THE BEST MALM-CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity.
Also, STOCKS, OF FINEST QUALITY.
J. EASTWOOD and SONS, Belvidere-road, Lambeth.

WHITE SUFFOLK and RED FACING BRICKS
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.
KENTISH RAG-STONE of the FINEST QUALITY.
MILLS and PRICE, 3, ADELAIDE-PLACE, London-bridge.

PRIZE BRICK-MAKING MACHINE.—CHAMBERLAIN'S PATENT.—This portable machine will make 20,000 solid bricks per day, with 3-horse power. One man to feed the machine with clay, and boys to remove the bricks. Was awarded a silver medal by the Liverpool and Manchester Agricultural Society, at St. Helen's, September 6th; a silver medal by the Staffordshire Society at Leek, September 27th; and a prize at Worcester, October 5th, 1855. Apply for particulars to Mr HUMPHREY CHAMBERLAIN, Kempsey, Worcester.

Depôt, Agar Wharf, King's-road, St. Pancras.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c. Staffordshire Fire Goods, &c. of all descriptions, and of best quality.—WOOD and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent — Mr. J. UNWIN, Private Residence, 59 Nelson-square, Blackfriars-road.

BRICKS, LIME, WHITING, TILES, FLINTS, GRAVEL, &c.—Messrs. MEESON and CO. supply stocks, pickmes, rough stocks, place, red kiln bricks, paviors, &c. &c on low terms, to any part of the Thames, the various canals, the River Lea, &c. or by rail to any station on the Eastern Counties line, or any railway connected with it. Also flints for building boundary walls, stables, cottages, &c. by wine which one-third of the expense may be saved. Also, lime, chalk, chalk rubbish, gravel, loam for foundries, &c. &c. Whiting of the best quality, lime, both white and flare, bricks, pre go ds. &c can be obtained at Messrs. MEESON'S Wharf Kilns at Bow-bridge, Stratford, Essex; or from the Works at Gray's, Essex.—Orders by letter, to Messrs. MEESON and CO. Gray's, Essex, executed with despatch.

TO BRICKMAKERS.

CLAY GROUND and STOCK BRICKS made at one and the same time, with ease, by one horse, at the rate of from eight to ten bricks the minute. Price of machine at Hull 35l. Reference given and particulars forwarded.—Apply to W. HODSON, Patentee, Kingston-square, Assembly Rooms, Hull. Agents wanted for the several counties in England. A liberal per-centage allowed. Reference given and expected as to respectability.

TO FARMERS, BRICKMAKERS, and OTHERS.—TO BE SOLD, 20,000 CHALDRONS of ASHES and BREESE; also, a quantity of good Mixture and Horse dung, close adjoining the Ponsonby Canal and Great Northern Railway, can be taken away by boats and barges, or delivered in carts.—For further particulars, inquire of Mr. GEORGE TILLEY, Saint George's-wharf, Cambridge-street, Agar-town.

TO THE COMMISSIONERS OF THE BOARD OF HEALTH, AND TO ALL PERSONS INTERESTED IN THE SMOKE QUESTION.

HANDS'S PATENT is the only simple and certain remedy for the REMOVAL of the SMOKE NUISANCE. It has comb ned, when necessary, the advantages of a drying process without a particle of complicated machinery.—Address to Mr. J. HANDS, Epsom.

TO CAPITALISTS, POTTERS, CHINA, BRICK, AND TILE MAKERS, AND LANDOWNERS NEAR RAILWAY STATIONS.

HANDS'S great economising PATENT KILN.—Capitalists, and persons engaged in the above works, owners of land near railway stations, containing any description of pottery, china, brick, or other valuable earth, are particularly invited to look at HANDS'S great economising PATENT KILN; from its peculiar construction it enables persons to build one on any suitable spot where they may please, so to economise the heat, that all that great waste and extra expense looked for as a matter of course in the old system, is completely avoided, by causing the heat to dry sand, and every description of strong moulded clays, AT ANY SEASON, in time of burning and cooling the kiln, with perfect soundness. It is also ensured to keep up the works all the year round, beyond the consumption of about six or seven tons of coal, to burn 6l 20,000 goods in each kiln. Any person desirous of availing himself of the opportunity for a district, incense or otherwise, may apply, if by letter, pre paid, to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom, Surrey, where the kiln is to be seen, by appointment only.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 35s. per 1,000; 9-inch pavings, at 37s. 6d. per 1,000; 8-inch pavings, at 27s 6d, per 1,000; 9-inch pavings, at 22s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactures of Majolica, Parian, Statuary, and Encaustic, and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Copings for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had in great variety at their Warehouse, 2, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent Staffordshire.

GROUND FLINT
AND CORNISH STONE, UNADULTERATED,
Manufactured by MACHINERY, which produces the greatest degree of fineness.
WILCOX & CO.
Flint Mills, Mollrail, near Scott Russell's.
CARRIAGE FREE.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 240, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, and Co.), Caen-wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to supply from their Wharf, as above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE.

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal-road, Kingscross, London, continue to supply the trade with all descriptions of Marble, in Block and Slab, at the lowest prices.—N.B. A good stock of Statuary Slab on hand, suitable for shelves.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terrace at the Crystal Palace.—Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

GRANITE.—The Checsewring Granite Company, Liskeard, Cornwall.
London Agents.—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager.—JAS. J. TRATHAN, Liskeard. This Granite is selected for the New Westminster-bridge.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

ANCASTER STONE, *not* from Ancaster.—In consequence of an invidious and very silly advertisement inserted in this paper the week before last, I am desirous to make the following statement:—

"HAYDOR" is the lordship in which the original and, I believe, very ancient Quarries now the estate of John Archer Houblon, esq.) from which the so-called "ANCASTER STONE" was procured, which has stood the test of 500 years, as is truly stated by Mr John Wilson, but these Quarries have been for some time past worked out.

"HAYDOR," in the opinion of eminent geologists, is the place from which the stone of Tattershall Castle and other elaborate buildings in this district, so remarkable for their durability, was obtained.

"HAYDOR" is the lordship in which I (as lessee upon the above estate) have opened a Quarry nearly opposite to and adjoining the same road as the Ancaster Quarry.

"WILSFORD" is the lordship in which Mr. John Wilson's Quarry is situated and which nearly adjoins the present Haydor Quarries, but is further removed from the ancient Quarries than my own; Mr. John Wilson can, therefore, upon his argument, have no pretension to call his "ANCASTER STONE," whilst upon his authority I have a right to do so.

It is presumed that Mr John Wilson, as tenant of the ancient Haydor Quarries now works, out of necessity, and being at the same time tenant of the WILSFORD QUARRIES, thinks himself entitled exclusively to appropriate the name by which the former were known, to the Wilsford Quarry, and to call the latter "The Ancaster Quarries."

To guard against Mr. John Wilson's stone being mistaken for mine, which I have been and still am most anxious to do, my blocks are invariably marked with T; and if Mr. John Wilson will add me in this distinction by marking his with W I shall feel greatly obliged to him, and in this case it will serve both to mark the Quarry and the occupier (Wilsford or Wilson), or he can adopt the double W. If he thinks it more appropriate.

Practical men of great experience have given their opinion that the stone from my Quarry is unequalled in its working and other advantageous qualities by any other stone denominated "Ancaster Stone," and it is the opinion of experienced quarrymen, that the appearance of the rock promises greater advantages than any Quarry before opened.

The opening of my Quarry had the effect of breaking up a mischievous monopoly, purchasers having formerly to pay monthly; and in case of their success-ful competition with Mr. John Wilson, a supply of the material was refused to them. Equal advantages can now be had by all Building Competitors, and Architects will be saved the trouble, and their employers the serious disadvantages of altering their arrangement after works are let. If architects are guided by Mr. John Wilson's suggestion in "The Builder," to state in their specifications that "Wilson's stone is only to be used," the monopoly will be secured

I have supplied a very considerable quantity of stone from my Quarry, opened for sale to the public last April, and have now a stock on hand of equal, if not superior, quality, to any other offered under the name of Ancaster Stone."

WILLIAM THOMPSON, Architect and Surveyor.
Elmer-street, Grantham, Oct. 17, 1855.

P.S.—What is the meaning of "Original Lessee?"—and is Mr. John Wilson really the bona fide tenant of the Wilsford Quarry, or merely the nominal occupier?

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.
THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Peonia, Veral Antique, Brocatella, Dove, Sienna, and Serpentine Marbles, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Giano, Emperor's Red and Asiatic Marble, for Boudoirs, Bedroom Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Chimney Wood, &c., in the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Cresent terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account, Mr. Thompson being no longer his agent.

Mr. B Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better a vantage and quality than any one else.

N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

MARBLE.—The Italian Marble Company, Importers of the produce of their many quarries in the province of Massa Carrara, Italy, beg to announce to the marble trade in the United Kingdom that they are prepared to undertake Contracts for any quantity of Statuary, Veined, Sicilian, Bardilla, Sienna, and other Marbles in blocks of all dimensions, delivered on shipboard at Leghorn, or in dock, London.—A constant stock is always kept at the London Depôt. Orders for Paving Slabs, Garden and Hall Slabbing, Vases, Vazzas, Consoles, &c. executed and delivered at reasonable rates.—For further particulars apply at the Offices of the Company, 18, Cannon-street, City.
WILLIAM W. BONNIN, London Secretary.

MARBLE and STONE CHIMNEY-PIECES.—WM. HUSTLER, Marble and Stone Sawing Mills, Cambridge-heath, Hackney, begs to call the attention of the Trade to his STOCK of CHIMNEY-PIECES, suited to all classes. W. H. has enlarged his workshops and improved his machinery, so as not only to compete, but is able to sell lower than any other house in the trade.

N.B. Good marble mason and polishers wanted.

THE LONDON and PENZANCE SERPENTINE COMPANY having just opened an extensive SHOWROOM, at No. 18 Wharf, Macclesfield-street North, City-road, for the sale of CHIMNEY-PIECES, and other articles, useful, architectural, and ornamental, invite Architects, Builders, and the trade generally, to inspect the same. A large assortment of Chimney-mantles are also always on sale at the Company's Stall in the Mineral Manufactures Court, in the Crystal Palace, Sydenham. Estimates given, and orders promptly executed.
C. ADENEY, Secretary.
July 25, 1855.

BENJAMIN GILL, 7 Wharf, New Basin, Leeds, Yorkshire, STONE MERCHANT in all its branches. Worked orders, &c. executed to any plan. Single truckloads or cargoes sent to any place or port in the kingdom. Prices, &c. supplied on application at the above address. Charges moderate.

WILLIAM S. LAWRENCE, PENNANT STONE MERCHANT, Stapleton. Office—10, Merchant-street, Bristol. All descriptions of Steps, Landings, Troughs, Combs, Curb, Ashlar, Paving, &c., &c. on Sale at Stone Quarries and Yards at Stapleton, and at Conham, on Banks of River Avon near Bristol.

THOMAS TILNEY, YORKSHIRE STONE MERCHANT, Tanfield-place, Leeds.—To Builders and Buyers of the Best Quality.—Direct from the Quarries in truckloads of five tons. Pavings, Landings got out to sizes, Steps, Copings, &c. &c. supplied on most advantageous terms by railway, and with despatch. Prices sent on application.

PIMLICO MARBLE WORKS,
BELGRAVE-WHARF,
LOWER BELGRAVE-PLACE.
SAMUEL CUNDY.
THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL.
PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

YORKSHIRE STONE.

GEO. VINT and BROTHERS beg respectfully to inform Architects, Surveyors, Contractors, Builders, and Masons, that they can supply to any extent all kinds of YORK STONE, including Paving, Bramley Fall, Park Spring, &c of the very best quality, direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms.

GEO. VINT and BROTHERS will gladly forward prices by post on application.—Address, Idle, near Leeds.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. STEELE and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS,
MILLBANK-STREET, WESTMINSTER.
Marble of all kinds and of best quality, in block and slab, Marble mortars, &c.

TO MASONS, BUILDERS, &c.

TO BE SOLD, cheap, a Quantity of SINKS, 24 inch tooled Paving, self-faced ditto, 18 and 6 inch Landings, Aberdeen Curb, 12 by 8.—Apply to GEORGE BOOTH, 11, George-yard, Lombard-street.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prisons, Penitentiaries, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

LLANGOLLEN FLAG and SLATE COMPANY.—The present proprietors of the Quarries, formerly worked separately by the Llangollen Flag Stone Company and the Llantysilio Slate Company, are now prepared to supply Builders, contractors, slate merchants, builders, and others with FLAGS, SLATES, and SLABS of every description: Cisterns, Chimney pieces, Baths, Filters, Larders, Mangers, Ridging, and every other article made of this beautiful material, all of superior quality. The Llangollen Slabs, from their great durability, and the extraordinary size in which they can be obtained, are peculiarly adapted for the paving of railway stations, malthouses, breweries, conservatories, warehouses, &c. A cheap variety of self-faced flags for street paving, &c. can be supplied at very moderate prices. Prices and further particulars can be had upon application to Messrs. JOHN TAYLOR and SONS, 6, Queen-street-place, Upper Thames-street; Mr. S. VENABLES, at the Company's Premises, 4 Wharf, South Wharf-road, Paddington; or to Mr GEORGE P. DYKE, at the Works of the Company, Pentrefelin Wharf, Llangollen.

TO BUILDERS and Others in Town or Country.—For PRICES of BANGOR SLATES, apply to SCOLES and WOOD, Market Wharf, Regent's park.

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c.

ENAMELLED SLATE CHIMNEY-PIECES of elegant designs and superior workmanship, in great variety, at prices from 21s. to 10 guineas. Slate Cisterns made to any size. J. HOWELL, Manufacturer, 5, Cook's-grounds, King's-road, Chelsea, Middlesex.

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the sizes of a large and increased diversity of the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 30 and 40, Upper Belgrave place, Pimlico.

BANGOR SLATES, of all sorts and sizes; SLABS of all dimensions, and of superior quality.—For prices and particulars, apply to EASTWOOD and SONS, Surrey Canal-bridge, Old Kent-road.—Export orders supplied promptly.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.
Apply to JOHN PILKINGTON, POLONCEAUS BITUMEN, PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.
N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for concrete Bridges and Arches.

SCAGLIOLA done on an IMPROVED PRINCIPLE.—I refer to the Gothic Arch by D. Dolan in the Great Exhibition of 1851, which gained the only Prize Medal awarded for the manufacture of the above work. Specimens to be seen at 192, Drury-lane, two doors from Holborn, superior to any yet offered to the public, with a choice Collection of Ornaments for building purposes, Trusses for Shop-fronts, &c. &c.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

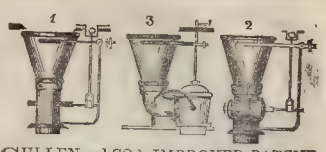
PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.



HENRY J. UNDERWOOD, Architect.
R. S. HOGGARD, Engineer.

Royal Arsenal, Woolwich, June 24, 1853.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

CULLEN and CO.'s IMPROVED PATENT WATER-CLOSETS are the only perfectly air-tight valve closets yet in use, which will last for years without repair. No cranks, wires, or joints required; each fixed part can be cleaned by a servant without derangement. Prices, 15, 21s. 30s. and upwards. Discount to the trade. Also, steam engines and all kinds of machinery, and iron work to order, at low prices.—CULLEN and CO. Engineers, Castle Ironworks, 16, Castle-street, Southwark-bridge-road.

SUPERIOR STONEWARE GLAZED PIPES of a quality not to be surpassed.—E. and W. STURGE respectfully invite attention to the very superior character of their stone pipes which they are enabled at present to make such as must give great satisfaction.—The price being also lower than many in the trade, viz. 5 per cent. discount off the list for cash. Junction Bends, &c. Pans and Traps of the first quality. Yorkshire Paving, Sinks, Sills, &c. all at low cash prices.—E. and W. STURGE, Bridge Wharf, City-road.

N.B. A small extra charge is made upon goods required to be delivered.—October 1, 1855.

UNDERHAY'S PATENT REGULATOR CLOSETS for constant or intermittent supply, dispenser with Cisterns, Service Boxes, Valves, Levers, Cranks, Levers &c. &c.; much time is saved in fixing, and a better flush of water obtained in use.

Pan, Valve, Self-acting, and Servants' Closets, on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed. 5,000 of them have been sold, and I am not aware of a single instance of failure has occurred.

These Steel-valves are cheaper, stronger, and more ornamental, than any other. Many thousands are in use, and greatly approved of.

Manufactured by
CHARLES BETTEN and SON,
Brass Founders, Crawford passage, Clerkenwell, London.

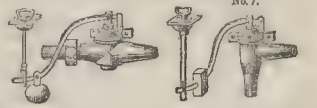
SUPERIOR GLAZED STONEWARE DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipe and socket, the fitting being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and renders the pipes in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street.—Millwood and Co.'s Wharf, Kensington Road, and Green Wharf, Hammersmith.—J. Corbet's Depôt, Britten-street, Chelsea: and at the Pottery.



VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONEWARE PIPES in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, so, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE, No. 7.

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 1st to 200 feet: they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the patentees,

THOS. LAMBERT and SON,
Brass Founders and Enamelers,
Corner of Short-street, New Cut, Lambeth.

N.B. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price, complete, 13s. 6d. each.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS. This ware, allowed by all to be of the best manufacture, by the unparalleled quality, combined with cheapness, will be found to meet the approbation of consumers. Sole Agents, L. B. PEARSE and CO. Great Northern wharf, York-road, King's-cross.

These valuable Horses have been selected with great care and judgement by Mr Brown, who spared neither expense nor trouble in raising one of the best studs in the North of England, having purchased them from some of the most celebrated breeders in the neighbourhood. Amongst them will be found sons of the "Doddington" and "Derwent" Lads; the "Wallaces" also, and other noted sires, have their progeny amongst them. The whole are in excellent working condition, clean-legged, strong bone, and high action and the Auctioneer can with confidence recommend them to the public as being honest good workers, and cannot fail of giving satisfaction to the purchasers. The lots will be on the premises in the stables between Ten and Twelve on the Morning of sale.

Luncheon at TWELVE, and Sale to commence at ONE o'clock precisely.

Bishopwearmouth Sale and Appraising Offices, 51, Sans-street, 26th September, 1855.

BOARD of TRADE DEPARTMENT of SCIENCE and ART.—INSTRUCTION in ART.—TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL-MALL, LONDON.

Art-Superintendent—RICHARD REDGRAVE, Esq R.A.
Head-Master—R. BURCHETT, Esq

The Course of Instruction pursued in the School have for their object the systematic training of teachers, male and female, in the practice of art and in the knowledge of its scientific principles, with the view of qualifying them to impart to others a careful Art-education, to develope its relation to the requirements of trade and manufacture, and its application to the common uses of life. Special courses are arranged in order to qualify School-masters of Parochial and other Schools to teach Elementary Drawing as a part of General Education concurrently with Writing.

The Instruction comprehends the following subjects:—Free-hand, Arch tectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera and Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, objects of Still-life, &c. the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art. Also, Classes for instruction in the technical processes of China and Enamel Painting, Drawing and Engraving on Wood and Lithography in Chalk and Colour. The two last classes for female students only.

Hours of Study—Morning, TEN to THREE; Evening, SEVEN to NINE, daily, except Saturdays. Fees 4l. per session, or part of the session. For Evening Classes only 1l. per session.

The Class for Practical Geometry and Perspective, or that for Moulding and Casting, may be attended separately on payment of a fee of 1l. per session.

Students have full access to the valuable collections of the museum and library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students not in training, is at 37, Gower-street, Bedford-square. Superintendent, Mrs. Mitan. Fees per session,—Advanced Class, 2l. and 4l.; Elementary Class, 1l.; Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall mall, London.

ARCHITECTURAL EXHIBITION.—A PACKAGES from the FRENCH EXHIBITION, whether of Drawings or Specimens for the Department of Materials, Patents, &c. may be sent direct to the Galleries, Suffolk-street, Pall mall East—notice to the Honorary Secretaries being first of all given. All other contributions on the 3rd and 4th DECEMBER next. Every information may be obtained of

JAMES FERGUSSON, F.R.A.S. } Honorary
20, Lansdown-place. } Secretaries.

By order, ROBERT THOMAS, Clerk to the Company.
Birmingham, October 16, 1855.

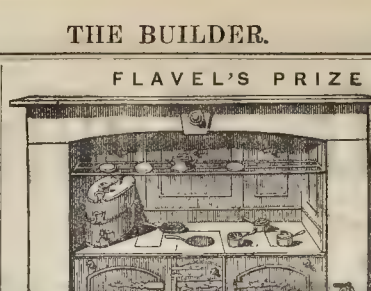
SHIPLEY WATER-WORKS.—To WROUGHT-IRON TUBE MANUFACTURERS, BRASS-FOUNDERS, PLUMBERS, and OTHERS.—The Local Board of Health for the District of Shipley are prepared to receive TENDERS for the following CONTRACTS:—
CONTRACT No. 6.—For the supply of Plain Iron, Galvanized Iron, and Lead Piping, High-pressure Cocks, Ferrules, and other Fittings for house-service water-supply.
CONTRACT No. 7.—For Excavating the Ground, Tapping Mains, Laying, Jointing, and Fixing Pipes, Cocks and other Fittings for house-service water supply.
Specifications may be inspected, and printed forms of Tender obtained, at the Offices of Mr. J. McANDS BOROUGH, Civil Engineer, 24, Queen-gate, Bradford, from whom any further necessary information may be procured. Sealed Tenders, properly endorsed, must be sent to me on or before MONDAY, the 29th of OCTOBER next ensuing.
By order, JO THOMPSON, Clerk to the Local Board.
Bradford, October 1st, 1855.

SCOTTISH CENTRAL RAILWAY.—CONTRACTS for WORKS.—The Directors of this Company are prepared to enter into CONTRACTS for the EXECUTION of the following WORKS, according to plans and specifications in the hands of Messrs. A. and A. HUTON, Architects, Perth, viz.:
GOODS SHED and OFFICES, at Stirling Station.
DRYING SHED, at Perth.
WORKSHOP and DWELLING-HOUSE, at Perth.
Tenders must include all the departments of works connected with each building and will require to be lodged with the Secretary at, or before, 1st NOVEMBER next, when the Directors will bind themselves to accept the lowest offer.
By order, JOHN A. JAMIESON, Secretary.
Perth, October 20th, 1855.

GREAT NORTHERN LONDON CEMETERY.—TENDERS for the SUPPLY of SNEATON RAG STONE are requested to be sent to the Offices of the Great Northern London Cemetery Company, 122, High Holborn London, addressed to Mr. E. A. SPURR, Architect. The Tenders to state the price per foot cube, delivered on trucks at the Colney Hatch Station of the Great Northern Railway, are requested to be sent, addressed to Mr. E. A. SPURR, Architect, at the Offices of the Great Northern London Cemetery Company, 122, High Holborn, London.

CONTRACT for ROADS.—The CITY of LONDON and COUNTIES FREEHOLD LAND SOCIETY.—The Committee are desirous of receiving TENDERS for making ROADS on their Tufnell Estate. The specification and plan may be seen at the Society's Offices, 70, Fore-street, City, where the Tenders are to be left before FOUR o'clock on WEDNESDAY next the 31st instant.

THE ESTATES COMMITTEE of the CORPORATION of the SONS of the CLERGY will MEET on FRIDAY, the 9th of NOVEMBER next, at ELLY'S Office, in Bedford-row, to receive TENDERS for a BUILDING LEASE for 30 years, of a piece of ground on the north side of Panmure-place, Queen-street, Cripplegate. Printed forms of Tender may be obtained of C. C. BARKER, Esq. the Registrar, at 2 Bloomsbury-place, Bloomsbury-square, and of Messrs. HUNT and STEPHENSON, 5, Parliament-street, Westminster.



FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.
This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to every DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in the better, safer, and more economical construction of cast iron girders and brick arches, and as ensuring the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, without the fear of ruin to everyone.
Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 13, York-buildings, Adelphi.

CHUBB'S LOCKS, with all the recent improvements, STRONG FIRE-PROOF SAFES, CASH and DEED BOXES.—Comprete lists of sizes and prices may be had on application.
CHUBB and SON, 57, St. Paul's-churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester, and Horsley-fields, Wolverhampton.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who manufactures for Builders, &c. to his Stock in Ironmongery, Brass Foundery, Nails (wrought and cut), Copper and Zinc, Patent Locks of all descriptions; Cisms, Glass, and Wood Warranters of all kinds, with Patent Shifting Spindles, Dr. Arnott's Ventilator, 4s.; and the new reversed Venetian Ventilator, so much admired, &c. 6s. 6d. each.
N.B. BOOBBYER'S late STURGE and BOOBBYER, established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.
14, Staunton-street, Clare-market, London.
No. 1081. Class 6, Section 16, BRITISH DEPARTMENT of the PARIS UNIVERSAL EXHIBITION, 1855.

SAWING, PLANING, and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the Kings-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times be short in the supply them. S. W. and Co. beg to state that they continue their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.
These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.
The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.
They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.
They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:
BENHAM AND SONS,
19, WIGMORE-STREET, LONDON;
and at the Crystal Palace, Sydenham.

PATENT GALVANIZING and CORRUGATING IRONWORKS (Improved Process).
WORKS—GLASS HOUSE YARD, opposite the Entrance to the London Docks.
GALVANIZED SHEET-IRON and WIRE of every description superior in all respects to that produced by any other process. THE TOUGHNESS AND MALLEABILITY of the Iron being preserved.
ESTIMATES given for IRON ROOFS, Corrugated Sheds, Houses, &c.
A Discount allowed to the Trade.

SKAIFE'S GALVANIZING WORKS, Commercial-road, Limehouse, London.
Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required.
Patent Galvanized Iron supplied in every form.
Sheets plain and corrugated—Roofs fixed complete.
J. Skaife is also Agent for Morewood and Rogers's Patent Galvanized Tunnel Iron, Plumbs Zinc, and Tiles.
An Allowance to the Trade.

JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superiority of iron as manufactured by them for that purpose, in point of lightness, cheapness, durability, when used for construction, and being free from dirt. Drawings and estimates furnished.
Island Foundry and Ironworks, Millwall, London.
Offices: 12, Fenchurch-street, City.

TUPPER and CARR, Contractors and Manufacturers of all sorts of IRON ROOFING.
PLAIN, CORRUGATED, PAINTED or GALVANIZED.
Estimates and Drawings furnished on application.
Experienced Workmen sent to all parts of the Country.
3, MANSION-HOUSE PLACE, and LIMEHOUSE, LONDON; and BERKLEY-STREET, BIRMINGHAM.

TUPPER and CARR'S (Crauford's) PATENT GALVANIZED IRON.
For Roofs, Flats, Cisterns, Gas Tubing, Gutters, Pipes, Sheeting, &c
To be obtained only at
TUPPER and CARR'S WAREHOUSES, REGENT'S CANAL DOCK, LIMEHOUSE, LONDON; or BERKLEY-STREET, BIRMINGHAM.
Sheets, Bars, Rods, Hoops, Nails, Rivets, Screws, Wire, and Manufactured Articles, Pails, Coal-scoops, Buckets, Pumps, &c always in Stock.
N.B. An allowance to the trade.
Address all letters to TUPPER and CARR, 3, MANSION-HOUSE-PLACE, CITY, LONDON.

TO ARCHITECTS, BUILDERS, AND THE TRADE.
PATENT PLUMBIC ZINC.
GREAT REDUCTION IN PRICE.
PLUMBIC ZINC is a perfect combination of Lead and Zinc, and not requiring to be more than one-fourth or one-fifth as thick as Sheet Lead, is consequently very much cheaper than that material, and at the reduced price costs but little more than Sheet Zinc.

No. 11 gauge weighs about	18 oz.	per foot super.	
12	"	" 20	"
14	"	" 24	"
14	"	" 26	"

Full particulars and the reduced price sent by post on application to
A. MOREWOOD and CO., DOWGATE-DOCK, LONDON, to whom all letters must be addressed.

A. MOREWOOD and CO. (late Morewood and Rogers), Dowgate Dock, Upper Thames-street, London, and Bakerville Works, Birmingham.
PATENT GALVANIZED TINNED IRON, and GALVANIZED IRON, in Sheets.
PLAIN or CORRUGATED, and Curved, of all Gauges.
Manufactured articles always kept in stock, such as pails, scoops, bowls, riddles, skips, &c. of all sizes.
Also the Patent Galvanized Tinned Iron Tiles, Gas and Water Tubing, Stamped and Moulded Gutters, Wire, Wire Netting, Hooping, Nails, Rivets, &c.
Estimates given for Roofs, and every description of Galvanized Building, at the
OFFICES and WAREHOUSE, DOWGATE DOCK, LONDON.

JOHN WALKER,
MANUFACTURER OF ROOFS, BUILDINGS, &c. &c.
Works—Mill-wall, Poplar.
Offices—Arthur-street West, London-bridge.

PATENT GALVANIZED IRON.
JOHN WALKER,
GALVANIZED IRON MERCHANT, &c.—The trade supplied Corrugating by steam power capable of doing 100 tons per day, at the lowest remunerative prices, for bulk.

IRON-FOUNDER, &c.
JOHN WALKER,
IRON-FOUNDER and ENGINEER.
Orders to any extent can be executed at his Works, Mill-wall, Poplar.—Apply at the Works.

BUILDER AND CONTRACTOR.
JOHN WALKER,
Having his own Sawmills is enabled to CONTRACT for BUILDERS' WORK.
At low prices, and work done well.
Apply at his Offices, Arthur-street West, London-bridge.

SAMUEL HEMMING'S PATENT MUCH approved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRISTOL to BOW, near London, close to the B.W. Railway Station.—A large variety of buildings always on view, churches, chapels, shooting boxes, lodges, mansions, ornamental villas, dwelling-houses, farm buildings, and fire-proof do. Also, railway stations, trucks, and carriages made to any plan on the shortest notice.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-grates, scrodoors for the same, hot-water pipes, elbows, ters, syphons, throttle valves, stop-cocks, flange and socket elbows, &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge, wharf No. 6, Bankside, London, near the Southwark-iron bridge.

CUNDY'S PATENT PURE WARM-AIR STOVES, the only Pedestal Stove which gained a Prize Medal (class 4?6), at the Great Exhibition in 1851, especially adapted for warming, with great economy, Churches, Chapels, Schools, Entrance-halls, Libraries, and Ware rooms. CUTLER and SONS, Sole Licensees and Manufacturers, 13, Great Queen-street, Long-acre, London.

DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by F. EDWARDS, SON, and CO. 42, Poland-street, Oxford-street, where one may be seen in daily use. The advantages of this grate consist in the smoke being perfectly consumed, no chimney sweeping being required, and a saving of from 40 to 50 per cent. being effected in the cost of fuel.—Prospectuses, with testimonials, sent on application.

GAS COOKING-STOVES, for large or small establishments.—DEANE, DRAY, and CO. 1, Arthur-street East, London-bridge.
Testimonial respecting the Crystal Palace Kitchen, as fitted by DEANE, DRAY, and Co
2, Ridgmount-place, Hampstead, March 9th, 1853.
Gentlemen,—I have great pleasure in bearing testimony to the capabilities of the extraordinary Gas Cooking Apparatus, being the largest and most perfect yet in use. Suitable for hotels mansions, club houses, private houses, and the service, having cooked in the last few days fowls, and many sorts of ham, beef, veal, mutton, lamb, tongue, &c.; roasting in one department a baron of beef weighing 84lbs. in nine hours, fifty-three minutes, presented by J. Baucer, Esq. Threadneedle-street, to the directors, for the banquet given to the foreign ministers. They have been in full operation for seven months, and are now in as perfect order as when first finished. "They have not cost one shilling for repairs."
I am, Gentlemen, yours respectfully,
EDWARD HORNE.
Messrs. Deane, Dray, and Co.

BUILDINGS HEATED by HOT WATER. G. R. COOPER, IRONWORKS, 21, DRURY-LANE. Ranges, Hot Plates, Gas Cooking Apparatus, Baths, &c. Ornamental and Constructive Ironwork.

ROYAL POLYTECHNIC GAS FIRE, BACHHOFFNER and DEFRIES'S PATENT. The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c., smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at DEFRIES'S Office, 145, Regent-street, London.

ESTABLISHED 1817
WILLIAM HARMER'S Smiths' Works, Stove and Range Manufactory, and Ironmongery, Metal, and Zinc Warehouse, 19, Horseferry-road, and 1, New Peter-street, Westminster.—Contractors, Builders, &c. supplied with General Ironmongery at the lowest wholesale prices.
Cottage Ranges, with oven or boiler, complete, 22s. each.
Self-acting Ditto, with ditto, from 35s.
Self-acting Oven and Boiler Ranges, with wrought fittings, &c. complete, from 45s. each.
Register Stoves, from 9d. per inch
Eliptic ditto, with double backs, from 3½d. per inch.

Cast-iron Rain-pipe	2	2½	3 inch.
	10d.	1s. 3d.	1s. 6d. per yard.
O G Gutters	3½	4	5 inch.
	1s.	1s. 1d.	1s. 3d. per yard.
Best Cut Clasp	1½	2	2½ inch and larger.
and Rose	10d.	1s. 6d.	1s. 6d.

1-inch Best Cut Lath, 16s. per cwt.
Sheet Floor Brads, 14s. per cwt.
3-in Floor Brads, 12s. 6d. per cwt.
Sash Weights, 7s. 9d. per cwt., 9-inch Air Bricks, 3s. 6d. per doz.; 6-inch Sink Traps, 8s. per doz.; strong Coal Plates, with hooks, 20s. per cwt. Sheet Zinc, Perforated Zinc and Tubing. Estimates given for Iron Railing, Gates, Balconies, and Ironwork of every description.

TO IRONMONGERS AND THE TRADE GENERALLY.
D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on view.—Every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price-list, Nos. 55 and 56, High Holborn.

LARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby destroying Smoke.
This invention, is now in operation upon Steam engine Furnaces, of Cornish and Wagon Boilers, and upon Ovens. It is adapted to other descriptions of Furnace, such as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most perfect of the inventions extant in subduing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.
Ten furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS BROTHERS, Nine Elms, London.
Address, THE SMOKE-BURNER COMPANY, Nine Elms, London.

STUART AND SMITH'S
PATENT GILL AIR WARMER.

TESTIMONIALS.

RICHARD REDGRAVE, Esq. R.A.

"18, Hyde-park Gate, Kensington, February 24, 1854.

"My dear Sir. The Air Warmer continues to work very satisfactorily indeed, with regard to the mean body of the house, and during this weather is charming, even in the painting-room. Mrs. Redgrave is extremely pleased with it in her domain, and says that she never enjoyed a winter before as she has done this, since the apparatus was fixed.—I remain, my dear Sir, yours sincerely,

"Mr. J. Jobson Smith." "RICHARD REDGRAVE.

JAMES SILK BUCKINGHAM, Esq. late M.P. for Sheffield.

"Stanhope-lodge, St. John's-wood, London, January 27th, 1855.

"Dear Sirs,—I am happy to be able to report to you most favourably as to the operation of your Patent Gill Air Warmer, which has exceeded the expectations I had formed of it. From a residence of many years in tropical climates, I have always been peculiarly susceptible of cold since my residence in England, and this has increased with increasing years and decreasing strength; I have, therefore, had recourse, from time to time, to various stoves and other modes of warming the hall and passages of my house; but I have never succeeded till now in producing an equal temperature over every part, and having that temperature completely under control, which your Air Warmer so effectually gives me. By its use we are really insensible to those changes of temperature and chills which are ordinarily produced in passing from warm rooms to cold halls and passages, and have the climate of May within doors in the months of December and January. The servants learnt its proper management in a few days without difficulty, and its economy in fuel is as remarkable as the many other good qualities it possesses. Indeed, I cannot speak too highly of it, and shall use no opportunity of heartily advising its adoption to all who desire to protect themselves against the changes of temperature in their dwellings.—I am, dear Sirs, yours faithfully.

"JAMES SILK BUCKINGHAM.

"To Messrs. Stuart and Smith, Rossoe-place, Sheffield."

M. E. HADFIELD, Esq Fellow of the Institute of British Architects.

"Sheffield, March 8, 1855.

"My dear Sir,—We have kept the Gill Stove in full operation during the past severe weather, and I have much pleasure in saying the result has been most satisfactory. The temperature of the house has been pleasant and equable, and the atmosphere perfectly free from the disagreeable oppressive odour produced usually by Hot Air Stoves. I can consequently recommend the principle to my friends as cheap and effective.—I am, my dear Sir, yours faithfully,

"Mr J Jobson Smith, Rossoe-place." "M. E. HADFIELD.

WILLIAM RUTSON, Esq.

"Newby Wiske, Thirsk, 15th February, 1855.

"Sirs,—I wish to tell you what promise of comfort as well as of economy I have in the Gill Stove placed in the staircase of my house recently built. In spite of the disadvantages incident to an uninhabited and unfurnished house, with all the doors open into the adjacent rooms, it is keeping up a very genial temperature over the temperature, even during this severe weather. The manner in which the air is admitted gives perfect control over the combustion; and I find, with coke at 18s. 8d. per ton, the rate at which it has been fired for the last two or three months, is 1d. per hour.

"I am, Sirs, yours truly, "WILLIAM RUTSON.

"Messrs. Stuart and Smith

"P.S.—Mr. Rutson, on looking again, sees the cost of coke for his Gill Stove, burning nine hours per diem, from 31st October to 9th February, for six days each week, was 3s. 6d. for coke say about 5d. per day."

EDWARD MARTIN, Esq. M.R.C.S.

"Sheffield, Glossop-road, February 27th, 1855.

"My dear Sir, I have now had the Patent Gill Air Warmer in operation during two winters, and the result has been extremely satisfactory. During the late severe frost, the comfort has been so great that I scarcely know how we could have done without it. Instead of the hall, staircase, and passages, being a reservoir of cold air, a genial warmth has been everywhere diffused; and when re overing from colds, my children have had the general run of the house without the fear of a relapse To many invalids the invention will prove invaluable, as one thus has the means of their habitation instead of confining them prisoners to one apartment.—Believe me, my dear Sir, very truly yours, "EDWARD MARTIN.

"Mr. Jobson Smith."

E. F. SANDERSON, Esq.

"West-street, Sheffield, 27th March, 1855

"Gentlemen,—The Gill Air Warmer you put up for me last year at Bradeliffe, and which I regarded with some distrust and doubt, has been thoroughly tested during the past severe and cold winter. Having been accustomed to a dry climate, my family has been painfully sensitive of the damp and chilly air of this country; but by the happy effects of your Air Warmer the house has been kept at a most agreeable temperature by a continued ventilation of pure, warm, fresh air. This excellent apparatus must be invaluable to invalids and delicate persons. I most cordially offer my testimony in approbation of your effective plan of rendering dwelling-houses most equably comfortable in point of temperature.—I am yours very truly,

"Messrs. Stuart and Smith, Rossoe-place." "E. F. ANDERSON.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

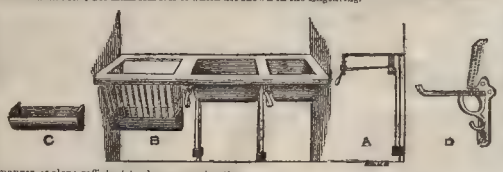
IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.



THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

NEW PATENT INVENTION FOR STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street,

have made important additions to their original Invention of PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, the main features of which are shown in the Engraving.

A. represents the Patent Hinge-guide and Collar-rein, the ball of which is taken to the back of the manger-work, with free loop and eare up or down the guide-bar, and is noiseless in its operation, and also a sure preventative against the most restive horse being cast in the stall.

B. The Patent Portable Seed-box can be instantly detached from the rack without disturbing the hay. The saving of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

C. The Seed-box detached, made of galvanized sheet-iron, light and durable.

D. The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAMS MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, durable, and impervious to infection. Manufactured galvanized and enamelled.

IMPROVED SURFACE-DRAIN, with safety covers, Sanitary Bars, Stable Pumps, Loose Box Fittings, Gutta-percha Preserving Saddle and Harness Brackets, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-Iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

Estimates and Catalogues on application

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

AUSTIN'S IMPERIAL
PATENT SASH and BLIND LINE,
can be obtained of all
ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY,
Established 1774.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.
ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

IRONMONGERY.
PFEIL AND STEDALL.
THE LARGEST STOCK AT
THE LOWEST PRICE,
5 AND 6, BROAD-STREET, BLOOMSBURY.
PATENT CORRUGATED IRON.

TO ARCHITECTS AND BUILDERS.
PATENT CLIMAX DOOR-SPRINGS.—The attention of architects, builders, and ironmongers is particularly directed to the above patented improvements in door-springs, being the most perfect and durable yet invented. Their power is equal to doors of any size and weight, and they are warranted to stand the wear and tear of any bank, public building, or business establishment in the kingdom.—Drawings, with full particulars, may be had from the manufacturers, WEBB and GREENWAY, Steelhouse-lane, Birmingham.

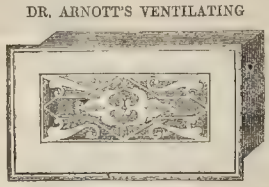
THOMAS EDINGTON, PURCHASER and INSPECTOR OF CASTINGS on COMMISSION,
17, GORDON-STREET, Glasgow.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, &c.
THE following are the PRESENT PRICES of PATENT SASH LINE:—

No.	3	4	5	6
	4s.	5s.	6s. 3d.	7s. 6d. per gross,

At JOHN YOUNGS, Birmingham and Wolverhampton, Agent, Factor, and General Ironmonger, 34, Blandford-street, Manchester-square, running out of Baker-street, Portman-square. Every other article equally reasonable.

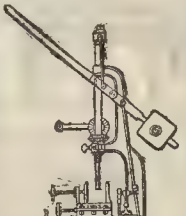
J. MICHIE, Engineer and Machinist, Battersea-park, Nine-elms, manufacturer of all kinds of Steam-Engines, Portable and Stationary, Sawing and Planing Machinery, Pumps, Cranes, Crabs, &c.
N.B. Several high-pressure Engines for Sale.



TO LOCAL BOARDS of HEALTH, WATER COMPANIES, and OTHERS.—The Swansea Local Board of Health have FOR SALE, about 2,200 yards of 12-inch, and 150 yards of 13 and 15-inch NEW WATER PIPES, principally in 9 feet lengths, each length weighing about 7 cwt. They are good strong castings, coated inside and outside with Dr. Angus Smith's solution, and made by Messrs. Cochrane and Co. Woodside Iron Works, near Dudley. The reason the Board wish to dispose of them is owing to their not being of a suitable size for their works. Tenders to be sent in to Mr EDWARD COUSINS, Surveyor to the Board, Guildhall, Swansea, from whom any further information respecting them may be obtained.
Swansea, Oct. 9, 1855.

IRON FOUNDRY, HARROW-STREET, LANT-STREET, SOUTHWARK.
W. R. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Newel and Railing Bars, Panels, Iron Coping, Hot Plates, Tank Plates, Area Gratings, Sash Weights, Fly and other Wheels, Riggers, Pinions, Engine and Lathe Castings, Forge Backs, Furnace Bars, Kilns, Pans, and other castings, to patterns or drawings.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.
J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any tune, note, or weight, singly or in peals.
TUNED BY MACHINERY.
Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.
MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.



LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE,
Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and
STEWART'S PATENT CAST IRON GAS and WATER PIPES.
Office, No. 7, Size-lane, London.

HART AND SON,

DR. ARNOTT'S VENTILATING

CHIMNEY-VALVE.
Illustrated Price-catalogues on receipt of four postage-stamps.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled.
Castings Warehouse removed from 81 to 63, Upper Thames-street.

KIMBERLEY'S PATENT FLOORING CRAMPS, Scaffolding Brackets, Door Springs, Mortising Machines, Casement Fasteners and Stays, Skylight Screws, &c. &c.
Also, KIMBERLEY'S PATENT GAS STOVES, may be had from any Ironmonger in town or country; from the Patentee, Inge-street, Birmingham; or from the London Agents, Messrs. PUGH and CO. 13, King-street, Snowhill, where a stock is kept.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinet-makers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.
P.S. Steam Engines and Machinery contracted for.

CAST-IRON PIPES, IRON-WORK FOR OVENS, &c.
RAIN PIPES, &c.—F. A. TIDDEMAN and CO. St. Ann's Wharf, Earl-street, City, near Blackfriars-bridge, keep a large stock of Rain Pipes, Heads, Shoes, Elbows, &c. half-round and G-G Gutters, Socket Pipes for Water or Gas, Flange Pipes, Hot Water Pipes and Connections, Sash Weights, and other castings; Iron-work for Bakers' Ovens of every description, fitted complete, to be had in sets or in parts.—Prices equal to all competition. Contracts taken to any extent. Goods landed. A powerful crane.

TO WHARFINGERS and WAREHOUSEMEN.—TO BE SOLD, a powerful CAST-IRON CRANE, suitable for waterside premises. May be seen on application to the Quarter-master Sergeant, at the Militia Depôt, at Guildford. Purchasers will address proposals to the Commanding Officer, or the Adjutant of the Second Royal Surrey Militia, at Guildford.

WAREHOUSE GATES.—TO BE SOLD, a large PAIR of FRAMED and BRACED GATES, well fitted for a warehouse or manufactory, 13 feet by 10 feet, strong framed posts and head, 12 feet by 15, large cast-iron bases to posts and spurs, granite cell, hung with four pair of hinges and fastenings, all in good condition. Also, a quantity of Feeble Pitching for Stables.—To be seen at the Works, Messrs. EPICENS, Tudor-street, Blackfriars.

P. O'CONNOR'S PATENT LEVER HINGE.—The most perfect and simple INVENTION for CLOSING SWING DOORS and GATES yet produced. The motive power being a weighted lever, it may be easily adapted to any size door, and is not liable to get out of repair as spring hinges generally are. May be had from all Ironmongers and Factors; J. CARTLAND and SON, Manufacturers, Birmingham; or from the Patentee, P. O'CONNOR, Ironmonger, Wavertree, Liverpool.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, bank, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

DREDGING-MACHINE.—WANTED, immediately, a new or second-hand Dredging Machine, complete, for use in a harbour and docks.—Apply, stating particulars and price, to EASTON and AMOS, Grove, Southwark.

JOHN HENDERSON PORTER, ENGINEER AND CONTRACTOR, IRON BUILDING AND ROOFING WORKS, GAS-STREET, BIRMINGHAM.
LONDON OFFICE—1, RICHES-COURT, LIME-STREET.

JOHN PARKIN and CO. late BLAKE and PARKIN, NEW MEADOW STEEL WORKS, SHEFFIELD, MANUFACTURERS of CIRCULAR and MILL SAWS IMPROVED CAST-STEEL FILES, &c. for the use of engineers and machinists. PATENT TEMPERED MACHINE KNIVES and CUTTERS, manufactured for planing and grooving wood, for cutting paper, iron, stone, leather, &c. made to any pattern or dimensions with the utmost exactness. Warranted to work with a harder and finer edge than any other mode of temper.
INVENTORS of CORE-ANNEALED CAST-STEEL for taps, piston-rods, &c. MANUFACTURERS of RAILWAY SPRINGS, BLISTER, SHEAR, and CAST-STEEL, &c.

LIVERPOOL and MANCHESTER PATENT GALVANIZED IRON WORKS.—FRANCIS MORTON and CO.—Galvanized Sheet Iron of the best quality; ditto, expressly prepared for Tinmen and Braziers. Corrugated Sheets, Painted or Galvanized, of all sizes, for Roofing, Fire-proof Partitions, Ceilings, &c. always kept in Stock. Gas and Water Tubing, Rain-water Gutters and Pipes; Wire of all numbers; Nails, Screws, Spikes, Hoops, &c.; Wrought Iron Hurdles, Field Gates, &c.—An allowance to Shippers and the Trade.—Head Offices, 18, James street (late Coalbrookdale Company's Premises), Liverpool, and at 16, St. Mary's-gate, Manchester.
N.B. Parties are particularly requested to note the address, LIVERPOOL.

HAVERSTOCK-HILL.—To BUILDERS. TO BE LET, in the MALDEN and QUEEN'S ROAD (both main roads), some commanding FRONTAGES for Shops and Private Houses. All the sewers are in on the estate, roads all formed, and now making. Term, ninety-nine years. Low ground-rents. Bricks supplied at a low price, and liberal cash advances.—Apply to Mr. JOHN MOORE, 86, Chalton-street, Euston-square.

LUDGATE-HILL.—TO BE LET, by the Worshipful Company of Cutlers, on repairing or building leases, a large portion of the BELLE SAUVAGE ESTATE, consisting of several houses, stabling, and vacant ground, eligible for warehouses, manufactories, public or private offices.—For plans and further particulars apply to Messrs. BEAUMONT and THOMPSON, Solicitors, 10, Lincoln's-inn-fields; or to Messrs. RICHARD TRESS and CHAMBERS, Architects, 27, Queen-street, City. JAMES BEAUMONT, Clerk.

MANUFACTURING PREMISES TO BE LET on lease, near the North Western Railway Station, consisting of a dwelling-house, workshop, counting-house, large yard, and stabling if required.—For particulars, apply to Mr. LEREW, 1, Cardington-street, Hampstead-road; or to A. B. I., Stauhope terrace, Gloucester-gate, Regent's-park.

BUILDER'S YARD.—Very large YARD, with Workshops, Dwelling-house, Counting-house, and Stables, TO BE LET, in Bermondsey, three quarters of a mile from London-bridge, and close to Spa station.—Apply to Messrs. EDWARDS and SMITH, 18, Great Carter-lane, Doctors'-commons.

GROUND TO BE LET, on Lease, in the best part of Euston-square, close to the London University, suitable for public buildings, or good private houses.—Apply to Mr. GRAHAM'S OFFICE, Taviton-street, Gordon-square.

BOUVERIE-STREET.—TO BE LET, TWO ROOMS, each 20 feet by 28 feet, with private water-closet. Rent, including taxes, 40l. Also, together or separately, several Rooms, 40 feet by 27 feet; with option of purchase of the materials of a large house and stables standing thereon.—For terms, apply to Mr. OVENDON, 1, Denbigh-row, Notting-hill.

TO BUILDERS and OTHERS.—TO LET, a BRICKYARD and WHARF, in the County of Kent, within easy distance of London, with every convenience for the manufacture and shipment of Bricks.—For further particulars apply to X. Y. Z. Post-office, Sittingbourne.

FREEHOLD LAND TO BE LET, on Building Leases.—The Rev. WILLIAM FORD, and Mr. HENRY WEBBER, Executors of Richard Barford, esq. late of Tollington-park, have to offer TWO valuable PLOTS of FREEHOLD LAND, for Building Leases, for a term of Ninety Years, in Barford street, Liverpool-road, Islington. The land-tax is redeemed, and the sewer is made.—For particulars, apply to Mr. HENRY WEBBER, 31, Old street, St. Luke's.

CECIL-STREET, Strand, and St. Martin's-court, Leicester-square.—TO BE LET, on Building Lease, No. 25, in Cecil-street, and No. 2, St. Martin's-court.—For particulars apply to Messrs. GEORGE NICHOLSON and SON, Solicitors, 4, Old Palace-yard, Westminster; or to THOMAS SMITH, Esq. 14, Hart-street, Bloomsbury.

ALLOTMENT of ESTATES.—The CONSERVATIVE LAND SOCIETY.—The allotment of the Hackney Estate, Middlesex, and of the Guildford Estate, West Surrey, is fixed for THURSDAY, NOVEMBER 22nd. On SATURDAY, the 10th of NOVEMBER, the thirtieth public drawing for right of choice on the Society's allotted and unallotted estates will take place at noon, at the Offices. A public Meeting will be held in Hackney, on THURSDAY, the 15th of NOVEMBER, Viscount RANELAGH in the chair. For shares, rights of choice, prospectuses, and plans of estates, apply to
CHARLES LEWIS GRUNEISEN, Secretary,
Offices—No 33, Norfolk-street, Strand, London.

TO OMNIBUS PROPRIETORS, CARMEN, and OTHERS, requiring extensive STABLING and YARD.—The above TO BE LET, in the HAMPSTEAD-ROAD, on Ground upon which to erect the same.—Apply to CHAS. G. BARLOW, 11, Portman-street, Portman-square.

TO CARPENTERS, BUILDERS, &c.
ONE or MORE HOUSES, in CARCASE, with Garden Walls and Washhouse, TO BE LET, on a ground-rent, or TO BE SOLD; the purchase money can stand over a given time at five per cent.—Inquire of Mr. CHARLES MARSHALL, Builder and Bricklayer, Albert-terrace, Kentish-town.

A CARCASE of a SIX-ROOMED HOUSE, and the plastering of the same to be completed, to be given in EXCHANGE for the CARPENTER'S and JOINER'S WORK of two of the same class.—Apply to T. M. 42, Story-street, Caledonian-road, Islington.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

CHEAP AND DURABLE ROOFING.

By Her Majesty's  Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION, AS THE ONLY WORKS in Great Britain where the above roofing is made are F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt to be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

ANCIENT·HOUSE·FURNITURE

In order to supply the deficiency which has hitherto existed in Furniture suitable for the many Mansions that have been erected or restored in the MEDIÆVAL STYLES, Messrs. GRACE have directed their particular attention to this subject, in addition to their other works, and have prepared appropriate specimens in the various branches of Furnishing.

STUFFS for HANGINGS, in simple Worsted Damask, in Silk; also in Tapestry of Baudekin.

CARPETS, plain or in rich Velvet pile, with appropriate Borders.

PAPER-HANGINGS of various kinds.

OAK CABINETS, Buffets, Octagon Library and Occasional Tables, Benches, Chairs, and other useful and appropriate Furniture.

The whole of the above-mentioned Furniture, &c. is designed by the late Mr. A. W. PUGIN, Architect.

To render this Furniture generally available, a considerable portion has been arranged in the simplest manner, consistent with its ancient character.

14, Wigmore-street, January, 1853

Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

WINDOW-BLINDS.—J. FULLER, Manufacturer, 29, Charlotte-street, Blackfriars-road. Established, 1850.—Venetian Blinds, from 8s. each, or 8d. per foot; Wire ditto, 7s. each, or 1s. 9d. per foot; Holland ditto, from 3s. each, or 3d. per foot. Every other description of Blinds equally low, warranted of the best manufacture. Discount to Builders and the Trade. Fixed complete.

PATENT SOLID SWISS PARQUETERIE This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country; an extensive assortment of specimens and patterns commencing at 1s per foot super, together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 2, Charlotte-row, Mansion-house; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

DURABILITY of GUTTA PERCHA TUBING. Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT.—Second Testimonial.—"March 30th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

CHAS. MACINTOSH and CO. Patentees of the VULCANIZED INDIA-RUBBER, and GENERAL MANUFACTURERS of WATERPROOF, AIRPROOF, and ELASTIC RUBBER GOODS beg to inform all persons who desire to correspond with them direct, that their SOLE ESTABLISHMENTS are No. 4, Cannon-street West, London, and Cambridge-street, Manchester. This notice is necessary, as the term Macintosh Depôt, Macintosh Warehouse, &c. is frequently adopted both in London and the country by vendors of India-rubber goods, who deal in articles not of the manufacture of CHAS. MACINTOSH and CO. — Goods manufactured by CHAS. MACINTOSH and CO. are stamped with the name of the firm.

CLEGG ON COAL GAS.

Now ready, in demy 4to. with numerous Engravings and Woodcuts, price 1l. 11s. 6d. bound in cloth, the Second Edition, considerably enlarged, of a

PRACTICAL TREATISE ON THE MANUFACTURE AND DISTRIBUTION OF COAL GAS,

ITS INTRODUCTION AND PROGRESSIVE DEVELOPMENT.

Illustrated by Engravings from Working Drawings, with General Estimates.

By SAMUEL CLEGG, Jun. M. Inst. C.E. F.G.S.

London: JOHN WEALE, 59, High Holborn.

Just published, price 2s.

THE METROPOLITAN BUILDING ACT; with Notes and Cases, explanatory of its Law and Practice; List of District Surveyors; the Unrepealed Sections of the 8 Vict. c. 84.; Index, &c.
By FREDERICK W. LAXTON, F.S.A. Barrister-at-Law.
London: BUTTERWORTHS, 7, Fleet-street.

This day, with 176 illustrations 7s.

FIRST LINES in CHEMISTRY: a Manual for Students
By ALBERT J. BERNAYS, Ph.D. F.C.S.,
Lecturer on Chemistry at the Medical School of St. Mary's Hospital, Author of "Household Chemistry."
London: JOHN W. PARKER and SON, West Strand

On Friday next, in 8vo. with many Woodcuts.

PEREIRA'S ELEMENTS of MATERIA MEDICA and THERAPEUTICS. Vol. II. Part I. Fourth Edition.
Edited by A. S. TAYLOR, M.D. &c. and G. O. REES, M.D.
Lately published, a New Edition, in 8vo. price 7s.
PEREIRA'S LECTURES on POLARISED LIGHT. Edited by the Rev. BADEN POWELL, M.A.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

NEW EDITION OF SIR HENRY HOLLAND'S MEDICAL NOTES AND REFLECTIONS.
Just published, in 1 vol 8vo. price 16s. cloth.
MEDICAL NOTES and REFLECTIONS.
By Sir HENRY HOLLAND, Bart. M.D. F.R.S. &c.
Fellow of the Royal College of Physicians, Physician in Ordinary to Her Majesty the Queen, and to His Royal Highness Prince Albert.
Third Edition, with Alterations and Additions.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

THE TRAVELLER'S LIBRARY.
On Wednesday next, in 1 vol. price One Shilling,
PICTURES from CUBA.
By WILLIAM H. HURLBUT
Forming Part 90 of "The Traveller's Library."
London: LONGMAN, BROWN, GREEN, and LONGMANS.

Will be published November 1st, Part IV. containing Four large Plates, in a neat Wrapper, with Advertisements, price 2s. 6d. Also Division I. comprising the First Four Parts, or Sixteen Plates, price 10s.
EXAMPLES of BUILDING CONSTRUCTION, being a series of Working Drawings, to a large scale, of the Details of Public and Private Edifices.
By HENRY LAXTON,
Of the "Civil Engineer and Architect's Journal," author of "Laxton's Builders' Price Book," &c.
No. 10, Arundel-street, Strand; and of all Booksellers.

THE QUARTERLY REVIEW,
No. CXCIV. is published THIS DAY.
CONTENTS
I. LIFE AND OPINIONS OF HUET.
II. SCHOOL SERMONS.
III. MR. THACKERAY AND THE NEWCOMES.
IV. THE CALDWELL PAPERS.
V. THE CHARTERS AND POOR OF LONDON.
VI. LATIN DICTIONARIES.
VII. ARAGO AND BUCCKLEY ON MEN OF SCIENCE.
VIII. PITT AND FOX.
JOHN MURRAY, Albemarle-street

THE FREEMASONS' MONTHLY MAGAZINE. Price 1s. A Specimen Number will be sent on receipt of six postage-stamps (the cost of postage). No. X. for October, just published.
GEO. ROUTLEDGE and CO. Farringdon-street; and
R. SPENCER, 314, High Holborn.

Third Edition.

THE BUILDER'S FRIEND,
Price One Shilling,
Office of "The Builder," and of all Booksellers.

Neatly bound, price 1s.

A HANDBOOK of ARCHITECTURE for the UNLEARNED; in a Series of Letters to a Lady, embodying a Popular Sketch of the History of Architecture, and the Characteristics of the various Styles which have prevailed.
By GEORGE GODWIN, F.R.S. &c.
With Illustrations.
By the same Author, price 1s.
LONDON SHADOWS; or, a Glance at the Homes of the Thousands. With Illustrations
Office of "The Builder," 1, York-street, Covent Garden; and from any Bookseller.

ARCHITECTURAL PUBLICATION SOCIETY.—PART II. for 1854-55, containing Illustrations to the "DICTIONARY of ARCHITECTURE," will be ready at the end of the month. The Secretary wishes to purchase two copies of the works for 1848-9 and 1849-50.
WYATT PAPWORTH, Hon. Sec.
14a, Great Marlborough-street, October 23.

TO ARCHITECTS.
EXHIBITION and COMPETITION DRAWINGS coloured or tinted, and superior LITHOGRAPHY in its various branches, executed by Mr. T. J. RAWLINS (Author of Elementary Drawing Classes, adopted at Marlborough House; Outlines of Sculpture; Modern Architecture, &c. &c.), 38, University-street, University College, London.

PARLIAMENTARY PLANS and SECTIONS, Books of Reference, Bills of Quantities, Specifications, Plans for Prospectuses, &c. Briefs, Circulars, &c. LITHOGRAPHED on the shortest notice and at the lowest possible prices. A large assortment of Autographic and Lithographic Printing executed on the Premises, by METCHIM and BURT, 2 and 3, Parliament street, Westminster

MATHEMATICAL DRAWING INSTRUMENTS, JOHN ARCHBUTT, 2, Westminster Bridge-road, Lambeth near Astley's Theatre, begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.
N.B. A few New and Second-hand Levels and Theodolites always for Sale.

TO ENGINEERS AND ARCHITECTS.
LEVELS, price 6l. of first-class work, consisting of a 16-in. telescope adjusted by rack, sun-shade, parallel plates on tripod stand, or pointed leg for use in a coal pit. The instrument is perfectly adapted for drawing.—To be had of the maker, JOHN DAVIS, Opticial, &c. Ely.

PHOTOGRAPHY.—A complete Apparatus, 3l. 3l. 5s. and 11l. 11s.—Send for a List, post-free, at GILBERT FLEMING'S, 488 Oxford-street, Author of "First Steps in Photography," price 6d., by post seven stamps.

TO ARCHITECTS
COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 33, Albany-street, Regent's park.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES, Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural and Civil Engineering, Drawing, and Colouring. Making Finished and Working Drawings. Preparing Specifications, Taking out Quantities, Estimating, &c. &c. Terms: Day Pupils Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter, which includes Drawing Boards, T Squares, Plans, Drawings, Models, &c. For Prospectuses apply at the Offices, 3a, Guilford-street, Russell-square.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally that he is enabled to allow a discount of 10 per cent. upon his list prices for Mouldings. A large stock of dry flooring at low prices. Southwark bridge Wharf, Bankside.

JOHN DAVY, English Timber Merchant, Contractor, and Wharfinger, begs to invite Cabinetmakers, Wheelwrights Builders and others to inspect his carefully-selected STOCK of every description of ENGLISH TIMBER, including Spokes, Felloes, and Stocks, which he is enabled to offer at extremely low prices for cash. J. D. also begs the attention of the Builders of Paddington to arrangements he has made whereby he can undertake to convey Timber direct from the Docks to his Wharf in Paddington-basin, and deliver the same in the immediate locality, at 5s. 9d. per load. Timber, Deals, and every description of heavy goods landed or carted to or from the docks, railways, and all parts of London. Oak, in plank, &c. at very reduced prices. A remarkably fine butt of Elm, 28 feet long, 6 feet diameter, perfectly clear and straight.—6, Irongate Wharf, Paddington green.

GREAT REDUCTION of PRICES.—It being now ascertained that the importation of Pine Planks will be unusually short this year, a great advance in price is the result, but S. P. having a considerable stock on hand, is still enabled to quote the following reduced prices:—

Pine Planks, 12 ft. 3 in. by 11 in.	from 4s. 6d.	each.
Spruce Deals	„ 3s. 9d.	„
Yellow ditto	„ 4s. 6d.	„
Yellow Battens, 12 ft. 3 in. by 13 in. per 120.		
Honduras Mahogany, in logs	„ 0s. 4½d.	per ft. sup.
Ditto ditto, in boards and planks	„ 0s. 6d.	„

Prepared Flooring, Veneers, &c. at equally low prices. A list forwarded on application.
SAMUEL PUTTEY, Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

REDUCED PRICES.—EDWARD SIMMS, late William Cleave, of Wilton road, Pimlico Basin, begs to acquaint Builders and the Trade that he has now on hand at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ½ inch to 1½ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber Deals, Oak Planks, Scantlings, Sash Bills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S late W. Cleave's Flooring Manufactory, Wilton-road, Pimlico Basin.

PADDINGTON TIMBER-YARD.—SAWING, PLANING, and MOULDINGS.—3, Irongate Wharf, Praed-street, Paddington, and 36, St. John's-wood-terrace, St. John's-wood.—GEORGE WILLIAM FRY begs to draw attention to his large STOCK of SEASONED and PREPARED WOOD GOODS at the lowest current prices. Liberal allowance for cash, and facility for immediate despatch by rail or canal, which affords every advantage to country as well as town buyers. Illustrated and priced sheets of mouldings for dealers and general price lists of goods forwarded post free on application. Goods free to any part of town, including the various railway and canal stations.
N.B.—Sawing and planing for the trade.

MOULDINGS by MACHINERY, to any Design, carefully packed and sent to all parts of the country.
Address, E. SIMMS,
SAWING, PLANING, AND MOULDING MILLS,
King's-road Chelsea and Wilton-road, Pimlico.

MACHINE CARVING, JOINERY, and MOULDING WORKS, Belvidere-road, Lambeth.—The Proprietor of the above works begs respectfully to apprise the nobility, clergy, architects, builders, cabinet-makers, and trades generally requiring Carved and Moulded Works, that he is now enabled to execute any order that may be entrusted to him with the utmost promptitude. Every description of Carved Work and Tracery, modelled out by the machines for the trade only. Pulpits, Lecterns, Reading Desks, Screens, Altar-rails, Tables, Chairs, &c. executed at the shortest notice. Specimens of Carved Work, suitable for various purposes, can be seen at the Works, and Estimates furnished upon application.

SEASONED FLOORING.—GEO. NOKES and Co., late Architects and Artificers, beg to acquaint builders and the trade, that they have a large STOCK of DRY WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at the following reduced prices, for cash:—

1 inch White, 13s. 6d. per square.			½ inch Yellow, 15s. per square.		
¾ ditto	15s.	„	ditto	16s. 6d.	„
1 ditto	18s.	„	ditto	20s.	„

Also Timber, Deals, Planks, &c. Mouldings by machinery in every great variety.
Laths, 3s. per load.
ST. PANCRAS SAW-MILLS, Cambridge-street, Old St. Pancras-road.

TO TIMBER MERCHANTS and OTHERS.
WANTED, a quantity of TIMBER, DEALS, and other BUILDING MATERIALS, for which payment will be made with finished houses.—Apply by letter post paid, to J. TWITCHIN, 7 Orchard-terrace, Willesden, Kentish town.

BALCONY PANELS. — About 70 cwt. of Panels, 10 cwt. of Newell Bars, and 15 cwt. of Railing Bars, TO BE SOLD, at 9s. 6d. per cwt. Also, a quantity of strong old pattern Register Stoves and Ranges to be Sold, very cheap.—Apply to SCHOOLING and CO. Wholesale Ironmongers, 14, Great Garden-street, Whitechapel road, London.

ACORN TIMBER WHARF.—At RICHARD MAY'S extensive Waterside Premises and Saw-mill, Canal Bridge, Old Kent road, builders and others can be supplied with all kinds of FOREIGN TIMBER; planks, deals, and battens on sale, direct from the importers; prepared floorboards, mouldings, pine and fir deals, sating battens, laths, English oak plank, and sash sills, at reduced prices for cash. The Monthly Price Current forwarded on application.

TO BUILDERS AND OTHERS.
AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING and MATCH BOARDING of all descriptions. Also an extensive stock of Dry White, Yellow, and Pine Cut Stuff, Sinking, Battens, Part for Lathe, Oak Plank, Sash Cills, &c. Timber of all kinds, Planks, Deals, and Battens, fetched from the docks, sawn by patent machinery in the best manner, and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London.

OAK VARNISH, 8s. 6d. per Gallon, in quantities not less than two gallons, for cash only, at C. LEETWICH'S Lead, Glass, and Colour Warehouse, 21, Manchester-street, Regent's-park. A large quantity of PAPER-HANGINGS, CHEAP. 2½d. per cut given for old lead.

TO ARCHITECTS, BUILDERS, &c.
IMPERIAL OAK STAIN, for Staining Deal, &c. to imitate Oak of every shade of colour. This Stain is recommended, after years of practical experience, as the most beautiful, durable, and economical ever used. It may be varnished, dry rubbed with oil, wax polished, or French polished 5s. and 6s. per gall.—Made and prepared by J. ELLIOTT, Beech Cottage, Cambridge heath, Hackney near Cambridge-heath Gate. Estimates given, for staining, with or without varnishing, &c. Gentlemen waited on with specimens.—Country orders punctually attended to.

NOTICE.—IMPROVED WOOD MOULDING MILLS and MARBLE WORKS.—J. SIMMONS begs to acquaint his customers and friends that in consequence of the increased trade and patronage he is continually receiving, he has found it necessary to have larger premises for the manufacture of his IMPROVED WOOD MOULDINGS, which are acknowledged by the principal large firms, architects, and others, who have used them, to be the best ever produced by machinery. J. S. in returning thanks for the liberal patronage already bestowed upon him, begs to call attention to his large stock of mouldings now on hand. Marble chimney-pieces, monuments, tombs, and every description of marble and stone work also manufactured by patent machinery.—NEW WORKS, No. 20, BRIDGE-TERRACE, HARROW-ROAD, PADDINGTON, about 100 yards from the Great Western Railway Bridge. New Price Lists will shortly be ready; to be had on application, or if forwarded, by enclosing six postage-stamps.—Please note the address 20, BRIDGE-TERRACE, HARROW ROAD, Paddington, near the Great Western Railway Bridge.

TO BUILDERS AND HOUSE PAINTERS.
THE BRIDGEWATER PAINT will be found CHEAPER and SUPERIOR to white lead for oiling out new walls or priming woodwork, &c.
TESTIMONIAL.—"This is the most extraordinary paint I ever used. Where its merits become known, it can not fail to be generally used. For priming and second colouring to all new work, it is superior to that now in use, being equal in body to white lead, and much lighter. It is also cheaper. I am using it to paint coarse linen for gardeners' pits, frames, and greenhouses, and also as a substitute for tarpaulin, being impervious to rain, of singular flexibility, more durable, and not half the weight of the tarpaulin in general use. J. LE CREN, House-painter,
29, Margate street.
Sold by L. FRANK and SON, Oil Merchants,
14, Borough, London-bridge.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.
The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it that act which it then produced a very inferior material of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.
The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM. mark—in Hull by Messrs. ELLIS and SILENCE, and Co.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents in London, Messrs. FRANCIS DEVAS and CO. Wholesale Agents, 62, King William-street, City; FREDERICK BRABY, Wholesale and Retail Agent, 8, Tottenham court, New-road. In Manchester and Liverpool by R. CLAY, 5, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bunk, and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 28, and 28½ and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.
The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paints by contract.
For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA-COTTA to M. H. BLANCHARD, late of Coade's Original Works, and successor to them in the manufacture of that useful building material, that has been so successfully adopted for nearly a century in this country, by our eminent architects and others, to the adornment of our noblest buildings, and as the only tried material that is capable to stand the ravages of time unimpaired. Groups, Statues, Vases, Fountains, and Architectural Embellishments, at prices and quality that will defy competition. A large Stock of highly-designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

BLASHFIELD'S PATENT TERRA-COTTA, Manufactured at Millwall, Isle of Dogs. Capitals, Consoles, Tracery for Parapets, Balusters, String Courses, Freezes, Bas-relievi, Vases, Statues, Chimney-shafts, and all other Architectural Ornaments, modelled, finished, and burnt, in the most manner, and warranted to stand heat and frost, either in Buff or Red-coloured Terra-cotta.—A great variety and large stock can be seen at BLASHFIELD'S Warehouse and Show Rooms, No. 1, Praed-street, Paddington.

The Builder.

Vol. XIII.—No. 664.

IN our present number will be found a view of one of the mediæval glories of Paris, the Sainte Chapelle, as it now appears in its restored state;* and we propose to give some little account of it, and to say a few words about other parts of the ancient city. The observations we thought it our duty to make recently touching Paris and the Parisians of the present day, have brought us a heap of letters from both Frenchmen and Englishmen, admitting their justice, and urging us to a continuance of the remarks. It is to be hoped that what has been said may assist in leading to improvements in a sanitary point of view, in which case the Parisians will have more cause to be thankful than if we had joined the ranks of their indiscriminating adulators. We shall have more to say on this head, and of some of the modern buildings. We have some memoranda, too, of special objects in the Universal Exhibition, aided by notes furnished to the Board of Trade by some of the English Commissioners and jurors, about to be published: but these must bide their time.

The germ of this Paris of the nineteenth century is the small island in the Seine, now known as *La Cité*, whereon stands the cathedral of Notre Dame. This was the *Lutetia* of the Romans; a bridge over the Seine on either side, beyond the east end of the cathedral, connecting the city with the roads to the provinces north and south. At the other end of the island, the western, the kings of France fixed their habitation. There, too, the parliament met, and the judges dispensed the law. The palace occupied more than a third of the whole area of the island, and bristled with turrets and spires. Fire devastated it in 1618, and again in 1776. The Palais de Justice was afterwards modernized, and at the present time the remains of the mediæval building are comparatively few. Chief amongst them is the Sainte Chapelle.

In 1239, through the necessities of the reigning Emperor of Constantinople, Louis IX. ("Saint Louis") obtained possession of the Crown of Thorns. Two years afterwards, other relics of the Saviour came into his possession, and he determined on building an edifice for their reception. He therefore instructed his architect, Pierre de Montereau, or Montreuil, to prepare a magnificent shrine, and himself laid the first stone in 1245. In three years, with the expenditure it is estimated of 40,000*l.* Peter finished his noble work;† and on the 25th of April, 1248, it was consecrated. Well did Pierre de Montreuil realise the wishes of his master, and in so doing he raised a monument to himself. He died, we may add, in 1260, or as some state, in 1266, and was buried in the Chapel of the Virgin, in the abbey of St. Germain des Prés. A Latin inscription on his monument, according to M. Froche, in his account of the Sainte Chapelle, said (using M. Froche's words), "*Ici repose Pierre de Montereau, l'honneur des mœurs et le maître des ouvriers. Dieu l'appela à lui à l'âge de 54 ans.*"

The building is in two stories, the lower chapel and the upper chapel: the extreme outer length, including the buttresses, is 118 feet; the extreme width, 55 feet; the width between the wall, 35 feet; the height from the ground externally, to the apex of the gable, 138 feet; the height of the upper chapel from the pavement to the crown of the vault, 67 feet; and the height of the spire from the ridge to the weather-cock, 114 feet. The rose-window, we should add, was the work of a later period.

In the decoration of it internally, gilding, painting, enamel and stained glass, were used lavishly, and all the resources of art were drawn upon. Royal marriages, betrothments, and coronations, took place in the Sainte Chapelle; and it was the starting point of numerous expeditions to the Holy Land. In 1791, it was given up to lay purposes, became the meeting-place of a club and a depôt for flour, and was much injured.

Louis XVIII. and Charles X. showed their desire to bring it back to its original purpose and condition, but it was not till the reign of Louis Philippe, in 1837, that its restoration was decided on, the task being entrusted to M. Duban, architect, with Messrs. Lassus and Viollet-le-Duc as assistants. After twelve years' work it came wholly into the hands of M. Lassus, by whom it has been carried satisfactorily to completion. The accompanying view of the exterior renders description unnecessary, and we shall hereafter give a view of the interior. It will be noticed that on the pinnacles of the turrets at the west end, on each side of the rose-window, the Crown of Thorns is represented above the Crown of France.

The spire, which M. Lassus has erected with much skill and taste, adopting, nevertheless, the style of a later period than that of the building, is the fourth that has surmounted the Sainte Chapelle. The third of these, erected by Louis XIII. was destroyed in 1791. Around the octagon base of the spire are figures of the twelve apostles, larger than life. The figure of St. Thomas is a representation of the architect, M. Lassus; St. Philip is a likeness of M. Steinheil, glass painter; and various figures scattered about the spire represent the carver, the modeller, the lead-worker, and others immediately concerned in the restoration, and are inscribed with their names. With the exception of the cross and weathercock, which are of iron and copper, the whole of the ornamental work is of lead, formed with the hammer, and gilt: the ornamental work on the ridge, very large and elaborate, is also of lead. At the eastern termination of the ridge is the figure of an angel, nearly 10 feet high, which revolves, by means of clockwork, with the sun. One hand holds a cross and the other points to the position of the sun. Messrs. Durand, of Paris, by whom the works in lead were executed, deserve mention. "No hammered leadwork," says M. Froche, "had been executed since the fifteenth century; this, then, is the first instance wherein for four centuries such work has been done, a circumstance we consider as a fresh and precious conquest for industry. We must, logically, infer that one of the unquestionable advantages of monumental restoration is to establish intelligent workmen, to elevate them in a degree, by bringing them nearer to the artist, and to create new resources for the arts and commerce." In this way, restorations, and more especially this of the Sainte Chapelle of Paris, have revived branches of industry extinguished, or rather forgotten, for a long time, such as working in iron, painting in enamel, glass staining, repoussé work, and embroidery.

The interior glows with colour, gilding, and enamel: the windows are filled with stained glass, and every inch of the walls and ceiling is painted,—on the whole, as it seems to us, very successfully. There is a prodigious quantity of stained glass, and the ancient portion is particularly valuable in the history of the art, because we know that, with the exception of that in the rose-window, it was there when the chapel was consecrated in 1248. Much of the ancient glass was destroyed. The building had been used previously to the restoration, as a depository for records (like the Chapter-house, at Westminster), and the lower part of each window had been removed, and the openings blocked up: no care had been taken when repairs were executed to make the subjects perfect, and the whole was in disorder. The importance and difficulty of this part of the restoration being felt, a public competition was invited, and the Minister of Public Works, named a commission to make the selection. The artist chosen for the undertaking was M. H. Gérente, but he had made but small progress with the work before, unfortunately in 1852, death carried him off. M. Steinheil, with the practical co-operation of M. Lusson, was then appointed in his place, and by these gentlemen the windows have been perfected. Each window, as is usual with glass of the thirteenth century, presents a number of subjects, one as many as 121, all taken from the Old and New Testament, with the exception of those in one window, which relate to the history of Saint Louis and the translation of the holy crown of thorns. The first window on the north side, beginning from the west end, illustrates the Creation of the World, the Fall of Man, and the History of the Patriarchs: the second, the History of Moses, the Captivity of the Jews, their Deliverance and Victories, the Tables of the Law, and so on. M. Guilhermy points out the curious circumstance that in the sixth window, the second in the Absis, which exhibits the history of Isaiah, the prophet is shown reprimanding *Mahomet*, who is represented as the personification of Idolatry. The name of the Arab legislator is written by the glass painter of the thirteenth century exactly as we write it to-day.

The windows, we may add, consist mostly of a dark blue ground, with red and yellow upon it. The ceiling is blue, sprinkled with the everlasting gold stars, and there is a large amount of gilding amongst the colours on the stonework. We shall return to the subject when we give a view of the interior, and in the meanwhile we have said enough to show that there is much to be seen in the Sainte Chapelle of Paris.

* See p. 511

† In the "Itinéraire Archéologique de Paris," by M. Guilhermy, the cost is stated at 800,000 *livres*. But this must be an error; France must be meant. Including the relics and the shrines to contain them, about 150,000*l.* were spent.

THE CHEMISTRY OF BUILDING MATERIALS.*

With the following we conclude our report of the papers read at meetings of the Architectural Institute of Scotland, by Dr. George Wilson, and printed in its "Transactions."

Composite Limestones.—The majority of limestones contain other ingredients besides one or both of the calcareous carbonates. A cursory examination is sufficient to demonstrate that many of them are aggregations of shells, corals, and the stony skeletons, habitations, or other solid appendages, of fresh water and marine animals.

Those shells, corals, and the like, are sometimes tolerably perfect, but more frequently are broken into fragments of various sizes, or reduced to a chalk-like powder, in which the larger fragments are imbedded. They have been fractured, comminuted, and pulverized under water, from which they afterwards deposited in sedimentary strata; these have ultimately consolidated into limestone rocks, and as such, now form in many parts of the world whole mountain masses. Rocks formed in this way must contain more or less of all the substances originally present in the calcareous (as well as some of the other) appendages of the animals from whose remains they are produced. Organic matter, accordingly, generally in the form of coaly or bituminous deposits, and phosphate of lime, may generally be looked for in such limestones. The cavities also left empty in the shells and corals, by the death of the animals once occupying them, become filled up, in some cases, by shell powder or chalk; in others by crystals of carbonate of lime; in others by silicious sand, or clay, or bitumen, or mixtures of all.

* See pp. 375, 387, 410, 439, 435, 447, 460, 472, and 482, *ante*.

Further, as the process we are describing is carried on under water, and irregular fragments of shells cannot cohere without leaving spaces unoccupied between them, these spaces cannot fail to become filled up with such substances as are in solution or suspension in the water; but these will be very much the same things as have already been referred to as liable to fill the emptied shells.

It would serve no practical end to discuss, one by one, all the varieties of composite limestone. Suffice it to consider the following:—

1. Petrifaction limestone.
2. Silicious limestone.
3. Aluminous limestone.
4. Phosphatic limestone.
5. Bituminous limestone.

1. *Petrifaction Limestone.*—This variety of stone is most familiar in its form of shell or shelly limestone; but as many beautiful building stones of our own country consist chiefly of *madrepores* and other corals, and others of *encrinites* or stone lilies (the skeletons of animals allied to star-fishes), it is better to employ a title sufficiently comprehensive to include them, as well as the shelly limestones.

The petrifaction limestones are generally dark in their ground tint, probably from the presence of animal matter more or less reduced to a coaly or bituminous consistence; but this colour of ground favours by contrast the display of the shells, corals, and other fossils, which are white or cream coloured. Fossiliferous stones of this character are of necessity unequal in structure and solidity, the matter interposed between the fossils, and binding them together, being either harder, or, as more frequently happens, softer than they are. Such a mass cannot take a uniform polish, and must wear unequally; for atmospheric and other destructive agencies act with greater energy on the softer portions. But this unequal wearing does not interfere with the use of the highly fossiliferous limestones for internal decorative purposes, to which, under the name of marbles, they are largely applied; nor does it, where the stone is compact, interfere with its application in external architecture. Several of the oolitic limestones contain, interspersed among their characteristic ovules, fragments of shells, occasionally in large number. Such shelly oolites, however, are in high esteem in England, and have stood, in well-known edifices, the wear and tear of all the destructive agencies to which they are exposed for ages.

2. *Silicious Limestones.*—Mixtures or combinations of silica and carbonate of lime occur frequently in nature, and as they unite, in certain cases, the good qualities of a sandstone to those of a limestone, they are unexceptionable as building materials.

In a well-known calcareous sandstone, that namely of Fontainebleau, we find the crystalline form of pure carbonate of lime assumed by it. Chert or hornstone, on the other hand, which is used, on account of its hardness, for making mill-stones, represents, in certain of its specimens, an exceedingly silicious limestone passing into silica, and in all cases too hard for a building material.

A moderate amount of silica is not prejudicial, but probably rather beneficial to a limestone in relation to architecture. Thus, Salisbury cathedral is built of a limestone quarried at Chillmark, in the neighbourhood of the cathedral town, containing 10 per cent. of silica; and the excellent condition of that edifice, as well as of Wilton Abbey, and many other buildings in Wiltshire, constructed of the Chillmark stone, amply proves its durability.

3. *Aluminous Limestones.*—This class of limestones is likewise named *argillaceous*, and owes its peculiarities to the presence, in the stones included under the title, of silicate of alumina or clay. Mixtures of carbonate of lime and clay are exceedingly common in nature; but few of them are sufficiently hard and compact to come within the category of stones. It will presently appear, however, that they are of high value, though not stony in structure, as sources of hydraulic mortar. Where they are thoroughly consolidated, they are equal to combinations of limestone and slatestone, and as such cannot be wanting in durability. One may be named,—the limestone from Totternhoe, near Dunstable, Bedfordshire, with which Woburn Abbey, and many other edifices in Bedfordshire and Hertfordshire have been erected. It is described by the reporters on the stones for the Houses of Parliament as "consisting of calcareous and argillaceous matter in about equal portions."

4. *Phosphatic Limestones.*—This variety of limestone has not as yet been recognised as a class, and perhaps scarcely deserves to be specially noted. It takes its name from the phosphate of lime and phosphate of magnesia, which, as they occur in the shells and other calcareous skeletons and marine animals, must be present in most limestones derived from them. Its quantity is never large, in general not exceeding $\frac{1}{100}$ of the weight of the limestone: occasionally, however, it is ten times more abundant, amounting to more than 1 per cent. on the stone. As calcareous phosphates are among the most essential, and at the same time least abundant constituents of the food of plants, limestone containing them is of special value for agricultural application; and, conversely, a phosphatic limestone is the least desirable variety of its class for architectural purposes, where the growth of lichens and other vegetable matters is objectionable.

Reference has already been made to the very uncertain nature of the information we possess concerning the conditions which favour the growth of plants upon stones. It does not appear even to have been ascertained whether sandstones or limestones foster their growth most. Speaking solely from a speculative point of view, it may be inferred, that as the materials for plant-growth are much more abundant in limestones than sandstones, the former would more readily cover with vegetable incrustations than the latter; and this view appears to be justified by the tenor of the Report on the Stones for the Houses of Parliament. Yet a very competent judge, Hugh Miller, refers to the village of Olney, in Bedfordshire, as "built of a calcareous yellow stone from the oolite, which, as it gathers scarce any lichen or moss, looks clean and fresh after the lapse of centuries." (First Impressions of England and its People, p. 277.) After all, however, the Olney stone must be an exceptional one, for the ancient ecclesiastical buildings of England, constructed of limestone, are notoriously spotted with lichens and mosses, at least in country places; but perhaps not more so than the sandstone buildings of equal age. The question must be open for future inquiry, and with it the further query, does a stone gain or lose in beauty by lichen incrustations?

In whatever way æsthetical judgment may be satisfied in reference to the lichen spots and moss stains on stones, however, it must sometimes be desirable to avoid them as long as possible. Where this is the case, the purest simple or magnesian limestone should be preferred; and where, on the other hand, a quick spotting is desired, the composite limestones, and especially those rich in phosphates, should be preferred.

5. *Bituminous Limestones.*—From the circumstances under which limestones have been formed, they must be liable to contain vegetable matter, derived from the water in which they were originally deposited, and animal matter, resulting from the decay of the shell-fish and coralline creatures from the tenements of which they have been mainly produced. These vegetable and animal remains have, in the course of ages, become converted into a carbonaceous or coaly substance, often accompanied by bitumen. In some cases, this matter is so equally distributed in the stone, as to give it the uniform dark colour so much admired in black marble. In others it produces streaks or veins, sometimes beautifying, sometimes disfiguring the limestone. Occasionally limestones, such as the white marble from Skye, discolour and darken when exposed to the air, in consequence, it may be supposed, of retained organic matter becoming carbonised by a change such as we are familiar with in exposed beds of coal. It is probably owing to a similar but less advanced change or decay, that certain limestones, when struck or rubbed, emit an offensive odour, and have been distinguished as a class by the title of *fetid*.

Bituminous limestones, accordingly, must not be rashly selected as building materials; but where not otherwise unsuitable, it is likely that their bituminous impregnation will make them more durable, by rendering them less permeable by air and water.

From what has been said, it will be seen that there is large choice of building materials among the limestones. Their greater softness makes them more easily wrought, at a smaller cost, and with less injury to the health of the workmen, than is the case with the sandstones. Their colour is generally pleasing, and they are not liable to iron-spots. Theory would indicate that they are less durable than the sandstones as a class, and this inference is borne out by the fact, that in Oxford, York, and other English cities, the decay of certain limestones employed in building has been so great in from twenty to fifty years, as to render inscriptions on monuments illegible, and to efface all the finer lines of carving. This, however, is not the general character of the building limestones, which, even in our climate, have endured, without undergoing serious decompositions, the storms of many centuries.

In reviewing the list of building stones now discussed, it is worth while to observe that there are special purposes for which each of the more important ones is adapted. Thus, granite is justly preferred for such a building as the Skerryvore Lighthouse; slate-stone for floor-slabs; and slate for roofing. Greenstone, uniting hardness to a texture which prevents its acquiring a polish and becoming slippery, is peculiarly suitable for causeway stones and road metal. Fine-grained, hard, compact sandstones, are superior to every other building material for the construction of edifices where delicate tracery and minute carving are exposed to the destructive meteoric agencies of a variable northern climate and a city atmosphere. Where, on the other hand, due protection can be given, the petrifaction limestones and true marbles can be economically wrought into pillars, slabs, wall-tablets, and the like, possessed of a beauty of colour and lustre such as no other stone can rival.

For general building purposes, sandstone or limestone will always be preferred where they can be procured. It would be folly, of course, for the inhabitants of Aberdeen to send to a distance for either, when they have inexhaustible supplies of granite close at hand; but where there is a choice, that beautiful rock is too difficult to work to be preferred to the calcareous or silicious freestones.

As to the relative advantages of sandstone and limestone, they are so nicely balanced, so far as ordinary buildings are concerned, that a small matter may be allowed to decide the choice betwixt them. The inhabitants of Bath are not likely to send to Edinburgh for sandstone, nor those of Edinburgh to Bath for limestone. Nor is there probably any district in the country where limestone and sandstone occur equally good of their kind, equally abundant, and equally accessible. Where these rare conditions are realised, limestone would be preferable for the humbler edifices, and for the less exposed portions of the more stately ones. Such a combination of limestone and sandstone is not uncommon in our older ecclesiastical buildings, and is being carried out to some extent in the new Houses of Parliament, where the Bolsover magnesian limestone is chiefly employed, but not to the exclusion of sandstone.

In conclusion, it must be admitted that much more requires to be done by professors of chemical science, in the way of analysis and research, before they can give great *positive* assistance in the selection of building stones; for at present we must confess we are at a loss to explain why one granite, or sandstone, or limestone, rapidly decays, whilst another, of appearance and analysis the same, is practically indestructible. But this only shows that our analysis has not been sufficiently full and minute to bring out the points of difference between the destructible and indestructible specimens of stone, not that such points of difference do not exist. We can already, however, negatively assist by pointing out, as already done, *certain* signs of destructibility and indestructibility in building materials.

ST. PAUL'S TEMPORARY CHURCH, KENSINGTON.

ST. PAUL'S TEMPORARY (IRON) CHURCH, KENSINGTON.

A TEMPORARY church has been fitted up in the grounds of the Vicarage at Kensington, and was opened on the 30th ult. by Archdeacon Sinclair. It affords accommodation for about 800 persons, and is the first temporary church of iron put up in the metropolis. The edifice consists of a nave 72 feet in length, 30 feet wide, and 24 feet high to the ridge; north and south aisles, 84 feet long, 13 feet in width, and 17 feet high; and a chancel of the same width and height as the nave, and 24 feet in length. At the end of the north aisle, immediately adjoining the chancel, is the vestry, 12 feet square; and the organ is placed in the corresponding portion of the south aisle. The porch extends the width of the west end, and has a depth of 12 feet. The roof, internally, is open, and of stained deal. The church is warmed by means of hot-water pipes, which traverse the walls. The seats are open, with panelled ends, and like the roof, are of stained deal. The whole of the building is externally of corrugated galvanized iron. It would not be difficult on a future occasion to give a more ecclesiastical character to such a structure externally. The arrangement is, that 5s. a year shall be paid for each sitting to the contractors, Messrs. Hemming and Co. of the Clift-House Works, in the parish of Bow. If the proceeds of the seat-rents do not suffice to meet the annual expenses, the deficiency is to be made up by the archdeacon: if a surplus is realised, it will be applied in aid of the fund for building a permanent edifice of stone.

Messrs. Hemming, we may mention, have contrived an iron hut for barracks and other purposes, which appears to possess several advantages.

SOME ACCOUNT OF CREWE HALL AND NANTWICH.*

ONE of the most prominent signs of the times in which we live is said to be the principle of combination,—that voluntary but most efficient act of mutual effort by which we explore the mine, construct the rail, bridge the ocean, and girdle the earth with a cord of lightning. Science, literature, and art, feel the influence and experience the benefit of this all-powerful principle, and the society to which these remarks are addressed is an evidence of its efficiency when applied to a particular branch of knowledge.

Another principle not less powerful, and perhaps more innate, has been of late called into extensive operation in connexion with unions for scientific and literary purposes; I mean the love of nature,—that unquenchable instinct in man's nobler part which every advance in intellect tends only to purify and exalt. Hence we find that every society of any pretension has its summer excursion. Some meet in general conclave to bring up the reports on every branch of science to the latest date. Others explore the mountains hammer in hand, and extract the wondrous tale of their geological history. Many wander through the lovely valleys of our land in search of fresh contributions to botanical science; whilst others, like ourselves, are more attracted by the ancient castle, the quaint manor-house, the hoary cathedral, or the quiet village church, nestling in its garden of graves. But whatever be the pursuit,—the free air, the lovely landscape, the out-of-door-enjoyment contributes much to its attraction.

> "Knowing that Nature never did betray
> The heart that loved her; 'tis her privilege,
> Through all the years of this our life, to lead
> From joy to joy: for she can so inform
> The mind that is within us, so impress
> With quietness and beauty, and so feed
> With lofty thoughts, that neither evil tongues,
> Rash judgments, nor the sneers of selfish men,
> Nor greetings where no kindness is, nor all
> The dreary intercourse of daily life,
> Shall e'er prevail against us, or disturb
> Our cheerful faith, that all which we behold
> Is full of blessings."

The Liverpool Architectural and Archæological Society has had its annual excursion every summer since its commencement, and many a pleasant reminiscence is called up by the allusion,—of lovely valleys and pleasant streams, of feudal castles and hoary mountains, of moving accidents by flood and field, of difficulties overcome, and enjoyments realised, "in spite of wind and weather."

The present year's arrangements called the society to Crewe Hall and Nantwich. * *

The situation of the Hall is agreeable and pleasant. A noble sheet of water extends eastward from the house, backed by woods and undulating grounds extending on every side. Before attempting to describe the building, a few words may be desirable on the history of the locality.

At the time of the Domesday Survey the township belonged to Richard de Vernon, Baron of Shipbrook. It is found in the middle of the twelfth century in the possession of Thomas de Criwa, with whose heirs in a direct line it continued down to the time of Edward I. when it passed by marriage to the family of Foulshurst. In the reign of Elizabeth it was sold, and after passing through several hands it was purchased by Sir Randolph Crewe (Chief Justice of the King's Bench in the reigns of James I. and Charles I.), a descendant of the original Crewes, the old possessors of the soil. There is something pleasing to contemplate in the spectacle of the youth going forth from the little town of Nantwich to devote himself to the study of the law, winning fame and fortune in the great metropolis, repurchasing the lands of his ancestors, building a mansion worthy of the times and of himself, and reinstating his successors in a higher position than that which his ancestors had lost. John Crewe, esq. his descendant in the fifth degree, was raised to the peerage in the year 1806, under the title of Baron Crewe, which is now enjoyed by his grandson.

Crewe Hall is a fine specimen of the manor-house of the Jacobean period of art. It is quadrangular in plan, the north and south sides being longer than the others. There was originally a small inner court, which has recently been covered and formed into a saloon on the ground floor. The exterior of the house is built with red brick, with white stone quoins and facings. The fronts are broken by slight projections and recesses, the projections being surmounted by curved and kneed gables with pinnacles. The windows are large, having stone mullions and transoms: several of the fronts have projecting bay windows. The red bricks of the exterior fronts are diversified by lozenge-shaped figures worked in dark blue brick. The principal entrance is in the south front, and presents a bizarre combination of columns surmounted by pilasters, with scroll-work, ornamental quoins, balustrades, and pinnacles. The cornice round the mansion is finished with an open-work balustrade. From a print in King's Vale Royal, showing the house as it then stood, it would appear that this balustrade has been subsequently modified from the original design. The chimneys are well grouped, and characteristic of the style. A well-designed stone balustrade surrounds the house.

The grounds surrounding the mansion, originally laid out in the formal stiff manner of the period, have been much altered, and retain very little of their original arrangement. The present noble owner has done much to improve the external aspect, by carrying out balustraded terraces between the house and the lake, laid out with parterres of flowers,—imparting a feeling of modern elegance, without detracting from the quaintness of their older style.

The interior is very interesting for its very characteristic style of decoration, though the interest, in an archæological point of view, is somewhat abated by the changes and alterations which have been made. It is only justice, however, to state that the alterations have been made with much judgment and taste, and that in the adaptations and changes called for by modern ideas of convenience, the antique feeling has in no instance been interfered with. This, in fact, to the antiquary, becomes rather a source of annoyance, since it is difficult, without careful examination, to distinguish between the new and old work, and the domestic arrangements have been so far altered as to render the building no longer an example of the *ménage* of a country gentleman in the early part of the seventeenth century. However, the decorations remain, though removed in many instances from their original site. The principal staircase is curious, both in its plan and its quaint carvings. The great dining-room contains a fine screen of wainscot, removed from the entrance-hall. This room, together with another called the carved parlour, exhibit very fine illustrations of the wainscot and plaster work of the period. The drawing-room retains the original ceiling with its pendants; but the wainscotting has been removed. The upper story contains a noble gallery, extending the whole length of the south front, with recesses formed by the projecting bay windows. The domestic chapel is neatly fitted up with dark wainscot.

Illustrations, both of the exterior and interior, will be found in Richardson's "Studies of Old English Mansions," first, second, and fourth series. The staircase is given in Britton's "Antiquities," and views are given in Ormrod's "Cheshire," and Lysons' "Magna Britannia." The building was commenced by Sir Randle Crewe, in the year 1615, and completed in 1636. Seven years afterwards it was garrisoned for the Parliament, taken by Lord Byron on behalf of King Charles, and again retaken by the Parliamentary forces. Fortunately, the building does not appear to have sustained much injury from these warlike operations.

On the whole, Crewe Hall presents many points of great interest to the architectural student. The combination of brick and stone mellowed by the hand of time during the lapse of 220 years, is agreeable to the eye. The design is pleasing in itself, and while sufficiently characteristic of the age and style, is free from many of the barbarisms which disfigure the greater part of the buildings of the Elizabethan and Jacobean periods. If this style is to be adopted at all for modern buildings, it would be difficult to find a specimen more free from objection and more worthy of careful study than the one now under review.

There is something in the quaint old English mansions of the latter half of the sixteenth and first half of the seventeenth centuries full of interest to a contemplative mind. They open out a chapter not merely in the history of architectural styles, but a far higher one in the progress and development of the human mind. The history of architecture requires to be rewritten, in one of its departments, and that probably the highest of all—the relation of architectural forms to the mental and moral condition of the races and periods in which they prevailed. If architecture be, as it has been well said, history in brick and stone, it must be the history not merely of dead matter, but of living, breathing thought, considered from a point of view calculated to throw much light on the progress of the human race.*

So far as we are aware, the field is almost an untrodden one. The only writer who has at all touched upon the subject is the eloquent author of the "Stones of Venice;" and were he to undertake the task of fully developing the subject, there is none so well calculated by his great talents and well-stored mind to do it justice.

To glance for a moment before quitting Crewe Hall, at the relation of Elizabethan and Jacobean architecture to the times of its production. The century, extending from 1550 to 1650, was one of the most stirring in the history of our country. Religion, politics, literature, language, all underwent serious, and, in some instances, radical changes. The minds of men, losing sight of their accustomed landmarks, eagerly sought for light and direction from any quarter. The spirit of freedom and political right was roused, never again to slumber. Literature, shaking off its ancient trammels, carved out for itself new roads to immortality, and especially distinguished itself in the drama—that living picture of human nature intensified,—which never flourishes but in times of intellectual vigour and action. It was the age of Shakspeare, the age in which Milton was nurtured, the age in which the genius

* Read by Mr. J. A. Picton, at a recent meeting of the Liverpool Architectural Society.

* On this subject M. Viollet le Duc, in his excellent "Dictionnaire Raisonné de l'Architecture," just published, thus observes:—"C'est difficile de rendre compte des transformations successives des arts de l'architecture, sans donner en même temps un aperçu de la civilisation dont cette architecture est comme l'enveloppe; car nous ne saurions admettre l'étude du vêtement, indépendamment de l'étude de l'homme qui le porte."

Bacon burst through the fetters of the ancient schools of philosophy, and pointed out the only sure and safe way for the advancement of learning and science. Now we cannot help thinking that this peculiar state of the English mind, experimenting, feeling its way, trying its strength, and occasionally indulging in quaint conceits and grotesque extravagances, is powerfully reflected, or we might rather say is crystallized, in the architecture of the period. Gothic forms and Gothic modes of thought had been equally departed from, but still lingered about the thresholds of our homes and the pages of our writers. Classical literature had already begun to exert a powerful influence, but had not yet interwoven itself into the texture of current ideas and daily thought, as it has done in more modern times. Between the departing faith of the past and the coming influence of the future, a space was left for originality of invention, which may appear odd, capricious, and in bad taste, but which unmistakably presents vividly before our eyes the form and pressure of the times. Examine the front of Crewe Hall or the screen in the dining-room. The mullioned and transomed windows of the former, and the clustered tabernacle work of the latter, exhibit the lingering mediæval feeling. The columns and entablatures in both bear witness to the influence of the classic revival; but the rich open scroll-work, the fanciful panels, the quaint carvings, the embroidered surfaces, evidence a buoyant sense of freedom, a joyous feeling of imagination, revelling in its own strength, peculiarly belonging to the age and country, and in close connection with the fairy festivities of the "Midsummer Night's Dream," and the wonders of the enchanted isle in "The Tempest."

The Elizabethan and Jacobean architecture is peculiarly English, and differs materially from the works of the same age on the Continent, and even in Scotland. Whatever be its merits æsthetically, it is a link in the chain of architectural history, and should be studied in a discriminating and candid spirit.

A pleasant drive of forty minutes through an open country somewhat flat, along rich pastures dotted with milch cattle, past clean tidy farm-houses, with their bright dairy apparatus visible through the half-open door; by straw-roofed cottages with timber framing, which have outlived revolutions levelling noble structures with the earth,—and we obtain at length glimpses of a small river winding peaceably through the meadows, full to the brim of its grassy banks. A church tower detaches itself from a mass of surrounding buildings, we turn a corner, and rattling up the *pavé* of a narrow street, we are in the market-place of Nantwich.*

* To be continued.

OUR COINAGE—THE PENNY.

Heraldry has no special representative in the periodical press: I seek therefore the aid of your columns; for architecture and heraldry are nearly allied. I doubt not that you are far better acquainted with the precious metals than with the coppers of the nineteenth century; still you can hardly fail to be the occasional possessor of a penny. It is a highly-respectable and ancient coin; of some weight in the world, and of a size that forbids its passing wholly unnoticed. One of my little boys has been laboriously studying a specimen, and has discovered that Britannia wields the toasting-fork (as he will keep calling the Trident) in her *left* hand: the little vagabond dares further to pronounce the lady's left leg to be out of drawing, and to aver that it would be hurtful to the feelings of any full-grown woman to sit on the edge of a round tea-board (as he irreverently calls the shield). But these are not the matters on which I would address you, although I concur with my boy in thinking, that the state of art in this country is but indifferently represented by our coinage.

As a humble student in heraldry, I wish to point out a highly penal offence committed by the author of our current *penny*, in the total omission of Scotland in the shield, on the edge of which Britannia finds so precarious a seat.

Every true-born Briton knows that the Union Jack comprises the Cross of St. George, gules—the saltire of St. Andrew, argent,—and the saltire of St. Patrick, gules. He knows also, that in order to accommodate the two latter saints, the saltire in our national shield is divided down the centre, half gules, half argent. He further knows that, as the field is azure, and as heraldry forbids the contact of two furs, the Irish saltire needs a line of metal (argent) by way of bordure, intervening between the gules and azure. All this the true-born Briton knows very well, because he sees it on every flagstaff in the United Kingdom.

The Mint medallist must therefore be no Briton proper, but some base Russian in disguise, otherwise he would never hold out so seditious a sign as that on the coin in question. You will there see no double saltire, but a single saltire with the bordure argent on either side, plainly with a view to seduce Scotland from her allegiance. The Scotch have been long wanting a grievance; here is a grievance for the whole Caledonian race!

Seriously, this omission must be an error arising from carelessness or from ignorance. In either case, let Sir John look to it. Let him consider what an explosion of patriotic wrath would burst over his head, if he were to omit the Lion rampant of Scotland from the royal shield that graces our half-crowns; yet such an error in the royal quarterings would be no greater offence to the Crown, than would the omission of Scotland's saltire in our Union Jack be to the majesty of the people.

I trust that after this warning, you and I, sir, may live to see, in the pennies of 1856, the noble art of Blazon vindicated, "the knavish tricks" of the enemy "frustrated," and the integrity of the empire secured. S.

COUNT DE LABORDE'S ATHENS.*

All admirers and searchers of Greek antiquity, from Leake downwards, have felt the importance of information on Athens during the last three or four hundred years, when, after the darkness of the middle ages, it began to emerge again from obscurity by the successive researches of antiquaries and archæologists. Still, the materials for a history of the Greek metropolis from the fifteenth to the seventeenth centuries are most scanty, and were mostly hidden amongst the neglected lumber of the libraries of Rome, Paris, Vienna, &c. It was, therefore, a fortunate occurrence, that while Count de Laborde was engaged on his splendid work on the Parthenon, collateral research led him to embrace the whole history and locality of this once famous city. The work begins with some extracts from Bondelmonte's Liber insularum, and the Portolani and charts of the fifteenth century, showing, however, the great ignorance which then reigned on that subject, although Athens had previously stood in communication with Florence and other parts of Italy, through the family of the Princes of Acciajuoli. The first document of any consequence is the usanonym "Viennensis," being a short description of Athens by a Greek author, in the middle of the fifteenth century. It had been discovered in a theological manuscript of the library of Vienna, and a reprint and *fac-simile* are given here. It bears the strange title of "The Theatres and the Schools of Athens," because the fame of the ancient wisdom and learning of Athens have been preserved so strongly in the whole of Greece, that many other monuments and ruins bore the name of schools (Dascalia). Another pious mistake also occurred then, viz. to refer all great monuments to some great men—viz. the arsenal of Lycurgus, as the Acropolis has been called during several centuries. Other like names were, the Palace of Themistocles, &c. To the "usanonym Viennensis" follow extracts from the sketch-book of San Gallo, also from the end of the fifteenth century. Then is a great gap in our knowledge of Athens during greater part of the sixteenth century, as M. de Laborde could find but scanty notices of H. Blancard (1537), on the Lion at the Piræus, and the Columns at Cape Sunium; A. Thevets on the obelisks, columns, and schools (!) of Athens, which were followed by the Greek letters of Zygomalas and Kabasilas.

* Athènes aux 15, 16, et 17me Siècles. Par le Comte de Laborde Paris, 1854. 2 vols. 8vo.

At a subsequent period decried diplomacy did some good here, by the appointment of consuls (French and English) at Athens. Lord Arundel also, the Duke of Buckingham, and even Charles I. imported fragments of Greek architecture and sculpture to England. Catholic convents were also established in the city of Minerva; and the Capuchin friar, P. Simon, purchased in 1669, the monument of Lysicrates, and built a convent close to it. It was, however, this very same P. Simon and his colleague, P. Barnabi, who first made a plan of Athens from the southern high banks of the Ilissus, whereon the principal monuments, churches, &c. were consigned. M. de Laborde has been so lucky as to find a copy of this plan, together with some MS. notes in the library of Paris, which he has copied in his work. Of the greatest importance was the mission of M. de Naintel, by Louis XIV. (1670), as he ordered the painter, M. Carrey, to make drawings of the pediment and other sculptures of the Parthenon, which was then still in its entire and complete state. In 1674 appeared the short but valuable description of Athens by P. Babin, of which only a very few copies are in existence. About this time Guillet's "Athènes ancien et moderne" also was printed, which, although its author had never been in Greece, but merely followed the plan drawn by the Capuchins, and the "Collectanea" of Meursius, was a very valuable compilation. The ulterior researches of Spon, Vernon, and others, fall within the later period of Hellenic and Athenian researches, sufficiently known to most readers.

WHAT HAS BEEN DONE IN ST. JAMES'S, WESTMINSTER?

In your recent review of the Report of the Cholera outbreak in St. James's, Westminster, you demand, with an emphasis to which your evident personal acquaintance with the scene and the circumstances of the outbreak gives peculiar right, "What has been done in the districts of which we have been speaking?"

I will tell you, sir, "what has been done." You know the pump in Broad-street: you know that there is good reason for believing that it played a very important part in the tragedy of last autumn: you say that "the evidence of connection between the well-water and the loss of life seems so conclusive as scarcely to admit a doubt:" you have, moreover, dwelt upon the fact, so incontestably established by Mr. York, of the gross pollution of this well-water by percolation from an adjoining cesspool—"a state of things" which you characterise as "prejudicial to health in the highest degree, which, nevertheless, may be paralleled," you do not hesitate to say, "in hundreds of places in the metropolis!"

"A state of things," one might almost be tempted to hope, calculated to make an impression even "upon parochial authorities." If, however, any one, in reading your remarks, ventured to indulge in such a hope, let him know, once for all, that he is of very sanguine temperament.

"Go preach to the coward, thou death-telling seer!"

is the answer of the St. James's Paving Board, to any one who thinks to discompose them about any such trifles. "Why make such a fuss about a matter that is past and gone? Do you want to frighten the people into the cholera again, by reminding them of it? Depend upon it, man, fear does all the mischief. Talk about the water! Why, there's Bumper has lived fifty years in the neighbourhood, and has had his 'cold without,' mixed from this very water every night, and is none the worse for it. And Pumper, the teetotaller—how about him? And isn't there at this very moment a memorial before the Board, headed by Stumper of the vestry, and Thumper of the Poor Board, complaining of detriment to their health, through being deprived of their accustomed beverage during the temporary locking-up of the pump pending the investigation. To say nothing of Grumper, the worthy landlord of 'The Parish Hampden,' whose customers are indignant at the bare idea of not being permitted to mix their grog with the water they like best."

Be assured, sir, that this parochial Redan is a wonderfully strong fortress, untenable even

when taken, as you shall now learn from the account of "what has been done."

It appears from the report that so early as September 7th, Dr. Snow had "an interview with the Board of Guardians, the result of which was that the handle of the pump was removed the next day." Soon, however, did the handle return to the scene of its labours, till at length a new enemy, in the shape of the committee, laid hold upon it, and enchained it, straightway proceeding to excavate and explore the subterranean mysteries of well and cesspool with all their deadly contrivances for annihilation of human life. Never was Redan or Malakhoff more infernally mined than this mute mock-looking plague-battery. But what were the Paving Board about all this time, that they submitted to these invasions of their territory? Why did they suffer the enemy, under cover of a flag of truce, to lay bare the apparatus of destruction? Were they taken by surprise? Not they. You have heard, sir, of magnanimous commanders leading spies through their camp, showing them everything, and then sending them off in contempt. Even so with the Paving Board. They know their strength. Why should they care for this petty prying into their affairs? It would only make their final triumph the more glorious and complete. They even disdained to take the paltry advantage of unfettering the handle before the enemy should have had time to marshal his forces for the grand assault. The pump-handle should rise amid the din of battle. In this heroic state of mind did they await "The Report." You are aware, sir, of the power of artillery that was brought to bear upon them. A section was for capitulating, but the majority were of sterner stuff than to yield even to a *feu d'enfer*. Up rose the pump-handle, and the enemy retired discomfited and forlorn. Day and night, for nine long months, had he toiled with his zigzags, and his parallels, and his batteries, but had known neither the strength of the fortress, nor the iron resolution of its defenders.

High festival was held that day in Broad-street, to celebrate the victory of the Board and the defeat of the foe. Full many a copious stream, arrears of libation to offended Cloacina, did the pump send forth. Loud and long the exulting shouts of children working the handle in very wantonness of exuberant joy, whilst ever and anon some veteran hero of a hundred jobs would pause in his passage through the street, to smile complacently upon the exhilarating spectacle. But who shall depict the radiant countenance of Grumper, as he once again tempered the parochial grog with the long-lost fluid, or hazard a description of that evening's *réunion* in his parlour, as toast followed toast, "Long live the Board!" "Confusion to the Committee!" "Success to the Pump!"

I imagine, sir, that you will no longer wonder why the committee recoiled in dismay from an attack on the cesspools. Take my word for it, there is more than one man on the Paving Board prepared to die in the last cesspool.

Mens Sana in Corpore Sano.

METROPOLIS LOCAL MANAGEMENT ACT.

Very much will depend on the election of proper persons in the metropolitan parishes to serve as vestrymen under the new Act. The churchwardens of some of the parishes, feeling the importance of this step (those of St. Martin's, for example), have issued a circular, calling upon their fellow-parishioners to exercise proper caution in the selection. A brief reference to some of the more important features of the Act will show how great are the powers which will devolve on the vestrymen:—

All the sewers of the parish now vested in the Metropolitan Commissioners of Sewers (except the main sewers) will be vested in the new vestry; with powers to repair and construct new sewers, to compel owners of houses, at their own expense, to construct drains into the common sewers, and in default, to perform the work, and charge the owner; no house to be built without drains constructed to the satisfaction of the vestry; all new erections to be for certain purposes under the supervision of the vestry;* penalties imposed upon proceeding without consent of vestry; power of vestrymen at all times to inspect dwelling-houses, and open the ground to inspect the state of the drains, waterclosets, and cesspools; to provide and maintain public conveniences; to pave, light, water, cleanse, and improve the parish; to compel owners of property to incur various expenses, under considerable penalties; to control and regulate the occupation of cellars and underground rooms; to water streets, and to sink wells and erect pumps for supplying water to the inhabitants; to appoint and pay crossing-sweepers; no hoard or scaffold allowed without consent of vestry; to appoint medical officers of health and inspectors of nuisances; powers to purchase lands.

Further, the vestry is directed to execute all the powers given by the "Nuisances Removal and Diseases Prevention Acts," and is empowered to order rates to be raised and levied on the inhabitants, with the poor's rate. It is advisable that every parishioner should well consider the Act, and we cannot do better than recommend the edition of it, just now published,* by Mr. J. J. Scott, barrister, wherein care has been taken to facilitate reference to every portion of it by the subdivision of the various clauses, summaries at the heads, and an elaborate index. It contains, too, the various sections of the Metropolitan Buildings Act, which confer powers upon the Metropolitan Board of Works.

* We have in type those clauses of the Act which are more immediately connected with the Buildings Act, and shall publish them in an early number.

PROVINCIAL NEWS.

Sheffield.—The Sheffield ragged schools committee having accepted tenders for building new schools in Peacroft, the work has been commenced. The new schools are estimated to cost about 1,000*l.* and towards this 600*l.* have been realised. The laying of the chief stone is to take place in a few weeks.

Wisbech.—The following tenders have been given in to the Local Board of Health for the main sewerage and other works in the district:

G. Munday, Wisbech	£11,870	0	0
R. Goodison, Lewisham	10,004	0	0
T. Bothamley and W. Merryweather, Little Bytham	7,899	0	0
R. Barnes, Westminster	7,811	0	0
C. Garrett, London	7,555	0	0
W. Dethick, Hackney-road	7,541	0	0
Friend and Hammill, London	7,466	0	0
R. T. Carlisle	7,404	5	1
Durham and Pearson, Sutton Marsh	7,300	0	0
Swithinbank and Higginbotham, Gloucester	7,300	0	0
J. G. B. Marshall, Westminster	7,259	11	6
J. Phillips, Holloway	7,196	0	0
G. Savage, Northampton	7,145	15	0
T. Gardner, City-road	6,992	0	0
Coker and Co. Ware	6,910	0	0
J. H. Brown, Southampton	6,850	0	0
J. Yeoman, Kentish Town	6,780	0	0
Armstrong and Hudspeth, Alnwick	6,539	4	3½
W. Hill, Whitechapel-road	6,350	0	0
Lee and Lavers, London	5,850	0	0
Pocklington and Sparrow, Sheffield	5,520	0	0

Five or six out of the lowest of the twenty-one tenders were ordered to be selected for further consideration by a committee appointed for the purpose. The estimates provided that the drainage of private properties was to be separately charged for: these charges varied from 8d. to 1s. per foot and more, according to the depth of the drain.

Long Sutton.—A plan for the removal of nuisances in this town, and for draining the same, has been deposited with the vestry clerk for inspection of the ratepayers. The report of the surveyor of sewers states that the natural falls are so small that no system of barrel drainage could be made efficient, and therefore, proposes a main drain of glazed stone and ware pipes, 15 inches in diameter, discharging into a brick tank, 20 feet in diameter, and 20 feet deep. From this tank it is proposed to pump the refuse by a steam-engine of 10-horse power, into another tank, provided with straining apparatus for collection of the solid matter. The estimated cost of the whole is 2,574*l.*

Leicester.—At a recent meeting of the Leicester Corporation, a letter was read from Mr. Wicksteed, consulting engineer, announcing the completion of the main or deep sewers of the town. Mr. Wicksteed states that the run through the sewers is good, and that the process of disinfecting the sewage water, carried on at the Patent Solid Manure Works, is complete. The water, he continues, passes through their works, and is delivered into the Navigation, not only in an inoffensive, but in a drinkable state; and this operation has been going on without interruption day or night since 18th April last.

* London: Knight and Co. Fleet-street. 1855.

Bedminster.—The British Schools, Back-lane, Bedminster, having been enlarged and improved, were re-opened on Tuesday before last. The new school-room is 60 feet by 36, and the class-room 12 by 12. They will accommodate 300 additional children: the under room will take 250, thus making provision for the education of 550 poor children. The mason's work was done by Mr. Bevan; the carpenter's by Mr. Banner; the plasterer's and painting, by Mr. Hill; and the plumbing and glazing by Mr. Osborne.

Birmingham.—Great preparations are being made by the corporation and council of the Midland Institute to give to his Royal Highness Prince Albert a welcome befitting the Consort of her Majesty, and the errand upon which he will come. Birmingham has much to gain by the success of the scheme on foot.

Warrington.—The foundation-stone of the new market was to be laid on Thursday, by the mayor.

Liverpool.—The marine surveyor of Liverpool, Lieut. Lord, has announced his intended resignation of the surveying department of his official duties. He expressed his willingness to undertake the duties of his office on shore, but required his present salary of 600*l.* per annum to be increased. The subject has been referred to the Marine Surveyors' Committee, with the understanding that the salary is not to be increased beyond its present amount.

Bury.—The local Workhouse Building Committee met Mr. Holmes, the architect, on Wednesday before last, as to alleged errors in the erection of the workhouse. The guardians alleged that the beams intended to support a belfry were much too heavy, and that others, one-fourth the strength, would have sufficed. Mr. Holmes, in explanation, asserted that the plan of the turret had received the approval of the Board, and the beams had been made stronger than otherwise because the walls were not of sufficient strength to bear the additional weight. He believed that if the alteration proposed by the guardians were to be carried into effect, the building would be down in twelve months. Some of the points complained of, the architect attributed to the blunders of the guardians themselves, and he refused to give up the work to others who might be incompetent.

Bolton.—On Tuesday before last a *soirée* was held in the Temperance-hall here, to celebrate the completion of the new premises in Oxford-street, for the new mechanics' institution. The premises contain large reading and class rooms, library, &c. The *soirée* was attended by about 600 persons, and afterwards some 300 more were admitted. Lord Stanley presided, and was supported by the principal townsfolk. Lord Stanley promises well.

Penrith.—The building of baths and wash-houses has been commenced. The contracts for completing the design come within the limits of the proposed capital, viz. 2,500*l.* in shares of 1*l.* each.

Peebles.—The local Gas Company are getting erected a new tank and gasometer, which are nearly completed. The new tank, according to the *Border Advertiser*, is 25 feet in diameter, and 12½ feet in depth, capable of containing 5,000 feet of gas, the old tank being only calculated to contain 2,000 feet. The estimate for the new tank and gasometer is 400*l.* exclusive of the digging or founding work.

St. Paul's Cathedral.—Your correspondent "P." in last week's *Builder*, says he "was struck with the unsightly appearance of the organ. It is *some months* since I myself observed the same thing, and I am really concerned to see that so late as last Monday the Latin inscription, serving as our only public recognition, "Hujus ecclesiæ et urbis conditor," was missing from its place,—haply lying (as I saw it last) in chaotic fragments on the pavement of the church. Is *this* City memorial to share the fate of the crypt of Gerard's Hall?

W. Y.

THE "SAINTE-CHAPELLE" OF PARIS.

[See page 505, *ante*.]

CHURCH-BUILDING NEWS.

Worsley.—The new Independent Methodist Chapel just completed at Roe-green, near Worsley, was opened on the 7th instant. The building is rectangular in plan, 48 feet in length and 33 feet in width. The style adopted is Early English, and the materials used in the section are red brick, with St. Helen's stone, and white brick dressing. The front, exteriorly, is divided into three compartments, or bays, by buttresses of white bricks, which are continued by a slight projection above the water-tables, up to what may be termed a parapet to the gable, also of white brick; on the top of which is a moulded stone-coping, and moulded corbels and cusped gablets at the springers, and terminated at the apex by stone gablets and an ornamental finial of terra cotta. In the centre compartment is the entrance doorway, with jambs, arch, and label of splayed and moulded white bricks; and outside the label is an arch of blue bricks. Over the doorway is a large three-light window, resting on a moulded string of white brick; and above this window is a small triangular window, which serves to relieve the space between the head of the three-light window and the lower apex of the white brick parapet. In the side compartments are single-light windows resting on white brick strings. The sides of the chapel are each divided into five bays by white brick buttresses, and there is a double-light window in each bay on white brick strings as before. The whole of the windows have jambs, arches, and labels of white brick, with blue brick arches outside the labels. The windows are glazed with cathedral glass. The roof is entirely open. The principals have semi-circular laminated ribs, springing from moulded stone corbels. Each rib is in six thicknesses of 1½ inch red pine deal, steamed and bent. The whole of the timbers will be stained and varnished. At the rear of the chapel is a vestry for private meetings. The walls are all plastered, rough stucco in the interior, and line drawn in imitation of stone. The chapel will be heated by Walker's patent stove, placed in a chamber beneath the floor. There are no galleries, and more than one-third of the sittings are free. The architect was Mr. Sugden, of Leek, under whose direction and superintendence the works have been executed by Mr. Pollitt, of Worsley.

South Wales.—An ecclesiological movement has long been at work in and around the ancient town of Cardigan. The churches of Tremayne, Verwick, St. Dogmell's, and Kilgawen have either been rebuilt or thoroughly restored; and although neither possesses any great artistic merit, are still highly creditable to those whose liberality aided and directed the work. To these may be added the old parish church of Cardigan, now being reseated throughout; the church at Llanfair Nantgwyn, about to be almost entirely rebuilt; and the new churches now rising at Aberpoth and Llandugwydd. The three last-named churches are being carried out, together with others in the same neighbourhood, from the designs and under the superintendence of Mr. Withers, of London.

Derby.—The alterations for some time in hand at St. Mary's (R.C.) Church here (the first work of the late Mr. Pugin) are almost drawing to a close. The aisles have been prolonged into cast end chapels, one 60 feet long by 22 feet wide (which is used for daily Mass, and school children on Sundays), the other small, and intended for the reception of a Pieta group, from a design of Mr. John Powell, which appeared in this year's Exhibition of the Royal Academy. The additions also comprise an extensive sacristy, or series of sacristies, fitted up with conveniences for carrying out the services, and which are built, together with the chapels, in the Decorated style of Gothic architecture, the Decorated being added to the Perpendicular style of Gothic. The wooden altar and triptic have been removed, and replaced by one carved in Caen stone and marble. The floor will shortly be laid with Minton's encaustic tiles. The chancel is divided from the nave by a wrought-iron screen, with brass ornaments. In the chancel the ribs of the groin have been gilt, and the panels or spandrils ornamented with foliage and angels. The walls have been also gilt and coloured. The decorations do not include the usual stars and fleur-de-lis on blue ground. The three east windows are of perpendicular glass from Messrs. Hardman and Co.'s, of Birmingham. The whole of the works have been carried out from the design of Mr. E. W. Pugin, assisted in the decoration by Mr. J. Powell, who is also the designer of the glass.

Preston.—The new cemetery here is being opened to the several Church denominations amongst whom it is divided. The whole is comprised in an area of forty-five acres, situate in the township of Ribbleton. Thirty-six acres are apportioned to the Church of England, the Roman Catholics, and the various dissenting bodies. Of the remaining nine acres, eight at the south-west corner remain unapportioned, and one is occupied by the chapels of the various religious denominations, the entrance lodges, &c. A small chapel, in the early English style of architecture, has been erected in each of the three divisions; and the ground is intersected with winding walks. The whole is enclosed by a stone wall, surmounted by a high iron railing. After passing through the entrance-gates, to the right is the unconsecrated portion devoted to the use of Dissenters. Here a chapel has been erected, 64 feet by 22 feet, consisting of carriage porch, inner porch, chapel, and robing-room. At each end of the carriage porch is a buttress, finished above the string course with open wrought and traceried sides, with cross stays, open timber roof, and carved brackets. Above the roof of the chapel, in the form of a cross, rises the bell turret, supported by ornamental buttresses, with canopies, moulded string courses, carved bosses, and finials. The turret is surmounted with a spire. At the termination of the roof the turret is changed by arches into an octagonal form, and is carried up to the belfry by tracery canopies with moulded weatherings and carved terminations. The belfry, the total height of which is 55 feet from the ground, is open at the sides with eight lights and trefoil heads, with hood mouldings and carved terminations. The windows of the chapel have two lights, with foliated heads. The east window is a triplet lancet, having over it a trefoil gable light. A three-lighted window, with a high-pointed foliated head, appears in the western gable. To the left is the ground set apart for the Church of England, recently consecrated by the Bishop of Manchester. The chapel consists of a nave, side aisle, vestry, and robing-room, and a tower and spire. The nave is 65 feet by 26 feet, and is separated from the aisle by a stone arcade, consisting of five arches. The side aisle is 40 feet by 10 feet, and the nave and aisle windows are two-lighted. There is a carriage porch through the tower, and archways to the entrance to the chapel from the porch. The spire, with the tower, is 90 feet in height from the ground. The exterior of the building has buttresses, and the angles of the tower are supported by buttresses. In the interior the east window is five-lighted, the west window four-lighted. The north side of the cemetery is set apart for the use of Roman Catholics, and was consecrated on Tuesday, in week before last. The chapel consists of nave, 52 feet by 25 feet, chancel, vestry, tower, and spire, and an open porch in the tower. The chancel is 20 feet by 9 feet. A rather low spire crowns the tower. In the interior of the chapel, the double-mullioned windows have been used for the side lights to the nave. The west window has four lights, and the east window three lights. The whole of the chapels are of random coursed rubble work, with Longridge stone dressings. The sittings in the inside and the roofs are of Baltic timber, stained as oak, and varnished. Minton's coloured tiles compose the floors. The roofs are covered in with blue slate from the Penrhyn quarries, surmounted by crested ridge tiles. Mr. T. D. Barry is the architect of the chapels and lodges, and the laying out of the ground has been entrusted to Messrs. Myres and Veevers, of Preston. Mr. Armstead, contractor, has executed the masonry, Mr. T. Turner the carpentry work, and Messrs. Ferguson and Whitwell the plumbing and glazing.

Bishopwearmouth.—The new cemetery at Bishopwearmouth is situated about a mile out of the town, and consists of four fields of 36 acres. There is now in the process of erection a brick ramped wall, 8 feet in height, to surround the whole. There are also to be two chapels, built in the Gothic style of architecture, from designs by Mr. Moore, of Sunderland, architect. These chapels will be built in different places for the use of Churchmen and Dissenters. A portion of the ground is to be set apart for the burial of Jews. There are two lodges to be built. The bricks used in the erection are made from the local clay. In the grounds the works are making progress under Mr. Neal, contractor.

Glasgow.—A site for the new Free Church Theological Hall here has been obtained in the vicinity of Woodlands terrace. It will form one of the principal entrances to the West-end-park.

CAUTIONS ON CHURCH BELLS.

I am glad to see you have published a suggestion, which has also been copied into the *Times*, that the old practice of furnishing churches with peals of bells should be more frequently followed, now that we have got past the times when everything not strictly utilitarian was condemned as Popish, or unchristian. But I take the liberty of adding to that suggestion what I am convinced is a very necessary caution, viz. that in this, as in other points of church building, people should not be so ambitious as they generally are, to get grand effects out of insufficient materials.

There are two ways in which this mistake is committed with regard to bells. The first is the simple one of putting more bells into a peal than is suitable to their weight. I was lately consulted about a clock to strike the Cambridge quarters, on a peal of twelve bells; and I was astonished to find the tenor is only 19 cwt.—a bell which in olden times, even in the last century, they would never have thought of making the tenor of more than eight. I see, too, in the paragraph I have referred to, 14 cwt. suggested as a suitable tenor for a peal of eight. The six larger bells of such a peal (if good ones), would make a nice peal of six; but six bells of that weight are only fit to be the first six, and not the last six, of a peal of eight. The best of all peals of eight is in the key of E flat, a favourite peal with the old bellfounders; and it requires a tenor of 30 cwt. to do it justice. This was the old Doncaster peal, and a much better one than the heavier peal, with a thinner tenor, that was substituted for it in 1835.

The other mistake is far worse, because it produces not *too many* bells to be rung in a peal, but a whole peal *too bad*. It is the miserable device of making bells of a deep note, by diminishing their thickness instead of increasing their size and weight proportionally. I have just now said that this was done to a small extent and with bad effect, in the peal lately burnt at Doncaster. It is now done to a far greater extent, and with far worse effect, systematically, by one of the only three makers of large bells in England, and not for want of warning of what the effect would be, or of complaint about what it had been in peals already made by him. If ever I hear the larger bells of a peal (which are always thinner in proportion than the small ones, even when right), of a clanging, *potty* sound, instead of a full rich one, I know immediately where they have been cast. And I believe I can tell equally well the birthplace of bells like those of St. Paul's, Knightsbridge, with a dull, harsh sound, as if they were made of something else than bell-metal, or of bell-metal cast unsoundly.

The old-established bell-founders are, of course, very angry at my saying, at the Royal Institute of Architects lately, in a discussion reported in the *Builder*, that the art of bell-founding had retrograded rather than advanced. They will find that Professor Wheatstone, judging from the three successive attempts of the two founders I have alluded to, at the Royal Exchange, has expressed the same opinion in the Parliamentary paper lately published about the Westminster clock and bells. The experiments there mentioned as in progress at Messrs. Warner's, have confirmed most of the opinions I then expressed. I hope before long to be able to publish, in some form or other, some definite conclusion from these and other experiments now in progress; and that the time is come when bell-founding has seen its worst. In

the mean time, I wish to caution church builders against being tempted, either by low estimates, or low notes, or high-numbered peals of small weight, into ordering such an expensive article of ecclesiastical furniture without some very sufficient guarantee of its quality, of which bell-ringers, rather than mere musicians, are generally the best judges.

E. B. Denison.

MEMORIALS.

The Huskisson memorial window, designed by Mr. Digby Wyatt at the request of Mrs. Huskisson, has been put up in the north aisle of Chichester Cathedral. The subject is "The Last Supper." Three tables are introduced, thus affording scope for the introduction of additional figures in the side lights. Above are small sitting figures of angels, with musical instruments; and the whole is surmounted by such symbols as the dove, the entire subject being relieved on a richly-traced background, mingling geometrical with floral and other forms. The full-sized cartoons were made by Mr. Clayton, under Mr. Wyatt's direction; and the glass was painted by Messrs. Gibbs.——A monument is about to be erected in the nave of York Minster, to the late Archbishop of York, by the Harcourt family. The sculptured figure is recumbent and in full canonicals: the wig is to be regretted. The design was by Mr. Noble.——It is proposed to erect at Manchester, in front of the Infirmary, a bronze statue of Watt, on the pedestal corresponding to the one on which the statue of Dalton has lately been placed. The same economical plan that was adopted in the case of Dalton's statue is suggested for that of Watt: as it is supposed that it would not be possible to raise the requisite sum for an original statue, it is intended that a copy be made of the statue of Watt in Westminster Abbey, the estimated cost of which would be 900*l*.——A monumental slab, designed by Sir C. Barry, has been erected at Dowlais, over the remains of the late Sir J. J. Guest, at the desire of his widow and family. The centre slab is of red Cornish porphyry, and the columns the same: the rest of the ornamental work is in Derbyshire alabaster.——Mr. Evan Thomas has submitted to the Vivian Monument Committee at Swansea, his designs for the proposed statue of the late representative for that borough. The committee approved of the design, as being well adapted for the intended site, the open space in front of the Guildhall. The committee requested Mr. Thomas to furnish them with a design of a suitable pedestal for the bronze statue. ——From Berlin, says the *Literary Gazette*, we learn that the sarcophagus of the late king of Hanover, which is now being shown in Professor Rauch's studio, is to be forwarded in a few days to Herrenhausen, where the monument to the late queen, also from the chisel of Rauch, is to be erected. The sarcophagus is of marble, with the statue of the king in a recumbent posture on the cover: the head leans on a cushion, the body is clothed in the hussar uniform, and enveloped in the royal mantle.

RESTORATION *v.* DESTRUCTION.

If the arguments of an old member of the York Architectural Society, trying to justify the grievous mutilation of the chancel of Spofforth Church, are to stand good, we may soon introduce the principle of last century, viz. the wholesale destruction of our ruinous churches, and the replacement of them by our own so-called improvements. If by restoration we are to understand a return to the original state of a building in its very first stage according to the scale that *our funds permit*, we shall assuredly have to destroy most of our pointed work, to restore the old Norman or Saxon, as the case may be; for there are few churches restored that do not in some part show traces of the original Norman work, whatever else may have been superadded in later times. If this is really to be admitted as a principle of restoration, we may tremble for our cathedrals, and our best examples of ancient architecture, which may be speedily reduced to their primitive rudeness and small dimensions, on the plea of "bad repair" and want of funds. It is surely a wretched argument for the destruction of a fine chancel, that it was larger than was required for the use of the parish. If we were to apply the same rules to our restorations in other cases, we should sacrifice our finest buildings to the shabby utilitarianism of the slop builder; and if we cannot run up our new work at a few months' notice, it will follow that we must prefer our cheap and nasty substitutes, and ruthlessly destroy what time has spared us.

What would have been said had the church of St. Mary Redcliffe, Ely Cathedral, or a hundred other fine buildings, been "restored" in the same fashion. The chancel was too large, it is said. Screen it off, then, and as funds come in, give it that loving and reverend repair and restoration foot by foot, nay, inch by inch, if it cannot be done more quickly. Forego for a time the little luxuries of encaustic tile and stained glass: don't throw away money on those worse than useless appendages, pew doors; and do not think that, because a restoration cannot be done at once, it is therefore necessary to destroy what cannot be now restored. Rather let us have a piece of interesting ruin than nothing at all, and wall off the ruinous end. The remark that the indication of the former chancel should be removed is characteristic: like the maid who breaks the china cup, and throws away the pieces to prevent detection; like the pavior, who throws sand over the mistakes in his work, or the jerry builder, who daubs his compo over rottenness, he would smooth over the evidences of the shabby act. Nay, let them remain: perhaps at some time, from these stray bones a more loving hand may restore to its pristine beauty the desecrated remains.

E. W. C.

GAS IN SEWERS.

In the forenoon of Friday, the 19th, that portion of Brompton lying between Alexander-square and Pelham-crescent was disturbed from its habitual quiet by a violent explosion, which was, fortunately, attended with more alarm than positive damage to the inhabitants or to the locality. For some days past there had been an escape, we are told, from the pipes of the London Gas Company, which was undiscoverable, and in the course of tracing it, it was found that the main was carried through the crown of the sewer, under the Brompton high-road. A junction showing itself in the sewer, the very unsafe means of testing its tightness, namely, by the application of a light, was resorted to: the connexion was as it should be, but the light caused the gas that had accumulated in the sewer, mixed of course with the atmospheric air, to explode: this, acting in the confined space, forced up the heavy cast-iron covers to the man-holes, to the great danger of the passers by, forcibly dislodged the bell-traps, and disturbed the drains in some of the houses. In one case of which we are cognizant, it displaced the York stone paving all along the course of a 12-inch drain of rebated brickwork, without doing any apparent damage to the drain itself. Had there been any men in the sewer, not an unusual occurrence, loss of life must have ensued. This accident should induce caution.

VISITORS IN PARIS.

I have read, on my return from Paris this week, your article on the state of the health of that capital, and coincide with you in every line. I only regret the Emperor may not, perhaps, have an opportunity of reading such an excellent article, which is but too *véridique*. Pray do not relent in your exertions.

During my residence, I could not help noticing the bad smell prevailing in many parts of that now beautiful city.

The day before my departure, his Majesty had approved of a report presented him by the corporation for the pulling down of 5,000 houses.

Paris next year will be supplied with water *à l'instar de Londres*, and the Seine will be canalized from Rouen to Paris, besides the new Boulevards about to be laid out, the extent of which will be nearly five miles each, commencing from the Lyons Railway and Strasbourg Railway.

L. F. De P.

Will you permit me, through your columns, to thank your correspondent "D. W. R." for his useful hints, in a late number, to intended visitors to Paris. I took his advice most catholically,—always asked for "*mon addition*" after dining; for "*une groseille*," "*un café*"—in fact, for nearly everything eatable, in the singular number, even to "a leg of mutton *à la female gardener*," whatever that may mean; dined in the Palais Royal at 2 francs 50 centimes, and lodged at the Maison de Goest, Rue Neuve, St. Augustin, No. 46, "*au cinquième*," and I believe occupied the same room as your correspondent "D. W. R." but Mdme. De Goest was not sure upon that point. It would not further identify the room if I were to say it contained a milk-jug and slop-basin for matutinal ablution, a cambric handkerchief you are expected to regard as a towel, and a large clock with a gold face, apparently afflicted with an internal complaint, that makes hideous noises through the night; as I believe these are the usual concomitants of all French bed-rooms.

I entirely agree with your remarks on the defects of the Paris Exhibition, and the causes thereof, and your commendation of the works of our artists, which really show to great advantage beside the dull chalk-colouring of Ingres and Decamps, touching which the feuilletonists (M. Gautier at their head) throw themselves into such wonderful ecstacies of frenetic admiration. In water-colour the English are quite alone, and every Frenchman with whom I have conversed has acknowledged our supremacy in this branch of art. As to architecture, as you observe, the French are inadequately represented, and you must look in the Rue Menars, Rue de l'Alma, Rue St. Honoré, and not in the Palais des Beaux Arts, for proofs of their progress; and in design and constructive skill, I would particularly mention a house in the Rue de l'Alma, by M. Leroy, as a very pleasing and correct specimen of modern French architecture. In the Ecole des Beaux Arts there are exhibited the designs to which the annual prizes for the best design for a School of Elocution were awarded, also very commendable, and two out of three bear strong marks of the peculiar modern style which has produced the Library of St. Geneviève, the Ecole des Beaux Arts, and many more recent buildings in Paris.

Palladio.

A NEW EFFECT IN WINDOWS.

I have lately found that by the following simple process a very beautiful effect may be produced in stained glass, adapted for ecclesiastical purposes, at a very moderate price. Take some pieces of flashed glass having a clear pattern *cut* upon them, and unite any two of different colour and pattern. The result will be a design of great beauty of form, richness of colour, and especially of a sparkling brilliancy, almost unrivalled in any other kind of glass. I have had some leaded up in diamonds, and the effect is so pleasing that they will probably be adopted in the chancel of a church which I built some years since, and about which my opinion had just been asked. If the makers of this sort of glass would manufacture it specially for the purpose, the result would be doubtless still more satisfactory; but with the ordinary specimens any of your readers may satisfy themselves of the truth of my statement. The kinds of pattern best adapted for the purpose are stars, crosses, circles, and generally good geometrical forms. I may add that the expense is very trifling, considering the effect produced, as the glass in single colours is manufactured at a very low price, and the process of combining the two, by which the rich effect is produced, costs comparatively nothing.

Edw. Ellis.

REMAINS IN BEAUFORT-ROW, CHELSEA.

A correspondent has favoured us with particulars of some remains cut into during an excavation now in progress for a new sewer in Beaufort-street, leading to Battersea-bridge, Chelsea. "It occurred to me," he says, "that such relics of a barbarous age, in bricklaying (namely, of a time when stability and consequent durability were ignorantly viewed as amongst the essentials in house-building), might, peradventure, be the vestiges of some mansion of note, and entitled as such to a place in my Antiquarian Note-book; and I consequently became more heedful of what was doing, especially when I one morning heard it declared, with some confidence, by a bystander, that these fragments undoubtedly belonged to an old residence of a duke of Beaufort, said to have stood here; and that the porter's lodge which had belonged to this same dukely dwelling, was even now standing, and was, in fact, no other than the well-known old Clock-house and Herb Distillery still extant, in humble guise, at a short distance hence, in the King's-road. The principal portion of the wall in question appeared, then, to me, to extend for about 80 feet opposite, and northward of a snug dwelling, on the east side of the street, named Victoria Villa. Its thickness, judging from that of portions running off from it at right angles, might fairly be considered to be not less than 3 feet. Its depth for about 45 feet of the southernmost portion, appeared to extend to about 7 feet below the roadway, whilst the depth of its northern portion was only 3 or 4 feet. At about an equal distance from each end, and of the greater depth, was found what appeared to be an arched doorway, about 3 feet wide, through the massive wall, and situate as if at the end of a passage of about double the width of the doorway, which was in the middle, the space being filled up with brick rubbish, and the returns-or side-walls of this passage seemed about 3 feet thick. At a distance of 30 feet of blank space, of gravel, southward, another portion of transverse wall of about 2 feet thick, was cut through; and at about the same distance farther southward still, another portion about 2 feet thick.

The northern portion of the wall, which, as I have before said, was only about 3 or 4 feet deep, appeared to terminate, with a transverse portion running westward, opposite to the door of the house named Linden Cottage; from whence there was a blank space of gravel for about 20 feet, when a quantity of brick rubbish was cut through; and whence the trench for the sewer is still proceeding. Not being (as you will doubtless have discovered), a craftsman in human habitations, nor provided with any other measuring apparatus than the pair of compasses common to all bipeds, my phraseology and quantities must be taken as only an approximation to what I have endeavoured to describe, and allowances made accordingly."

W. Y.

ROYAL INSTITUTE OF BRITISH ARCHITECTS.

The session 1855-6, will be opened on Monday, November 5th, at eight o'clock, and there will be meetings on the following Monday evenings:—

1855—November	... ...	19th
December	3rd ...	17th
1856—January	14th ...	28th
February	11th ...	25th
March	10th ...	31st
April	14th ...	28th
May	5th*...	19th
June	2nd ...	16th

* The annual general meeting of members *only*.

The profession, whether members of the Institute or not, may advance the general interest by contributing the result of their experiences, notes of their travels, or such suggestions as may occur to them.

THE BUILDERS' BENEVOLENT INSTITUTION.

Sir,—On Tuesday next, October 30, the anniversary festival of the Builders' Benevolent Institution, will be held at the London Tavern, and I do sincerely hope the meeting will be a profitable one for the interesting object in view. There are some persons who seem to have a dislike to a dinner on occasions of this sort, yet I cannot entertain the idea that the most fastidious will charge any of the directors, stewards, or any of the numerous assembly who may attend to take part in the business of that day, that they do so only for the sake of eating and drinking. No, indeed. I am quite sure the great object is to bring together as large a number as possible of generous, liberal-hearted Britons, for the purpose of mutual congratulation for the great good already done, and to encourage and stimulate each other to steady perseverance for the future, to aid and assist those of our fraternity who are aged, afflicted, unfortunate, and unable to help themselves.

Looking over the list of subscribers, I find a good many who have done well; but I do think there is only a very small part of our brethren engaged in all the various branches of the building trade who have seriously thought upon the matter. I would say to all, "Come, and give us a long pull, a strong pull, and a pull altogether."

I should likewise greatly rejoice to see the wealthy freeholders, merchants, and others, whose estates have been vastly enriched in ground-rents and other improvements by the persevering, industrious efforts of the builders. Pray, ladies and gentlemen, do come forward and give, by your liberal donations, a new impetus to the meeting. A thrill of gratitude and joy will be experienced by all, and not only so, but many widowed hearts will rejoice, and the blessings of many who are ready to perish will rest upon you.

Kingsland. Thomas Smith.

Notices of Books.

Reading Lessons. Advanced series, in Five Books. Edited by E. Hughes, Head Master of the Royal Naval Lower School, Greenwich Hospital. London: Longman and Co. 1855. Books I. and II.

Though forced to decline answering such inquiries, we are often asked as to a good series of "reading books" for juveniles not exactly children. Here is one of a new and sterling description. It is made up of brief essays, chapters, or articles on various subjects, written by authors well acquainted with the particular subjects on which they write,—as for instance, "On Beauty in Form and Nature," by Mr. Digby Wyatt; "On Colour in the Decorative Art," by Mr. Owen Jones; "On the various Forms of Poetry," and on other literary subjects, by Mr. G. L. Craik; "On Natural Philosophy," by Professor Tyndall; "On Chemistry," by Dr. Frankland; "On Language," by Mr. Latham; "On Food," by Dr. Lyon Playfair; "On the Life of James Watt," by Mr. Hugo Reid; and "On Physical Geography," and other subjects, by Mr. Hughes himself. The whole series is disposed on a distinct plan of development, comprising Philosophic Method, from "How to Observe," in the first book, to "Scientific Habits of Mind and Method," in the fifth; followed up by a section on scientific biography, beginning with the herdboy, Ferguson, the astronomic observer, and ending with Michelangelo and the ideal of art. Next follow in a like way, lectures on physical geography, geology, vegetable physiology, animal physiology and health, natural history and ethnology, political and domestic economy, chemistry, arts and manufactures, mechanics and mechanism, natural philosophy, astronomy and navigation, decorative and fine arts, and lastly literature. Thus each 3s. 6d. book contains a little on all these subjects, every subsequent book going a little more deeply or a little more in advance of its predecessor on all. The work is pretty fully illustrated with engravings, and each section or article has the name of its special author appended. There can be no question that these are the best "reading lessons" ever published, so far as regards suitability to the times in which we live; and many more than mere juveniles (nineteenth century enlightenment notwithstanding) will be likely to take "lessons" from them. The whole series is not yet issued.

Miscellanea.

A Statue of Wren near St. Paul's.—A correspondent "W." re-urges that, as there can now be little doubt of the vacant space near St. Paul's being left open, we should erect there a statue of Wren. "We can boast [he says] of statues in various parts of the metropolis,—some to great men, some to mere notabilities of a day, but not one have we of any of our great masters in art! Could we begin with a more fit subject than the '*conditor hujus urbis?*' Could any place be better adapted for a statue in his honour than one in close proximity with the greatest effort of his genius? Such of your readers as have been at Florence cannot but have been struck with the effect of the statue of Brunelleschi, on the Piazza del Duomo, the plan of his *opus magnum* on his knee, and comparing it, as it were, with the reality. Could we not do something in the same spirit? On the pedestal there might be bas-reliefs of remarkable incidents in Wren's life, and most especially would I suggest as one subject the old man's annual pilgrimage to the scene of his triumph."

Model Dwellings, Dudley.—We are informed that the architect has altered the system of smoke conduction laid down in the plan—carrying up *four* flues instead of *one* smoke tube—the action of which was not satisfactory.

Labourers' Cottages.—Sir Charles Anderson, in his paper on "Cottage Architecture," read at the recent meeting of the Lincoln Diocesan Architectural Society, said—"In these days the poor have been driven into the towns from the country, and much obloquy has been thrown on landowners as if they had been the sole cause of this. No doubt they shared in the blame; but many causes had been at work to bring about this evil: the former poor law—the natural tendency of men to shift the burden of supporting the indigent from themselves upon others. But there was one other cause—the cost of building cottages. This was the problem he wished to see solved—viz.: how a cottage having three good bedrooms, with suitable conveniences, could be built so as to be substantial, warm, convenient, not so unsightly as to destroy self-respect, and yet pay a fair interest on the money spent. Many proprietors had most laudibly spent their money in building cottages near their own residences, which were models of beauty and excellence. He named the villages of Belton, Blankney, and Hanton, as affording examples of this admirable munificence; but such models could not be followed in ordinary cases. We must have something less costly before we could expect proprietors to lay out their money. In different localities different materials would be found,—stone, brick, tile, slate, and the relative cost of each would make estimates differ, as well as the cost of labour. A simple mode of drainage, the quality of mortars, the pitch of roofs, the height of rooms, the situation of doorways—all these require careful consideration; and it would be one of the most beneficial tasks of the society to endeavour to obtain plans which had been tested, with vouchers for the cost of all the items, and the experience of the inmates as to their comfort, in order to arrive at what was wanted.

The Infirmary at Dundee.—A considerable disagreement has arisen between the building committee, the architects, and the builder. The architects have been superseded, and Mr. Peddie, of Edinburgh, called in to report. We have received some statements on the subject.

Architectural Society of Northampton.—This society held its annual meeting on Wednesday before last, Lord Alwyne Compton in the chair. The Rev. Thomas James read the report, and afterwards a paper on "Church Work for Ladies." Lord Overstone moved the adoption of the report, and the Rev. Sir G. S. Robinson, in seconding the motion, drew an amusing contrast between the present care for the decent service of the church, and the neglect which prevailed five and thirty years ago. He was afraid, he said, at that period to ascend his pulpit, lest it should give way with him, and, upon representing the case to the churchwarden, that functionary asked him, after due deliberation, and with the utmost gravity, whether he did not think an old pipe barrel, with a door cut in the middle, would make an excellent new pulpit. He mentioned, also, the case of a friend of his, who found, on going into the pulpit to preach, two mangold wurzel roots, with holes in them for the reception of the candles! The Rev. G. A. Poole read a paper on "Photography as applicable to Architecture," in the course of which he suggested the association of parties of photographers and sketchers, who should supply each others' defects, and be of mutual service in the way of architectural and archæological illustrations. The Rev. W. Law, of Marston Trussell, controverted the allegation that photography was incapable of representing aërial perspective, and exhibited some negatives in confirmation of his opinion. Various objects of antiquarian interest were exhibited at the meeting.

Project for Sewerage of Surrey Side of London.—A correspondent, "W. R." a practical engineer, sends us a sketch of a plan which he suggests for the conduction of the sewage of the south side from Barnes to Plumstead-marshes, whereby he designs to overcome the difficulties arising from the fact of so much of the ground on that side lying below the level of high tide in the river. He proposes what certainly at first sight does not much recommend itself to approval, namely, the formation of a cast-iron tube sewer, to be raised 24 feet above the surface, on iron columns, or brick piers, at its commencement, and gradually to fall throughout to the marshes, or below, if requisite. This tube is to be air and water tight, and lined with glazed pottery. It would be of oviform shape, made in segments, bolted and screwed together, and should be 4 feet 6 inches by 3 feet 6 inches at Barnes, and gradually widen to 10 feet 6 inches by 7 feet 6 inches at the marshes. The sewage would be pumped up by steam power into this tube at pumping-stations, from tanks; the first draining above Barnes, Richmond, Sheen, and Mortlake included, by means of brick sewers ending in the tank. Water might also, if necessary, be pumped up from the river to flush the tunnel, but our correspondent contemplates the transference of all that is left, after absorption, of the rain fall of the district through the tunnel sewer, and he gives estimates of quantities, from which he concludes that the drainage and sewage of twenty-four hours could thus be disposed of in ten hours. At Plumstead marshes he proposes to have four large receiving reservoirs, each capable of containing a whole day's sewage, which will here deposit its sediment, the fluid to be conveyed to the river through an open canal after being deodorized; the gas over the reservoirs also to be burnt, and the solid matter to be barged away coastwise. The whole line of tunnel is proposed to be made ornamental, and probably even to form part of a more general scheme for a railway and promenade, and a medium for gas, and water pipes, &c. The estimated cost of the sewer project is, 2,667,500*l*.

Surrey County Gaol, Horsemonger-lane.—Greater accommodation being desired here, the magistrates applied to Mr. Hill, the architect of the gaol at Wandsworth, to Messrs. Banks and Barry, and to Mr. Lapidge, the county surveyor, for plans and information upon the subject, and the first named gentleman sent in a report, in which he expressed an opinion that the gaol could never be altered in a satisfactory manner, and that the only plan was to pull it down and build a new prison. Messrs. Banks and Barry sent in plans for altering the present building in a manner that was satisfactory to the committee, at an expense of about 15,000*l*.; and Mr. Lapidge, the county surveyor, also sent in plans to carry out the proposed object, at a cost of 10,000*l*.; and the committee, in their report, recommended that the plan of this gentleman should be adopted and carried out. The matter has since been referred back to the committee, who are empowered to consider the whole subject, and report upon the advisability of altering the present building or to recommend the erection of a new prison.

The Cambridge Survey.—In the last number of the *Builder* (October 20), it is stated by a correspondent, that the new plan of Hereford, is "the only plan of a town for which an independent trigonometrical survey, computed from the meridian, has been made by any civil engineer." This statement is not correct. The Cambridge survey commenced in the early part of 1851, by Mr. William Radcliffe, in conjunction with whom I was subsequently engaged, was also "an independent trigonometrical survey," computed from the meridian of the Cambridge Observatory, the base line being measured on that portion of the Eastern Counties Railway, lying between the Cambridge Station and Newmarket road, and the proper correction applied for the difference of level. From the extremities of this line the position of a third station on the Castle-hill was determined, the three forming a well-conditioned triangle, from which other available and convenient points as church towers were observed as in the Hereford survey. The streets were all traversed and the stations plotted by computation.—Lewis Angell.

Chapel at Canonbury, Islington.—In consequence of the deficiency of church and chapel accommodation in this fast increasing neighbourhood, the committee of the London Congregational Chapel Building Society purchased an eligible plot of freehold land, at the corner of Alma-road, St. Paul's-road, Canonbury, for the erection of a chapel, and a few days ago the foundation stone was laid by Mr. Henry Spicer. The proceedings closed with the presentation of a bound copy of the Holy Scriptures, to each of the workmen, as also a gratuity in money. The chapel will be a very neat edifice, in the geometrical Gothic style, octagonal in form; length, 92 feet 6 inches; breadth, 66 feet; having a Gothic lantern turret, 110 feet high from the ground to top of vane. The roof is open timbered. There are minister's vestry, and deacons' vestry, lavatory, &c. entrance porches, staircases up to galleries, which will contain sittings for about 500 persons, and about 630 on the ground-floor. The communion-table is placed nearly in the centre of the building, in front of the pulpit. The chapel will be built of bricks, with white facings from Colchester. If the bricklayers go on as they have begun, it will be a good specimen of brickwork. Messrs. W. G. and E Habershon are the architects. Messrs. Rowland and Evans, of Coleman-street, Islington, the builders.

Cast-iron Fountain for South America.—The Coalbrookdale Company have executed a fountain and public light for the Chilian Government, to be placed in the City of Conception. A view is given in the *Illustrated News*. It consists of a Corinthian column, on which stands a figure of Ceres. The base, which is cruciform, has on each of its quadrangular projections the figure of a mermaid. The head and body lean inwards towards the pillar, the hands uplifting a large shell, through which the jets of water forming the fountain will rush. Immediately above, the column is surrounded by scroll-work projecting over the intervals between the mermaids, and terminating in winged snakes, which support the lamps. It weighs 14 tons 5 cwt, is 12 feet square at the base, and is 34 feet high to the top of the figure Ceres. It is a very incongruous affair. The Corinthian column and its capital would seem to be scarcely six diameters in height.

Liverpool Architectural Society.—On Wednesday evening in last week the usual fortnightly meeting of the above society was held in the Royal Institution. Mr. G. Kenneth read a paper on "Serpentine applied to Decorative Purposes," and said he thought it capable of being wrought into the most beautiful ornamental designs, capable of minute carving, and that it was superior to marble, as its chemical composition enabled it to resist the absorption of either grease or acids, whilst fire had but little effect upon it. Serpentine was not brought into use to any extent, although its existence has been known for many years, until 1848, when Prince Albert recognised its beauties, and suggested its employment for decorative purposes. Mr. George Mouier Williams afterwards read a paper "On the Use of Chemical Tests as applicable to Lime and other Matters connected with Building."

Railway Profits in America.—The Rutland and Burlington road, says the *Philadelphia Ledger*, shows net earnings for eight months and eleven days of 118,942 dollars. The Cleveland and Pittsburg road, for eight months, shows increase over corresponding time last year of 55,432 dollars. The earnings of the Black River and Utica Railroad for the month of August were 4011-84 dollars. The largest earnings of any previous month were 2 50S dollars, in July. The receipts of the Macon and Western road in August were 30,508 dollars, against 25,157 dollars, showing an increase of 5,251 dollars. The authenticated result of eight months' traffic this year on the Southern Michigan road, shows an increase of 286,181.

The Great Hotel du Louvre, at Paris.—At the recent meeting of the shareholders of the Société des Immeubles de la Rue de Rivoli, held at Paris, some details respecting this building, which promises to be one of the curiosities of Paris, were given. The building itself consists of one enormous house, the sides of which measure respectively 488, 458, 195, and 147 feet, the longest side facing the palace of the Louvre, and the longest end forming one side of the Place du Palais Royal. Round these two sides an arcade runs, with shops, in the style of the Palais Royal; the other two sides are also formed of shops, but without any arcade. Above the range of shops is an *entresol*, and above that the rooms belonging to the hotel, four stories high, and comprising 800 apartments. The principal court is entirely glazed over, and an external staircase admits the visitor to a vaulted gallery, from which doors lead to the various staircases, and also to the dining saloon. Both these apartments have the walls and ceilings decorated with wall paintings and gilding, in the style of the galleries at the Louvre. The building is entirely of stone, and has cost 294,000*l*.; the ground on which it is situated, 137,591; and the furnishing and capital for carrying it on are estimated at 80,000*l*.; forming a total of 511,591*l*.

The Iron Trade.—As was to be expected, the late attempt to force up prices beyond what the fair demand necessitated, has already damped and depressed even the previous demand, so that the Birmingham trade correspondent of the *Times* declares the trade to be "flat compared to what it was immediately preceding the late quarterly meetings." Indeed, it is rumoured that a fall of prices has been taking place instead of a rise, and many ironmasters already repudiate the quarterly decision, which is treated as if it were no decision at all, the actual majority, as it is urged, being the other way. Meantime the masters have been deliberately bringing themselves into a new mess in consequence of the attempt which failure induces them now to repudiate. The workmen in several of the most important establishments of the central iron district have given notice for an advance of wages, some of which notices have now expired. Simultaneously there is talk of a reduction of 10s. a ton on bars having actually taken place. The stock of pigs is becoming superabundant, and a fall of prices on these is also said to have occurred.

Surveyor: Cardiff Board of Health.—We learn from the *Silurian* that the appointment of surveyor to the Cardiff Board of Health has been conferred upon Mr. Thomas Wareing, at a salary of 250*l*. per annum. There were thirty-seven candidates. Mr. Wareing, before his appointment, was superintendent of the sewerage works now proceeding in Cardiff, according to the plans of Mr. Hawkshaw; and he will continue to hold this office, with an addition of 50*l*. to his salary as surveyor. The salary of the superintendent of sewerage works was 250*l*.

War Maps.—Mr. Wyld, the Queen's geographer, is usually ready to meet the public desire in regard to all places that become celebrated in the course of events, but he has almost anticipated the public curiosity by a map of the new point of interest in the war—Nicolaiev. It shows the keys of that naval building-port of Russia, Kinburn and Otchakoff, now in our hands. One result of the war will be, a knowledge of geography to thousands, some of whom will have to thank Mr. Wyld.

City of London and Counties Land Society.—In reply to the advertisement for an architect and surveyor to this society, twenty-eight applications were received: the gentleman selected is Mr. T. E. Knightley, of Cannon-street West.

Architectural Association.—At a meeting on the 19th instant, Mr. Rickman in the chair, a paper by Mr. Goodman, "On the Lights and Shadows of an Architect's Office," was read.

Church Stagnation in Camden-town.—In a populous and improving section of the northern limb, called Camden-town, a tasteful Gothic structure has stood for now two years; complete as to masonry, but vacant and windowless. There is the steeple with its vane, and the area railed round: it is to all appearance designed for a church, and as is usual in the suburbs, houses of some pretension to gentility encircle the building. But the works are suspended, and it stands like the house of the foolish builder, who counted not at first the cost. Seeing how many churches have been built within ten years throughout the kingdom, it is difficult to conceive wherefore in the heart of a wealthy neighbourhood a temple so well placed should be left open to the elements, some 10,000*l*. having been expended: possibly as many hundreds are required to complete. Suppose, Mr. Editor, we were to address the circumjacent residents, and put piety "*ad misericordiam?*" a voluntary subscription would soon supply the wherewithal to complete.

Ambulans.

The Improvement of our Towns.—It might be productive of much good if county societies were formed to improve the towns and the public institutions by erecting annually one useful institution by the united subscription of the residents and owners of property in each county, independently of all improvements that are being made by individuals or otherwise. Although this is comparatively a small country, and we have enjoyed centuries of civilization, some parts are almost in a primitive state, yet all are under the same Government, and expected to aid in supporting and maintaining the institutions of the country. The pressure of the population in the metropolis is excessive; several counties of larger extent than Middlesex having no towns with 10,000 inhabitants, and scarcely a public institution of any note or character. The united contribution required to erect one of such useful institutions as public libraries, museums, baths, &c. annually in such county would require but little self-denial in comparison with the advantages to be obtained, not only to the locality, but to the county.—A. B.

New Chapel at Walworth.—The foundation-stone of a new Primitive Methodist Chapel, was laid last week in Richmond-place, East-street, Walworth, by Mr. Apsley Pellatt, M.P. About 600*l*. or one-half the cost of the building, has been received. The chapel will be in the Italian style, faced with white perforated bricks, and constructed from a design furnished by Mr. T. Humphreys, of Camberwell, the builder. It will be 45 feet long, 34 broad, and about 32 feet high, with three galleries, and affording accommodation for 600 persons. There will be also two vestries in the rear, and beneath the building are extensive schools of same dimensions as the chapel.

Tyerman's Patent Bond for Building Purposes.—In the Hoop-iron Bond for building purposes, patented by Mr. Tyerman, of Weymouth-street, the iron, 2½ inches wide, is notched to a depth of about one-sixth of its width, at intervals of 12 inches, on alternate sides; that is to say, any notch on one side is opposite to a blank space on the other side. One side of each notched or severed part is bent out to an angle of 45 deg.; these bendings being in reverse directions as regards the two sides of the iron, thus forming reversed claws, which, when the metal is built into the brickwork, become imbedded in the structure, and so prevent all chance of the hoop-iron being drawn out. It is an evident improvement.

Lighting.—Mr. J. Longbottom, of Leeds, has recently patented a method of combining atmospheric air with hydro-carbons, for the purpose of producing light and heat. The invention consists in causing the air, passed in contact with pumice stone, or other porous substance, saturated with caustic potash, and then with similar substance, saturated with sulphuric acid, in order to free the air from water. The dry and pure air is then passed in contact with the hydro-carbon to be used. It is propelled through the process by bellows or blowing apparatus. The combined matters then pass into a gasometer. The air may be freed from carbonic acid in a similar way.

Kingsgate-street Chapel, Holborn.—The foundation-stone for rebuilding the Baptist Chapel in Kingsgate-street was laid on Wednesday last, by Sir S. M. Peto. The new building will seat from 800 to 1,000 persons, front and side galleries inclusive. The probable cost of the whole, with school-rooms, vestries, &c. will be about 3,000*l*. Mr. C. C. Searle is the architect, and Mr. S. S. Wilson, the builder.

Plymouth, America.—The corner stone of an immense granite monument, commemorative of the landing of the Pilgrims, is to be laid at Plymouth (U.S.) on the 1st of August, 1856. Thirteen years is the maximum allowed for its construction, and it is expected to be one of the most important monumental structures in the world. It is to be hoped due care will be taken to make the desire a reality.

Splendid Yankee Project for the Equalization of Summer and Winter.—I intend to lay down in every street, court, lane, place, and alley of Boston 10,000 miles of iron main, 4 feet diameter, with 12-inch service-pipes entering each house. So far so good. Then I shall commence at the top of the White Mountains to lay a pipe 10 feet in diameter into the ground 6 yards deep, from the said White Mountains to the main in Boston, which will have been constructed as before remarked: this done, I shall build a steam-engine, 718,000-horse power [this way, if you please, I'm afraid some one hears me] I shall force the freezing atmosphere from the mountains into every house in B. There's no mistake about this—it's bound to go; and when it's finished, I mean to go in, that's flat-footed, for a line of pipes to the tropics to pump hot air into the houses in winter. These little jobs completed, and we will have our cool weather in July, and in January it shall be warm and comfortable, as it ought always to have been. I guess Nature's jig is about up, ain't it?—*The Toronto Globe.*

"Books and Addresses."—We are forced to decline pointing out books or finding addresses.

ADVERTISEMENTS.

AGENTS WANTED, for the SALE of BATH, PORTLAND, and ROMAN CEMENTS, for the Export Trade, and for any of the Home Towns of the United Kingdom. The highest references will be given and required.—Address to A. B. C. care of Mr. W. H. Hayden, 17, Warwick-square, Paternoster-row, London.

TO BUILDERS, FOUNDERS, AND OTHERS.

AGENTS are wanted by the undersigned, to introduce DUPRE'S PATENT HYDROMETIC and ECONOMIC OVEN, for all towns, and the whole of England, Ireland, Scotland, and the Channel Islands. This Bread Baking Oven, which has been recently patented, is an invention of great importance to the trade, as well as to the country at large, inasmuch as it possesses vast advantages over the present system, there being not only 50 per cent. saving in the consumption of fuel, but it is much more expeditious From its construction, all sulphuric air is withdrawn, and consequently the bread is much purer. The cost of building is not much above that of the present. The model may be seen in the Inventors' Court of the Crystal Palace, Sydenham; and the first and only oven built from which the experiments have been made at Mr MATHEWS'S, Baker, Guildhall house, Plymouth.—Apply to JOHN DUPRE, Gibbons-street, Plymouth.

A VACANCY will shortly offer in the country, to a respectable person, as BUILDER'S ASSISTANT. Qualifications required:—To be of steady, honest, industrious habits, a good writer, capable of preparing finished in tint style and working drawings, make specifications, set out quantities, &c. accurately, when not engaged superintending workmen: good ideas about alterations, repairs, &c.; fond of early rising: age about 30. Salary will be 26s. per week.—Apply (post-paid) to A. M. 8 Newgate-street, London. None need apply unless they have a desire to remain in the situation, and would be anxious to promote the employer's interest; also their references and testimonials must be in every way satisfactory.

BRADFORD CEMETERY, Yorkshire.—WANTED IMMEDIATELY, a PERSON qualified to fill the office of ASSISTANT REGISTRAR at the above cemetery. He must write a good hand, understand accounts, and be a good draughtsman and colourist.—Apply (post paid), stating age, salary, and references, to Mr WILLIAM GAY, as above.
Bradford, 24th October, 1855.

GREAT NORTHERN LONDON CEMETERY.—WANTED, immediately, an efficient CLERK of WORKS, accustomed to ecclesiastical works and stone masonry, to superintend the works connected with the above Cemetery, at Colney-hatch.—Apply to Mr. E. A. PUGIN, Architect, at the Offices of the Great Northern London Cemetery Company, 128, High Holborn. Letters, containing a reference to recent employe s, will alone be attended to.

TO SURVEYORS AND DRAUGHTSMEN.

WANTED, an expeditious, first-class, DRAUGHTSMAN, fully capable of getting up finished plans of towns, to scale and correct on the ground the plans drawn in the office None but thoroughly-experienced draughtsmen, with good testimonials, need apply.—Address, post-paid, stating salary, to E. W. S. Post-office, Nottingham.

WANTED, 200 MEN to excavate soft clay in the Hob Hole Drain, near Boston, Lincolnshire.—Inquire on the Works.
N.B.—The hard excavations are done.

TO CARVERS AND WOOD-PATTERNMAKERS.

WANTED, a Man accustomed to prepare PATTERNS for IRON and BRASS CASTINGS.—Apply to Messrs. HART and SON, Wych-street, Strand.

WANTED, in a Surveyor's Office, a short distance in the country, a Young Man of respectable connections as CLERK; he must possess good practical and general abilities, be a neat and correct draughtsman, good and ornamental writer; he must also be of known steady and business habits. A remunerative salary will be given; and should he prove in every way satisfactory to his employer, in all probability, after a certain period, he will have the opportunity of making arrangements whereby he could become possessed of a share in a well-established and good practice.—Address, post-paid, A. B. with specimen of drawing and writing, with necessary testimonials, 1, Falcon-square, near the new Post-office.
N.B. A young man who has served his articles of clerkship to an architect and surveyor in London, or some good provincial town, wishing to make his way by good abilities and persevering habits, to join a person who has a good practice, would be preferred.

WANTED, an ENGINEER, regularly apprenticed to the trade, to keep in repair the crane and other engines, stoke and entirely manage the boilers and machinery in a wholesale warehouse in the city. It will be useless that any but men with the highest testimonials and engineers by trade should apply. There will not be any night-work, but the person engaged will be required to devote the whole of his time and attention to the situation Wages, Two Guineas per week.—Apply to Mr. JEBB, 19, St. Swithin's-lane, City.

WANTED, in a Builder's Office, a steady and experienced CLERK, competent to undertake measurements, estimating, and making up accounts.—Apply, by letter, stating terms and references, to J. W. care of Mr. Maddick, 37, Holywell-street, Westminster.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GROSS'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

This Paint possesses in an eminent degree the following advantages over all other known Pigments:—
INDESTRUCTIBILITY BY HEAT—PRESERVATION OF IRON FROM OXIDATION WOOD FROM DECAY, AND MASONRY AND BRICKWORK FROM DAMPNESS—PERMANENCE OF COLOUR AND FREEDOM FROM DELETERIOUS PROPERTIES—SUPERIORITY OF BODY.

The Protoxide Paint, as at present produced, is of one shade of colour, v.z.:—a pale drab, but it may be tinted with any other colour to suit the taste and purpose for which it may be required. It is not affected by sulphuretted or carburetted hydrogen gas, bilge water, or indeed foul air of any kind, and is therefore well adapted for the interior of Ships, Warehouses, Offices, Stabling, &c.; and from its total freedom from deleterious properties, it will be found of great value for painting the interior of Hospitals, Asylums, Unions, Gaols, and other Buildings which may require to be painted during occupation.—Sole authorized Agents for England

MESSRS. C. GRABHAM AND CO. 4, BARGE-YARD, BUCKLERSBURY, LONDON.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be entirely avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and white it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped HUBBUCK LONDON PATENT And if not so marked the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works or St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND and ROMAN CEMENT; TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has cut rely CLOSED his Establishment on the Surrey side of the Thames, and that Articles of his manufacture can only be obtained lat his Works, Mill-wall, Poplar, or at his Warehouse, Praed-street, Paddington.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which, the eminent hydraulic properties stamp it at once as the first Cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The quality is constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London. March 20, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or along-side rivers, canals, or railway stations, should be given a few days before required.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour, resembling Bath stone.—CHARLES RICHARDSON, 6 South Wharf, Paddington.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool

NOTICE.—BLUE LIAS LIME.—L. B. PEARSE and CO. beg to inform Architects, Engineers, Builders, and Contractors generally that they have now received the AGENCY for the above valuable HYDRAULIC LIME, from the general quarries, Stockton, Warwickshire, and are now supplying direct from the works in their own boats, at a reduced rate.

L. B. PEARSE and CO. beg further to give notice to consumers, that they have erected, at a considerable expense, large buildings and machinery for grinding lime and cement, so as to ensure genuine quality and large supply, at their extensive premises, situate on the Great Northern Railway, York-road, King's-cross.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), NORTH WHARF ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 9d. per ton.

Small ditto ditto, 4d. per ton.

Barges loaded in a few minutes.

Wouldham hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

TATHAM & CO.—No. 14, SOUTH WHARF, PADDINGTON, BRICK, LIME and CEMENT MERCHANTS, SOUTHAM BLUE LIAS LIME DEPOT.

Bath, Portland, Lias, and Roman Cements; Parian and Keene's Cements, Plaster of Paris, Glazed Stoneware Sewage Pipes, Fire Goods, Vitrified Blue Bricks, White Building Bricks, White Enamelled Bricks and Traps, and every description of Building Material.

N.B. Lump and Ground BLUE LIAS LIME delivered in boats, lords direct from the Works in Warwickshire, to any part of the river or canal

SOUTHAM BLUE LIAS LIME DEPOT, No. 14 SOUTH WHARF PADDINGTON

TATHAM & CO. have arranged for a constant supply of the above very superior BLUE LIAS LIME, which for the last two years has been extensively used at most of the large works constructed during that period or now in hand, and any orders they are favoured with will command their best attention

Bath, Portland, Roman, and Keene's Cement can be delivered direct from the Works in WARWICKSHIRE to any part of the Rivers Thames or Lee, alongside any wharf on canal, or by boat or rail to any part of the kingdom

PORTLAND CEMENT.—TATHAM & CO. are enabled to offer a very superior quality of this valuable Cement at a moderate price, and all orders add ressed to No. 14, SOUTH WHARF, PADDINGTON, will receive the best and most prompt attention.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland cement is manufactured at these works with especial reference to its destination, whether for sinecoure, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters

Dated St. Mary-street, Bridgewater, July 26th, 1854.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes. Nine Elms, London

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—light and dark, equal to any made Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

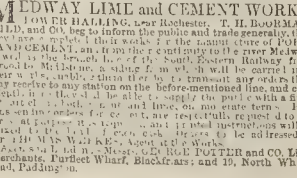
CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied or shipment, on advantageous terms.

NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishment, &c.—will not heat, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7	0	0
Fine	6	0	0
Course	2	10	0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis.

H. George-yard, Lombard-street, City.



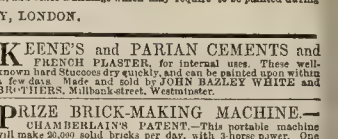
ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

TO BUILDERS, CONTRACTORS, SHIPPERS, and Others.

G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland-yard, Westminster.

DAVIES and NORMAN, Agents

Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c of superior quality, and at reasonable prices.



GLAZED STONEWARE DRAIN-PIPES, CLOSET PANS, &c. IN EVERY VARIETY

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester. T. H. BOORMAN, WILD, and CO. beg to inform the public and trade generally, that they have completed their extensive and celebrated manufacture of PORTLAND CEMENT, and from the continuity to the river Medway, as well as the branch line of the South Eastern Railway from Strood to Maidstone, a supply of such will be carried into town by rail, enabling them thereby to transmit any orders they may receive to any station on the before-mentioned line, and confident that they shall be able to supply the public with a first-rate article of such kind and line, on moderate terms. Persons sending orders for cement are respectfully requested to say by what railway it is to be sent, and the nearest station will be attended to. Price list forwarded on application to Mr. HENRY WARREN, Agent at the Works.

Also, Stock and Kiln-burnt Red POTTER and CO. Lime Merchants, Purfleet Wharf, Blackfriars; and 19, North Wharf-road, Paddington.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PRIZE BRICK-MAKING MACHINE.—CHAMBERLAIN'S PATENT.—This portable machine will make 30,000 solid bricks per day, with 3 horse power. One man to feed the machine with clay, and boys to remove the bricks. Was awarded a silver medal by the Liverpool and Manchester Agricultural Society, at St. Helen's, September 6th; a silver medal by the Staffordshire Society at Leek, September 27th; and a prize at Worcester, October 26th, 1853.—Apply for particulars to Mr. HUMPHREY CHAMBERLAIN, Kempsey, Worcester.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new, whether of thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 69, King William-street, City, London. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landowner, the builder, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvetoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

THE KINSON CLAY-WORKS, POTTERIES, and FIRE-BRICK ESTABLISHMENT, near Poole, Dorset, Manufacturers of every description of Sanitary Glazed Sewage pipes, Closet pans, Furnace-blocks, Fire-bricks, Gas-retorts, Crucibles, &c. &c.—The completion of the Kinson Pottery places the Proprietors in a position to supply Builders and the Trade generally with any quantities of the above description of Articles at moderate prices. The pottery is situate about a mile and a half from the town and port of Poole. It is worked by steam-power, and the pipes are made by the most approved patent machinery, and will bear favourable comparison with any manufactured in the kingdom. The fire-bricks have been tested, and are found fully equal in all respects to those manufactured at Stourbridge and Newcastle. All articles are made from the clays and materials found on the estate. There is an inexhaustible quantity all of Dorsetshire Clay, used for pottery purposes, which can be supplied to the Staffordshire, North Country, and London markets, upon favourable terms.

Lists of prices and other information will be furnished, upon application to Mr. T. W. GREEN, at the Works.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH perfectly NON-ABSORBENT (no quantity of rain having any effect upon it), and will not VEGETATE or RUB OFF. Stucco Cement and Stucco Paint. CLARK and BENGOUGH, Manufacturers Office, 4, George-yard, Lombard-street Works, Grand Surrey Canal Bridge, Old Kent-road.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants, Builders, contractors, and others supplied with every description of building material at the lowest market prices.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.:—Grey Stocks, 25s. per thousand; Grizzles, 20s. per thousand; Rough Stocks, 20s.; Place, 18s.—Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour Him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

Agent — Mr. J. UNWIN, Private Residence, 58, Nelson-square, Blackfriars-road.

TO BRICKMAKERS.
CLAY GROUND and STOCK BRICKS made at one and the same time, with ease, by one horse, at the rate of from eight to ten bricks the minute. Price of machine at Hull 25l. Reference given and part culars forwarded.—Apply to W. HODSON, Patentee, Kingston-square, Assembly Rooms, Hull. Agents wanted for the several counties in England. A liberal per-centage allowed. Reference given and expected as to respectability.

TO ARCHITECTS AND BUILDERS.

PAVING TILES, White, Red, and Blue, of different sizes and patterns, ornamental ridge tiles, coloured plain and brown, and a large assortment of white fancing bricks and landing pipes, convenient for water carriage FOR SALE also a good horse-power BONE-MILL.—Apply to E. HOOPER, Portland-street, Southampton.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 30s. per 1,000; floor bricks and 6-inch pavings, at 27s. 6d. per 1,000; 8-inch pavings, at 27s. 6d. per 1,000; 9-inch pavings, at 35s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

BEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for the WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 561, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

TO CAPITALISTS, POTTERS, CHINA, BRICK, AND TILE MAKERS, AND LANDOWNERS NEAR RAILWAY STATIONS

HANDS'S great economising PATENT KILN.—Capitalists, and persons engaged in the above works, owners of land near railway stations, containing any description of pottery clays, brick, or other valuable earth, are particularly invited to look at HANDS'S great economising PATENT KILN; from its construction it enables persons to build one on any suitable spot where they may please, so to economise the heat, that all that great waste and extra expense looked for as a matter of course in the old system, is completely avoided, by causing the heat to dry sand, and every description of strong moulded clays. AT ANY SEASON, in time of burning and cooling the kiln, with perfect soundness. No cost required to keep up the works all the year round, beyond the consumption of about 20 or seven tons of coal, to burn off 20,000 goods in each kiln. Any person desirous of availing himself of this opportunity for a district, license or otherwise, may apply if by letter, pre paid, to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom, Surrey, where the kiln is to be seen, by appointment only.

TO FARMERS, BRICKMAKERS, and OTHERS.—TO BE SOLD, 20,000 CHALDRONS of ASHES and BRESSE; also, a quantity of good Manure and Horse-dung, close adjoining the Regent's Canal and Great Northern Railway; can be taken away by boats and barges, or delivered in carts.—For further particulars, inquire of Mr. GEORGE TILLEY, Saint George's-wharf, Cambridge-street, Regent-town.

DUTCH CLINKERS, 32s. per thousand, by the best Makers.

WELSH, STOURBRIDGE, AND NEWCASTLE FIRE-BRICKS, LUMPS, AND TILES, at much less than cost prices. The BUSINESS to be DISPOSED OF, with the valuable connection, and a portion of the PREMISES to carry on the same, TO BE LET, at almost a nominal rent.—For particulars inquire on the premises, Honduras Wharf, Bankside, Southwark, London.

BALLAST for SALE, cheap, situated in the New North-road, Hoxton; also, a PIECE of LAND TO BE LET, on a Building Lease for eighty years, for two third-rate houses and shops, in the main road, omnibuses passing every few minutes. The reason for parting with the ground is ill health. This is a valuable piece of land; the houses will let on lease at 35l. and 36l.; there are first-rate tenants waiting for them.—Apply to Mr. CASS, 23, Mintern-street, New North-road, Hoxton.

BRICKS, LIME, WHITING, TILES, FLINTS, GRAVEL, &c.—Messrs. MEESON and CO. supply stocks, pickings, rough stocks, place, red kiln bricks, arches, &c. &c. on low terms, to any part of the Thames, the various canals, the River Lea, &c. or by rail to any station on the Eastern Counties line, or any railway connected with it; also, flints for building boundary walls, stables, cottages, &c. by using which one-third of the expense may be saved. Also, lime, chalk, chalk rubbish, gravel, loam for foundries, &c. &c. Whiting of the best quality, lime, both white and flare, bricks fire-goods, &c. can be obtained at Messrs. MEESON'S Wharf Kilns at Bow-bridge, Stratford, Essex; or from the Works at Gray's, Essex.—Orders by letter, to Messrs. MEESON and CO. Gray's, Essex, executed with despatch.

GROUND FLINT AND CORNISH STONE, UNADULTERATED, Manufactured by MACHINERY, which produces the greatest degree of fineness. WILCOX & CO. Flint Mills, Millwall, near Scott Russell's. CARRIAGE FREE.

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames-bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer his agent.

Mr. B. Fabbricotti hopes the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

THE LIZARD SERPENTINE COMPANY manufacture and sell in block and slab, the beautiful Stone now raised from the lower beds of their Quarries. Chimney-pieces, Columns, Fonts, and ornamental works on view, at 30, Surrey-street, Strand.

HENRY COX, Manager at the Lizard.
F. W. RUFFLE, Agent in London.

THE LONDON and PENZANCE SERPENTINE COMPANY having just opened an extensive SHOWROOM, at No. 18 Wharf, Macclesfield-street North, City-road, for the sale of CHIMNEY-PIECES, and other articles, useful, architectural, and ornamental, invite Architects, Builders, and the trade generally, to inspect the same. A large assortment of fancy articles are also always on sale at the Company's Stall in the Mineral Manufactures Court, in the Crystal Palace, Sydenham. Estimates given, and orders promptly executed.

July 25, 1855. C. ADENEY, Secretary.

MARBLE and STONE CHIMNEY-PIECES.—WM. HUSTLER, Marble and Stone Sawing Mills, Cambridge-heath, Hackney, begs to call the attention of the Trade to his STOCK of CHIMNEY PIECES, suited to all classes. W. H. has enlarged his workshops and improved his machinery, so as not only to compete, but is able to sell lower than any other house in the trade.

N.B.—Good marble masons and polishers wanted.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, verd antique, &c. Portland, Harelhill, Park Spring, and other stone, in blocks, slabs, landings, and headstones. Yorkshire paving, granite curb, &c. All goods carefully packed and forwarded to any part of England.—THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

MARBLE.—The Italian Marble Company, Importers of the produce of their many quarries in the province of Massa Carrara, Italy, beg to inform the general marble trade in the United Kingdom that they are prepared to undertake Contracts for any quantity of Statuary, Veined, Sienna, Bardilla, Dove, and other Marbles, in blocks of all dimensions, delivered on shipboard at Leghorn, or in dock, London. A constant stock is always kept at the London Depôt. Orders for Paving Slabs, Garden and Hall Statues, Vases, Tops, Consoles, &c., executed and delivered at reasonable rates.—For further particulars apply at the Offices of the Company, 18, Cannon-street, City.

WILLIAM W. BONNIN, London Secretary.

THOMAS TILNEY, YORKSHIRE STONE MERCHANT, Tanfield-place, Leeds.—To Builders and Buyers of the Best Quality—direct from the Quarries in truck loads of five tons. Paving, Landings cut out to sizes, Steps, Copings, &c. &c. supplied on most advantageous terms by railway, and with despatch. Prices sent on application.

BATH STONE DEPOT, BOX STATION. ROBERT STRONG, STONE MERCHANT, Box, Wilts.—Box Ground Stone, Scalelt Block, Ashlar, Rough-work &c. &c. supplied direct from the Quarries: also every description of Stone-work for Building purposes, both plain and ornamental, prepared ready for fixing, and forwarded to any part of the kingdom. Vases in elegant variety always on view; URNS, Fountains, Chimney pieces, Tombs, &c. &c.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for carriage paths, ballast, sand, &c. Materials lauded, wharfed, and carted.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 246, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beehen, and Co.), Caen wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to supply from their Wharf, as above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE.

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal-road, King's-cross, London, continue to supply the trade with all descriptions of Marble, in Block and Slab, at the lowest prices.—N.B. A good stock of Statuary Slab on hand, suitable for shelves.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace.—Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank row, Westminster.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall. London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TAATHAM, Liskeard. This Granite is selected for the New Westminster-bridge.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

PIMLICO MARBLE WORKS, BELGRAVE-WHARF, LOWER BELGRAVE-PLACE.

SAMUEL CUNDY,

THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL.

PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

YORKSHIRE STONE.

GEO. VINT and BROTHERS beg respectfully to inform Architects, Surveyors, Contractors, Builders, and Masons, that they can supply to any extent all kinds of YORK STONE, including Paving, Bramley Fall, Park Spring, &c. of the very best quality, direct from their Quarries, to all Railway Stations and Ports in the Kingdom, at the most reasonable terms.

GEO. VINT and BROTHERS will gladly forward prices by post on application.—Address, Idle, near Leeds.

MARKET-WHARF, REGENT'S-PARK-BASIN WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. MOULES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Lettering, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS, MILLBANK-STREET, WESTMINSTER. Marble of all kinds and of best quality, in block and slab, Marble mortars, &c.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Government Buildings, also for Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street, also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

LLANGOLLEN FLAG and SLATE COMPANY.—The present proprietors of the Quarries, formerly worked separately by the Llangollen Flag-Stone Company and the Llangollin Slate Company, are now prepared to supply architects, contractors, slate merchants, builders, and others with FLAGS, SLATES, and SLABS of every description; Cisterns, Chimney-pieces, Baths, Filters, Larders, Mangers, Ridging, and every other article made of this beautiful material, all of superior quality. The Llangollen Slabs, from their great durability, and the extraordinary size in which they can be obtained, are particularly adapted for the paving of railway stations, malthouses, breweries, conservatories, warehouses, &c. A cheap variety of self-faced flags for street paving, &c. can be supplied at very moderate prices.—Prices and further particulars can be had upon application to Messrs. JOHN TAYLOR and SONS, 6, Queen-street-place, Upper Thames-street; Mr. S. VENABLES, at the Company's Premises, 4 Wharf, South Wharf-road, Paddington; or to Mr. GEORGE P. DYKE, at the Works of the Company, Pentrefelin Wharf, Llangollen.

TO BUILDERS and Others in Town or Country.—For PRICES of BANGOR SLATES, apply to SCOLES and WOOD, Market Wharf, Regent's-park.

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c.

ENAMELLED SLATE CHIMNEY-PIECES, of elegant designs and superior workmanship, in great variety, at prices from 21s. to 10 guineas. Slate fenders made to any size. J. HOWELL, Manufacturer, 5, Cook's-grounds, King's-road, Chelsea, Middlesex.

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 39 and 40, Upper Belgrave place, Pimlico.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.

Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN, PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.

N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

SCAGLIOLA done on an IMPROVED PRINCIPLE.—I refer to the Gothic Arch by D Delon in the Great Exhibition of 1851, which gained the only Prize Medal awarded for the manufacture of the above work.—Specimens to be seen at 153, Drury lane, two doors from Holborn, superior to any yet offered to the public, with a choice Collection of Ornaments for building purposes, Trusses for Shop-fronts, &c. &c.

Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP, which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous marriage and expensive slides and guides are unnecessary, rendering the price considerably less than Pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 25 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS, 8, Cresent, Jewin-street, London, Manufacturers and Patentees.

TO WATER AND DOCK COMPANIES, CONTRACTORS, &c.

PARSEY'S PATENT REVOLVING PUMP will throw as much water with one-third the labour as any other pump. One of these pumps at work at No. 79, Strand.

TO LOCAL BOARDS of HEALTH and GAS and WATER COMPANIES.—FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.

W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

VAST IMPROVEMENT in PUMPS.—PARSEY'S REVOLVING PUMPS, all metal, without valves, leather, or packing to choke or get out of order, and equally superior for hot or cold liquors. Contractors, brewers, distillers, shipowners, water companies, agriculturists, &c. are solicited to see them in action at Mr. PARSEY'S, Engineer and Patentee, Great Scotland-yard, where orders are received and executed. Hand Pumps to throw 350, 600, 1,800, and 2,700 gallons per hour. Pumps for engine power to any quantity.

FOWLER'S
IMPROVED FARM AND COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, at 15s.

The usual allowance to the trade.

PUMPS of SUPERIOR CONSTRUCTION, in various plain and ornamental patterns, for squares and market-places, roads, conservatories, liquid manure, ship, barge, brickmakers, contractors, gold diggers, brewers, chemical works, and in wrought and cast-iron, copper and brass, for hot or cold liquors, &c. &c. Long barrel and hydraulic lift-pumps, with handles on planks; and engines of various powers, for wells of any depth.

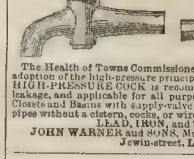
Also, a Circular-Saw Bench.—State particulars, and price of each at cle separate, full, and maker's name Address, A. J. R. care of Mr. Ferris, 193, Temple-street, Bristol.

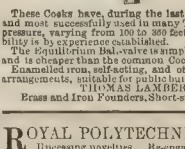
TO WATER COMPANIES AND PLUMBERS.



BURDEN'S PATENT HIGH-PRESSURE COCKS.—These cocks are remarkably simple in their construction, very durable, cheap, not liable to get out of order, and have been most successfully used for a period of three years, under continuous head pressure, varying from 200 to 450 feet. The following is one of the latest testimonials received:—"Stirling, 4th September, 1855. At a meeting of the Water Commissioners held that it was unanimously resolved to recommend Burden's Water Cock for general use. It has been on trial here for nearly three years. During that period it has successfully resisted the high pressure of water in Stirling, amounting to from 200 to 450 feet, about the highest pressure in the kingdom The Commissioners confidently recommend to the public generally the above cocks, as the very best for high-pressure purposes, from the simplicity of their construction, cheapness, and durability owing to the entire absence of leakage, they will effect a saving of from 10 to 20 per cent. of water over the cocks that have been hitherto in use—By order of the Commissioners, JOHN SAWERS, Provost, Chairman."

SAMUEL SHEPPARD, Sole Manufacturer,
JAMES STREET, SAINT PAUL'S, BIRMINGHAM.

TO WATER COMPANIES AND PLUMBERS.



HIGH-PRESSURE COCKS & CLOSET

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and readyto use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

SCOTTISH EQUITABLE (MUTUAL) LIFE ASSURANCE SOCIETY.
Established 1831.

At 1st March, 1855, the amount of the accumulated Capital exceeded £910,000
And the Annual Revenue exceeded 163,000
The number of Members was upwards of 600
This affords the strongest evidence of the continued prosperity of this institution, and of the immense benefit to the families of deceased members.—For prospectuses and all information, apply to WILLIAM COOK, Agent.
126, Bishopsgate-street, London.

THE ASYLUM LIFE ASSURANCE OFFICE, 73, CORNHILL, LONDON.
Established 1824.

Policies on healthy and diseased lives, at home and abroad, for civil, military, and naval employments.
The office being on purely proprietary principles, no participation among policy holders is involved.
For prospectuses, proposal papers, &c. apply to MANLEY HOPKINS, Resident Director.

CRYSTAL PALACE.—The ARUNDEL SOCIETY.—On SATURDAY, the 3rd of NOVEMBER, in EXHIBITION of WORKS of ART, the property of the Arundel Society, will be opened to the public in the Industrial Court, adjoining the Music Court. The objects exhibited will consist of—A complete Series of Tracings in Outline, from the celebrated Frescoes by Giotto, in the Chapel of the Arena at Padua; a Set of Drawings from the Chapel of Nicholas V. in the Vatican; a Chronological Series of Specimens of the Art of Ivory Carving in the Early and Middle Ages; and other Illustrations of Art-History.

AT THREE o'clock on the above-mentioned day Mr. DIGBY WYATT will offer a few Observations on the Collection, in the Court in which it will be exhibited.

GEORGE GROVE, Secretary.

BOARD of TRADE DEPARTMENT of SCIENCE and ART.—INSTRUCTION in ART.—TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL-MALL, LONDON.

Art-superintendent—RICHARD REDGRAVE, Esq R.A.

Head-Master—R. BURCHETT, Esq.

The Courses of Instruction pursued in the School have for their object the systematic training of teachers, male and female, in the practice of art and in the knowledge of its scientific principles, with the view of qualifying them to impart to others a careful Art-education, to develope its relation to the requirements of trade and manufacture, and its application to the common uses of life. Special courses are arranged in order to qualify School-masters of Parochial and other Schools to teach Elementary Drawing as a part of General Education concurrently with Writing.

The instruction comprehends the following subjects :—Freehand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera and Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, objects of Still life, &c., the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art. Also, Classes for instruction in the technical processes of Chiaro and Enamel Painting, Drawing and Engraving on Wood, and Lithography in Chalk and Colour. The two last classes for female students only.

Hours of Study—Morning, TEN to THREE ; Evening, SEVEN to NINE, daily, except Saturdays. Fees 4l. per session, or part of the session. For Evening Classes only, 2l. per session.

The Class for Practical Geometry and Perspective, or that for Modelling and Casting, may be attended separately on payment of a fee of 1l. per session.

Students have full access to the valuable collections of the museum and library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students not in training, is at 37, Gower-street, Bedford-square. Superintendent, Mrs. M'Ian. Fees per session,—Advanced Class, 2l. and 4l. ; Elementary Class, 1l. ; Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall-mall, London.

THE ARCHITECTURAL MUSEUM, Cannon-row, Westminster.—Autumn Session, 1855.

On Monday, November 19th, a LECTURE will be delivered at the Museum, "On Form, Light, and Shade in Architectural Foliage," by J. K. COLLING, Esq. Hour of admission, Seven o'clock. The chair to be taken at Eight o'clock. Cards of admission may be had at the Museum, and at the Office of "The Builder."

The Museum is now open Monday and Wednesday Evenings, from seven till Nine o'clock.

The Annual subscription for Art workmen is 5s. due on the 1st of January in each year.

HENRY CLUTTON, Hon. Sec.

November 3, 1855.

COMPETITIONS.

TO ARCHITECTS, &c.

WANTED, by the West Hartlepool Improvement Commissioners, DESIGNS for a PUBLIC MARKET. A PREMIUM of 20l. will be given for the most approved design. Further particulars will be furnished on application to me, to whom all plans must be sent on or before the 19th inst.

WM. W. BRUNTON, Clerk to the Commissioners.

November 1, 1855.

CONTRACTS.

ORDNANCE CONTRACT.—To BUILDERS.—Notice is hereby given, that Tenders will be received at the War Department, Pall-mall, London, on or before WEDNESDAY, the 21st of NOVEMBER, 1855 from such persons as may be willing to enter into a CONTRACT with the War Department for BUILDING ADDITIONS to HILSEA BARRACKS, near Portsmouth, County of Hants. The plans, specifications, and conditions of contract may be seen, and every information obtained, on application to Mr. HAWKEN, Clerk of Works, at this office, any day (Sundays excepted) on and after the 7th to the 20th NOVEMBER, 1855, and where forms of Tender may be obtained.

N.B. The War Department reserve to themselves the right of rejecting all or any of the Tenders.

Royal Engineer Office, Portsmouth, October 24, 1855.

NOTICE to CONTRACTORS and BUILDERS.—ORDNANCE CONTRACT.—Sealed TENDERS, addressed to the Director-General of Contracts Ordnance Office, Pall-mall, London, will be received until TEN o'clock a.m. of FRIDAY, the 9th NOVEMBER, 1855 from parties willing to CONTRACT for the CONSTRUCTION and ERECTION of SIXTEN WOODEN BUILDINGS, for officers' quarters, mess establishments, and tailors' and shoemakers' shops, at Aldershot, in the county of Hants. Plans, estimate, and specifications and forms of Tender obtained, on application at the Royal Engineer Office, Aldershot, on and after MONDAY, the 5th NOVEMBER, 1855 Tenders to be marked on the envelope, "Barracks," and endorsed "Tender for Wooden Buildings at Aldershot." The Ordnance reserve the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Aldershot, Oct. 31, 1855.

NOTICE to BUILDERS.—ORDNANCE WORKS.—The Commanding Royal Engineer of the Dover District hereby gives notice, that sealed TENDERS will be received at the Office of the Director-General of Contracts, Pall Mall, London, on or before THURSDAY, the 13th day of NOVEMBER, 1855, from persons desirous of CONTRACTING for the following WORKS at Sandown Castle, near Deal, viz. :

1st CONTRACT.—For REBUILDING a portion of the MASONRY WALL on the sea face of Sandown Castle.

2nd CONTRACT.—ERECTING THREE GROYNES on the beach in front of Sandown Castle.

Plans and specifications of the works to be executed, may be seen by competent persons, none others need apply, and forms of Tender obtained at the Royal Engineer Office, Walmer, between the hours of TEN and FOUR o'clock, from the 7th of NOVEMBER, to the 14th of NOVEMBER, 1855 (Sunday excepted).

The parties whose Tenders may be accepted for the works will be required to enter into a bond, with two sufficient sureties, jointly and separately, to be bound under a penalty of 200l. for the due performance of such of the Contracts.

Separate Tenders for the above works to be addressed to the Director-General of Contracts, Pall-Mall, London, and endorsed "Tender for Ordnance Works at Sandown Castle."

N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders

Royal Engineer Office Dover November 1, 1855.

EASTERN COUNTIES RAILWAY COMPANY.—The Directors are prepared to receive TENDERS for the SALE of a quantity of OLD STORES, consisting of brass and iron tubes, metal borings, iron and steel scrap, waste paper, &c. The stores may be seen, and forms of Tender obtained, on application to the Storekeeper, at Stratford Works, from the 1st to the 8th NOVEMBER inclusive, and not later—by order.

J. B OWEN, Secretary.

October 29, 1855

CONTRACTS WANTED.—The Directors of the Reform Freehold Land and Building Society invite TENDERS for the CONSTRUCTION of a ROAD, on their estate at Carshalton.—The plan and specification may be seen on application at the Chief Office, 147, Cheapside ; and sealed Tenders to be delivered, addressed to the Chairman of the Survey Committee, on or before the 11th of NOVEMBER next

By order, A. KINTREA, Sec.

London, October 27, 1855.

THE ESTATES COMMITTEE of the CORPORATION of the SONS of the CLERGY will MEET on FRIDAY, the 9th of NOVEMBER next, at ELEVEN o'clock in the forenoon, to receive TENDERS for a BUILDING LEASE for 99 years, of a piece of ground on the north side of Pancras-lane, Queen street, Cheapside. Printed forms of Tender may be obtained of J. C. BAKER, Esq. the Registrar, at 2, Bloomsbury-place, Bloomsbury-square ; of Messrs. HUNT and STEPHENSON, 4, Parliament-street, Westminster.

PUBLIC HEALTH ACT, DISTRICT of HEANOR.—The Local Board of Health for the District of Heanor, in the County of Derby are desirous of BORROWING, under the provisions of the "Public Health Act 1848," upon the security of the rates authorised to be levied under said Act, a SUM of MONEY not exceeding 2,000l. for the construction of Water works, to be repaid by certain annual instalments, with interest. Persons willing to advance such sum, or any portion thereof, are requested to forward Tenders to me on or before the 12th NOVEMBER, stating the rate of interest upon which such advance will be made. By order,

R. BIRCH SPENCER, Clerk to the said Local Board.

Basford, Notts, Last 13th October, 1855.

CONTRACTS.

TO CONTRACTORS.

HEANOR (DERBYSHIRE) WATER-WORKS.—The Local Board of Health for this district are prepared to receive TENDERS for the execution of the following CONTRACTS :—

CONTRACT No. 1.—The Manufacture and Erection of a HIGH-PRESSURE STEAM-ENGINE, BOILERS, and PUMPS, capable of raising 86,000 Gallons of Water 350 feet high in twelve hours.

CONTRACT No. 2.—The Sinking and Steining of a SHAFT, six feet clear diameter, and about ninety yards deep.

CONTRACT No. 3.—The Construction of an ARCHED BRICK SERVICE RESERVOIR, sixty feet square, and twelve feet deep.

CONTRACT No. 4.—The Manufacture and delivery of about five miles of CAST IRON PIPES from two inches to six inches in diameter.

CONTRACT No. 5.—The Supply of the requisite SLUICE VALVES and HYDRANTS connected with the above Pipework.

CONTRACT No. 6.—The LAYING, FIXING, and JOINTING of the above Pipes, Sluice-valves, and Hydrants.

The drawings and specifications may be inspected, and forms of Tender and bills of quantities for Contracts No. 2, 3, 4, and 6, may be obtained on payment of half-a-crown each copy, and other information had, by applying at the Office of Mr. JOHN S. NORRIS, of Nottingham, the Engineer to the Local Board. Tenders will be accepted for any single Contract, but the Board would prefer letting the works to parties tendering for two or more Contracts. The Tenders are to be delivered at my Office in Basford, Nottinghamshire, on or before MONDAY, the 12th day of NOVEMBER next.

R. B. SPENCER, Clerk to the Board.

Basford, Oct. 18, 1855.

GREAT GRIMSBY WATERWORKS and DRAINAGE.—The Local Board of Health of Great Grimsby desire to receive TENDERS for the CONSTRUCTION of WORKS for supplying the town with water and for draining the town. The work required to be done consists of supplying and laying upwards of 10,000 yards of cast-iron pipes, making and fixing a pair of engines and boilers, and wrought-iron tank ; building tank tower, engine-house, boiler-house and various other work, according to the drawings and specification which may be seen at the Office of the Surveyor to the Local Board of Health, from the 24th of this month to the 9th of NOVEMBER next, inclusive. Tenders are to be sent in addressed to the Clerk to the Local Board of Health, Town-clerk's Office, Great Grimsby, on or before the 14th day of NOVEMBER next. The Board do not bind themselves to accept the lowest or any Tender.—By order,

GEO. BABB, Clerk to the Local Board of Health.

Great Grimsby, October 17, 1855.

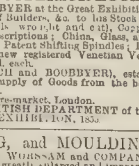
ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIESS'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIESS'S Office, 145, Regent-street, London.

TO IRONMONGERS AND THE TRADE GENERALLY.



D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on view, and marked in plain figures. Tureenes and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price list, 10s.—55 and 56, High Holborn.

HOT-WATER APPARATUS, comprising an excellent wrought-iron boiler, horseshoe shape, fitted expansion tubes and about 12 feet of socket pipe, unions, bends, &c., thoroughly adapted to heat a large conservatory or building, will be sold as a bargain.—Apply, A. Stanly Tavern, Kings-road, Chelsea.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler only is in daily operation, heating buildings measuring 500 feet in length, at the small expense per day of 8d. And labour of 8s. This achievement in heating by hot water is unprecedented.

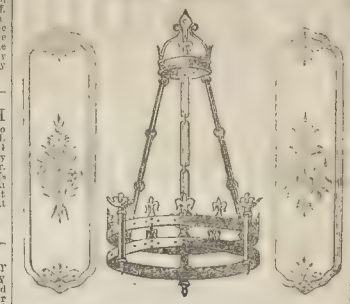
JOHN PARKIN and CO. late BLAKE and PARKIN, NEW MEADOWS STEEL WORKS, SHEFFIELD, MANUFACTURERS of CIRCULAR and MILL SAWS, IMPROVED CAST-STEEL FILES, &c. &c. For the use of carpenters and manufacts. PATENT TEMPERED MACHINE KNIVES and CUTTERS, manufacture, for planing and grooving wood, for cutting paper, iron, stone, leather, &c., to any pattern or dimensions with the utmost exactness. Warranted to work with a harder and finer edge than any other mode of temper.

INVENTORS of CORE-ANNEALED CAST STEEL for taps, pistons, &c. MANUFACTURERS of RAILWAY SPRINGS, BLISTER, SHEAR, and CAST STEEL, &c.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851. He invites the attention of Builders, &c. to his Stock of Iron-mongery, Brass Foundry, Nails wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furniture of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, &c. &c. 6d. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufacturers at the lowest prices.

14, Stanhope-street, Hare-market, London.

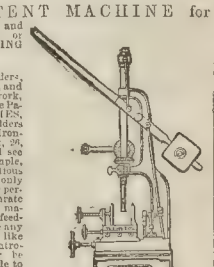


No. 1081, Class 6, Section 16, BRITISH DEPARTMENT of the PARIS UNIVERSAL EXHIBITION, 1855.

SAWING, PLANING, and MOULDING MACHINERY.—SAMUEL WORNHAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on Land Machinery cut, steadily, and ready made, so that they can at all times supply orders promptly. S. W. and Co. beg to state that they call particular attention to this sort of machinery, and have had the honour of supplying some of the most distinguished contractors in the world with their Machines for home and foreign use.

THOMAS EDINGTON, PURCHASER and INSPECTOR of CASTINGS on COMMISSION, 17, GORDON-STREET, Glasgow.

HART AND SON,

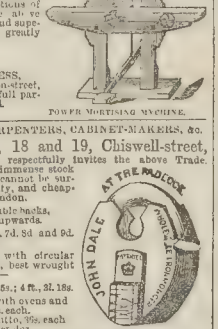


PROPRIETORS AND MANUFACTURERS OF PITT'S PATENT SELF-ADJUSTING SPINDLED DOOR FURNITURE.

GAS STANDARDS, CORONAS, SCONCES, &c.

53, 54, 55, & 57, WYCH-STREET, STRAND.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.



House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 20, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

F.S. Steam Engines and Machinery contracted for.

VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

PRIZE MEDALS have been awarded to these celebrated Machines both by the Great Exhibition in London, and many scientific institutions. They are extensively used throughout the United Kingdom by joiners, contractors, coach and cabinet makers, railway carriage and wagon builders, machinists, agricultural implement makers, shipbuilders, and also by the British and French Governments, for planing and squaring up, moulding, tenoning, mortising, grooving, rebating, sawing, and boring.

Their operations are in every respect perfect, either in hard or soft wood, and will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost.

POWER MORTISING MACHINE.

Sold only by WILLIAM FURNESS, Agent, No. 20, Lawton-street, Liverpool, from whom full particulars may be obtained.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

NAILS and IRONMONGERY, from BIRMINGHAM direct.

Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the

LOWEST BIRMINGHAM PRICES a complete LIST of which will be forwarded upon application.

FREDERICK BLYTH, Nail Manufacturer and General Factor, Regent-parade, BIRMINGHAM; or at 16, Gresham-street, LONDON.

CLARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby destroying Smoke.

This invention is now in operation upon Steam-engine Furnaces, of Cornish and Wagon Boilers, and upon Ovens. It is adapted to other descriptions of Furnace, such as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most perfect of the inventions extant in subduing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.

Ten furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS, BROTHERS, Nine Elms, London.

Address, THE SMOKE-BURNER COMPANY, Nine Elms, London.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Instructions for erecting, with the point and all staples complete for fixing, at on. shilling the foot.

R. S. NEWALL and Co.'s Patent Copper Rope Conductor is being used by Architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne, 13a, Strand, London. 67, Hyde-park-street, Glasgow. 27, Dale-street, Manchester.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINE, can be obtained of all ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY, Established 1774.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS, THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of UNITING LEAD TO LEAD WITHOUT SOLDER.

Lessen Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

IRONMONGERY.

PFEIL AND STEDALL.

THE LARGEST STOCK AT

THE LOWEST PRICE,

5 AND 6, BROAD-STREET, BLOOMSBURY.

N.B. Several high-pressure Engines for Sale.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE, Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, cast-iron Goods, and STEWART'S PATENT CAST-IRON GAS and WATER PIPES. Office, No. 7, Sise-lane, London.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

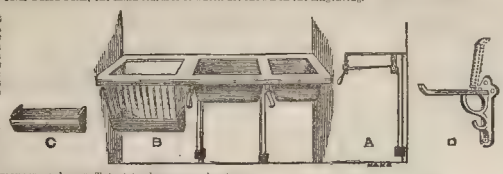
IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.



THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

NEW PATENT INVENTION FOR STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street,

...e made important additions to their original Invention of PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, the main features of which are shown in the Engraving.

...t represents the Patent ...iter-guide and Collar-rein, ...shull of which is taken to the ...k of the manger-works with ...dom and easy up or down ... guide-bar, and is noiseless ...te operation, also a sure ...reventative against the most ...ive horse being cast in the ...l.

..., The Patent Portable Seed- ...can be instantly detached ...n the rack without disturb- ...the hay. The saving of the ...l in a clean and useful state, ...ser for agricultural purposes,

...mixing with the food in the manger, is alone sufficient to claim general notice.

... The Seed-box detached, made of galvan...ed sheet iron, is at once durable.

..., The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an ...ject, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAM'S MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, ...rable, and impervious to infection. Manufactured plain, galvanized, and enamelled.

IMPROVED SURFACE-DRAIN, with safety covers. Sanitary Traps, Stable Pumps, Loose Box Fittings, Gutta percha Pre- ...ving Saddle and Harness Brackets, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-iron ...rk for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

Estimates and Catalogues on application.

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

SKAIFE'S GALVANIZING WORKS,

COMMERCIAL-ROAD, LIMEHOUSE, LONDON.

...kaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required.

Patent Galvanized Iron supplied in every form.—Sheets plain and corrugated.—Roofs fixed complete.

J. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, Plumbic Zinc, and Tiles.

AN ALLOWANCE TO THE TRADE.

THE LIVERPOOL AND MANCHESTER

ATENT GALVANIZED CORRUGATED IRON WORKS,

AND IRON ROOFING MANUFACTORY.

... Head Offices: 13, JAMES-STREET (late the Coalbrookdale Company's Premises), LIVERPOOL,

Four ft. six in.	12 12
Five ft.	14 14

Coupings, per foot, Three-pence, per foot

This valuable KITCHEN RANGE, the Most Useful Invention of the present day, is now in use in many hundreds of houses in the several years, and given the most satisfaction. It may be used either with the fire open or closed, thereby enabling the cook to roast in front, and at the same time set all the fire at all times shut up, which is well known to generate a close unwholesome vapour.

The Prize Medal and Honourable Mention was awarded to this Range at the Great Exhibition of 1851.

To be seen in operation at the Manufactory.

J. SHERWIN, 4, TABERNACLE-WALK, FINSBURY.

Castings of every description in Loam or Sand.

Estimates given for any description of Wrought and Cast Iron Work

THE IMPROVED CHIMNEY-COWL,

MANUFACTURED OF MOREWOOD AND ROGERS'S PATENT GALVANIZED TINNED IRON, JAPANNED STONE COLOUR.

Combines a perfect and ready action, with facility of sweeping and freedom from noise; and the working parts being wholly contained in the Dome Top, impervious to Smoke or Weather, it is not liable to become out of repair, and effectually prevents the annoyance experienced in gusty weather, or where the Chimney is subject to the Eddies produced by a higher building. A Lithographed Drawing and Description can be had of

A. WHYTOCK, Manufacturer, 494, NEW OXFORD-STREET,

Where Prices and Particulars may also be obtained on application.

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SUTER'S PATENT WIND-GUARD.—This Guard allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.

To be had of Ironmongers and Builders; and of the Patentee, at his Office, 65, Fenchurch-street, London.

NO CHIMNEY WANTED for RICKETS'S

PATENT CALORIFERE GAS STOVES.

In Churches, Halls, or Shops, and for Conservatories, or any close apartment, a pipe can be attached to carry away the burnt air.

RICKETS'S CHEAP GAS STOVE,

Price, £1. 15s.

Made of Sheet Iron, suitable for Heating small Countinghouses, Bedrooms, Cellars &c. &c.

MANUFACTORY, AGAR-STREET, STRAND, LONDON.

Liberal Discount to Builders.

P. O'CONNOR'S PATENT LEVER HINGE.—The most perfect and simple INVENTION for CLOSING SWING DOORS and GATES yet produced. The motive power being a weighted lever, it may be easily adapted to any size door, and is not liable to get out of repair as spring hinges generally are. May be had from all Ironmongers and Factors; J. CARTLAND and SON, Manufacturers, Birmingham; or from the Patentee, F. O'CONNOR, Ironmonger, Wavertree, Liverpool.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, conchhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

212° MILNER'S HOLDFAST and FIRE-RESISTING SAFES (non-conducting and vaporizing) with all the improvements, under their Quadruple patents of 1849-51-54 and 1855, including their Gunpowder Proof Solid Lock and Door (without which no safe is secure).
THE STRONGEST, BEST, AND CHEAPEST SAFEGUARDS EXTANT.

MILNER'S PHŒNIX 212°, SAFE-WORKS, LIVERPOOL, the most complete and extensive in the world. Show-rooms, 6 and 8, Lord-street, Liverpool. London Depôt, 47a, Moorgate-street, City.—Circulars free by post.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.

THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocadella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account, Mr. Thompson being no longer his agent.

Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

THE LONDON and PENZANCE SERPENTINE COMPANY having just opened an extensive SHOWROOM, at No. 18 Wharf, Macclesfield-street North, City-road, for the sale of CHIMNEY-PIECES, and other articles, useful, architectural, and ornamental, invite Architects, Builders, and the trade generally, to inspect the same. A large assortment of fancy articles are also always on sale at the Company's Stall in the Mineral Manufactures Court, in the Crystal Palace, Sydenham. Estimates given, and orders promptly executed.
July 25, 1855. C. AGENEY, Secretary.

THE LIZARD SERPENTINE COMPANY manufacture and sell in block and slab, the beautiful Stone now raised from the lower beds of their Quarries. Chimney-pieces, Columns, Fonts, and ornamental works on view, at 20, Surrey-street, Strand.

HENRY COX, Manager at the Lizard.
F. W. RUFFLE, Agent in London.

MARBLE and STONE CHIMNEY-PIECES.—WM. HUSTLER, Marble and Stone Sawing Mills, Cambridge-heath, Hackney, begs to call the attention of the Trade to his STOCK of CHIMNEY-PIECES, suited to all classes. W. H. has enlarged his workshops and improved his machinery, so as not only to compete, but is able to sell lower than any other house in the trade.

N.B.—Good marble mason and polishers wanted.

MARBLE.—The Italian Marble Company, Importers of the produce of their many quarries in the province of Massa Carrara, Italy, beg to inform the general marble trade in the United Kingdom that they are prepared to undertake Contracts for any quantity of Statuary, Veined, Sicilian, Bardilla, Dove, and other Marbles, in blocks, of all dimensions, delivered on shipboard at Leghorn, or in dock, London. A constant stock is always kept at the London Depôt. Orders for Paving Slabs, Garden and Hall Statues, Vases, Tazzas, Consoles, &c. executed and delivered at reasonable rates.—For further particulars apply at the Offices of the Company, 18, Cannon-street, City.
WILLIAM W. BONNIN, London Secretary.

THOMAS TILNEY, YORKSHIRE STONE MERCHANT, Tanfield-place, Leeds.—To Builders and Buyers of the Best Quality.—Direct from the Quarries in truck-loads of five tons. Pavings, Landings got out to sizes, Steps, Copings, &c. &c. supplied on most advantageous terms by railway, and with despatch. Prices sent on application.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS, MILLBANK-STREET, WESTMINSTER.
Marble of all kinds and of best quality, in block and slab. Marble mortars, &c.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lea Wharf, Waterloo-bridge. Office: 246, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, and Co.), Caen-wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to supply from their Wharf, as above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace. Supplied by the Haytor Company, under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 3, Pinner's court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

PIMLICO MARBLE WORKS, BELGRAVE-WHARF, LOWER BELGRAVE-PLACE.

SAMUEL CUNDY.

THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL.
PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

MARKET-WHARF, REGENT'S-PARK BASIN.—WEST-END DEPOT, for Yorkshire Paving Portland and Derby Stone, Bangor Slates, Slabs, &c. All Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

NORTH-WESTERN STONE DEPOT Hampstead-road Bridge, Camden-town.—W. ASPINALL begs to call the attention of Contractors, Builders, and Masons, to his Stock of Portland, Park Spring, Potternewton, Hare-hill, Bath, Caen, and other Block Stone; York Paving, Landing Steps, Sinks, Sills, &c.; Park Spring, Robin Hood, Hare-hill Landings and Slabs. Also, Aberdeen, Guernsey, and Hayton Granite Curb and Pitching, all at the very lowest prices.
N.B. Good 2-inch Tooled Paving, at 40s. per 100 feet, cash.

AUSTIN'S ARTIFICIAL STONE.—This material frequently confounded with Portland Cement has now been in extensive use among the highest class of residences for about twenty-five years. During that time a collection of Ornamental Work, such as Vases, Figures, and Fountains, has been accumulating, of which the public have scarcely any idea. Suffice it to say, that a single copy of each work would collectively amount to between 4,000l. and 5,000l. In contradistinction from Terra-cotta, and all other kind of Pottery, there is no distortion in form by the process of baking, and, instead of the glazed surface of Terra-cotta, it has the closest resemblance to Portland Stone, having also the advantage of being waterproof.—AUSTIN and SEELEY, Nos. 1 to 4, Kempt-row, New-road, Regent's-park.
*** A large Stock of Ornamental Chimney-tops.

GROUND FLINT AND CORNISH STONE, UNADULTERATED,
Manufactured by MACHINERY, which produces the greatest degree of fineness.
WILCOX & CO.
Flint Mills, Millwall, near Scott Russell's.
CARRIAGE FREE.

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal-road, Kings-cross, London, continue to supply the trade with all descriptions of Marble in Block and Slab, at the lowest prices.—N.B. A good stock of Statuary Slab on hand, suitable for shelves.

VALENTIA SLATE SLABS.—The Valentia Slate Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Work, Model Prisons, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; and by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

LLANGOLLEN FLAG and SLATE COMPANY.—The present proprietors of the Quarries, formerly worked separately by the Llangollen Flag Stone Company and the Llantysilio Slate Company, are now prepared to supply architects, contractors, slate merchants, builders, and others with FLAGS, SLATES, and SLABS of every description; Cistern, Chimney-pieces, Baths, Filters, Larders, Mangers, Ridging, and every other article made of this beautiful material, all of superior quality. The Llangollen Slabs, from their great durability, of the enormous sizes in which they can be obtained, are particularly adapted for the paving of railway stations, malthouses, breweries, conservatories, warehouses, &c. A cheap variety of split-faced flags for street paving, &c. can be supplied at the moderate prices.—Prices and further particulars can be had on application to Messrs. JOHN TAYLOR and SON's, 6, Queen-street, Upper Thames-street; Mr. S. VENABLES, at the Company's Premises, 4 Wharf, South Wharf-road, Paddington; or to Mr. GEORGE P. DYKE, at the Works of the Company, Pentrefelin Wharf, Llangollen.

TO BUILDERS and Others in Town and Country.—For PRICES of BANGOR SLATES, apply to SCOLES and WOOD, Market Wharf, Regent's-park.

ENAMELLED SLATE.—REDUCTION IN PRICE. Mr. MAGNUS having completed some new machinery, is enabled to announce a further reduction in price on the shape of a large and increased discount to the TRADE. The best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 39 and 40, Upper Belgrave-place, Pimlico.

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c.
ENAMELLED SLATE CHIMNEY PIECES, of elegant designs and superior workmanship, great variety, at prices from 21s. to 10 guineas. Slate Cisterns to any size. J. HOWELL, Manufacturer, 5, Cook's-ground, King's-road, Chelsea, Middlesex.

CLARK & CO.'S

NEW PATENT IRON AND WOOD REVOLVING SHUTTERS

ARE CHEAPER, MORE SECURE, MORE DURABLE, AND HAVE A BETTER APPEARANCE THAN ANY OTHERS.

BRASS AND GLASS SASH-BARS OF EVERY PATTERN, BRASS STALL-BOARD PLATES, &c. &c——PROSPECTUSES AND ENGRAVINGS FORWARDED.

CLARK & CO. 15, GATE-STREET, LINCOLN'S-INN-FIELDS, LONDON.

THE SEVRES GLASS COMPANY.

LEGENDRE, TURPIN, AND CLARK

Take leave to inform the Trade that they have

OPENED AN ESTABLISHMENT FOR THE SUPPLY OF PLATE AND WINDOW GLASS, SHADES, POTICHE, LAMP AND OTHER GLASSES, ALSO WINE, SPIRIT, AND BEER BOTTLES, AT

131, UPPER THAMES-STREET, LONDON-BRIDGE.——WORKS: SEVRES, NEAR PARIS.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

ARCHITECTURAL AND ORNAMENTAL DECORATIONS.

Architects and the Trade are respectfully invited to inspect specimens of the

Show-rooms, 40, Broad-street-buildings, City; 4, Russell-place, Fitzroy-square; 112, New-street, Birmingham, &c. &c.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required. 4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor-cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 8d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 3s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

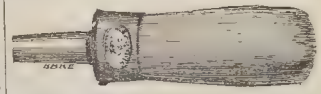
WINDOW-BLINDS.—J. FULLER, Manufacturer, 29, Charlotte-street, Blackfriars-road. Established, 1830.—Venetian Blinds, from 8s. each, or 8l. per foot; Wire ditto, 7s. each, or 1s 9d. per foot. Hand ditto, from 5s each, or 1l. per foot. Every other description of Blinds equally low, warranted of the best manufacture. Discount to Builders and the Trade. Fixed complete.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT.—Second Testimonial.—March 19th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

TO ENGINEERS, MACHINE MAKERS, AND OTHERS.



CHARLES MACINTOSH and CO., Patentees and Manufacturers of the VULCANIZED INDIA RUBBER in all degrees of elasticity, recommend this material as capable of sustaining the action of hot or cold water, gas, steam, acids, and grease. It is used extensively for valves in marine and land engines, railway buffers and springs, washers for pipe-joints, hose and tubing; also for cushions, acid pumps, alkali, cisterns, &c. &c. Articles moulded or otherwise, made to any size or figure.—Address 3, Cannon-street West, London; and Cambridge-street, Manchester.

N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Gloswell mews, Gloswell-road, London

HAWKINS'S PATENT BRUSH COMPANY.—Manufactory, 17, College hill, Cannon-street West, London. Merchants, Artists, and Others, would do well to call at Hawkins's Retail Establishment, as their superiority in every respect being now established by use. Prices and full particulars can be had, and samples seen, at my Offices as under, or at the Manufactory as above. Mr. FRANCIS FORD, 9, Lawrence Pountney-hill, Cannon-street, London, Sole Agent for London and its vicinity.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long-neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and of a construction hitherto before accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Compass, and cased on a new system, which gives a superior tone and facility for ringing.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street, City. Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

PAPIER MACHE AND CARTON PIERRE ENRICHMENTS MANUFACTORY,

49 & 50, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

For the attention of Architects, Builders, Decorators, and others, to their large assortment of ENRICHMENTS in every style, executed in the best class of art. Furniments for ceilings of every period, elaborate or simple, Gothic, Elizabethan, pendentive or flat, Louis XIV in much variety, and in accordance of cost, Italian and Greek Renaissance, also many in mixed styles, executed for the first houses and from designs of architects of the highest eminence; wall dressings, rich friezes of every period, rich Elizabethan and Gothic Dados, in many designs. Dwarf cups, Mouldings, and Dressers.

A large assortment of Gothic Bosses to many varied intersections of all sizes, tracery and panels.

Carved headings for church works, organ dressings, of most periods, and faithfully executed to the traceries of each. The general decorations of Drawing and Dining Rooms, Libraries, &c. of very considerable extent, as furniture, glass frames, tables, window cornices, screens, candelabra, and the whole range of accompaniments to reception-rooms of the first class, as well as more subdued.

The facilities and repeated enlargement of means enable GEORGE JACKSON and SONS to announce the execution of works of the above descriptions in these advantageous materials at a cost considerably below any known method, while for quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

PLAN FOR THE CURRENT YEAR.

THE LIST IS NOW OPEN, AND EVERY SUBSCRIBER OF ONE GUINEA WILL BE ENTITLED TO—

I. An Impression of a Plate, by J. T. WILLMORE, A.R.A. from the original important and well-known picture by Sir EDWIN LANDSEER, R.A. and Sir AUGUSTUS CALLCOTT, R.A. "HARVEST IN THE HIGHLANDS;" and

II. The chance of obtaining one of the Prizes to be allotted at the general meeting in April, which will include—

THE RIGHT TO SELECT FOR HIMSELF A VALUABLE WORK OF ART FROM ONE OF THE PUBLIC EXHIBITIONS.
STATUETTES IN BRONZE OF HER MAJESTY ON HORSEBACK, by T. THORNEYCROFT.
COPIES IN BRONZE, from an original Model in relief by J. JEFFERSON, of "The Entry of the Duke of Wellington into Madrid."
STATUETTES IN PORCELAIN OR PARIAN.
PROOF IMPRESSIONS OF A LARGE LITHOGRAPH, by T. H. MAGUIRE, after the original Picture by W. P. FRITH, R.A. "The Supper Scene," from Molière's "*Bourgeois Gentilhomme*."

The Prints of "Harvest in the Highlands" will be ready in February next. A subscription of Ten Guineas entitles to a Proof of the Plate, before letters, on India paper, and Ten Shares in the distribution of Prizes. A subscription of Five Guineas, to a lettered Proof on India paper, and Five Shares.

The Prizes consist of the right to select, by the Prizeholder himself, a Work of Art of the value of Ten Pounds to Two Hundred Pounds or more, from the Public Exhibitions of the current year, under certain regulations; also of Statuettes and other Works in Bronze, Iron, and Porcelain, produced expressly for the Society, and of Impressions of Fine Works engraved or lithographed solely for distribution as prizes. A General Meeting of the Members is held on the last Tuesday in April, at which the Prizes are publicly distributed by lot, by two ladies then chosen, and each Member who gains a Prize receives intimation of it by the same night's post. The Council select Works of Art for such Prizeholders as desire it, and for all those residing in distant parts of the world who may not have delegated the selection to friends in this country.

444, West Strand, Nov. 1, 1855.

GEORGE GODWIN, } *Honorary*
LEWIS POCOCK, } *Secretaries.*

LOANS from 25*l.* to 1,000*l.* upon approved personal or other security, repayable by easy instalments, extending over a period proportioned to the amount borrowed. TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen, &c. and of "London" as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he feels aware of the points essentially necessary to be attended to. Drawings and Sketches lithographed in a superior manner. Address, Mr. BOYS, 32, Albany-street, Regent's-park.

PARLIAMENTARY PLANS and SECTIONS, Books of Reference, Bills of Quantities, Specifications, Plans for Prospectuses, Briefs, Circulars, &c. LITHOGRAPHED on the shortest notice, and at the lowest possible price. Any other description of Lithographic and Letterpress Printing executed on the premises.—METCHIM and BURT, 2 and 55, Parliament-street, Westminster.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth near Astley's Theatre, begs to call attention to his Stock of Instruments manufactured by superior workmen of the first class, offered at considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, Dividers, &c. at equally low prices. An illustrated price-list will be forwarded by return of post, on application.

N.B. A few New and Second-hand Levels and Theodolites always for sale.

TO PATENTEES, INVENTORS, and MANUFACTURERS.—R. COCKS, Jeweller, 261, Oxford-street (two doors east of the Pantheon), has appropriated a portion of his Premises to the EXHIBITION and SALE of PORTABLE INVENTIONS, patented or otherwise, at a trifling commission or weekly rent for each article. The Premises are double fronted, and in best position for Patentees and others unfamiliar with the Trade to try, test, and introduce their Inventions to the Public, which being the resort of numerous visitors from all parts of the country, favourable results may be obtained. Small lots of Stock also received for Sale. Terms and full particulars on application.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES. Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural, Civil Engineering, and Mechanical Drawing, Colouring, Shading and Tinting, Ornamental and Water-colour Drawing, Perspective, Isometrical, and Geometrical Drawing, Making, Finishing, and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, Measuring and Valuing Builders' Work, &c. &c. Term 8 – Day Pupils Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter. There are no extras, the terms include the whole of the above, with the use of Drawing Boards, T Squares, Plans, Drawings, Models, &c. Prospectuses and full particulars may be had at the Offices, 24, Guilford-street, Russell-square.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper.—Apply to Mr. S. BARLOW, 3, Thavies-inn, Holborn (between 1 and 2 p.m.); or to Mr. H. B. BARLOW, Office for Patents, Ducie-place, Exchange, Manchester.

TO ENGINEERS AND ARCHITECTS.

LEVELS, price 6*l.* of first-class work, consisting of a 16-in. telescope adjusted by rack, sun-shade, parallel plates on tripod stand, or jointed legs for use in a coal-pit. The instrument is perfectly adapted for draining.—To be had of the maker, JOHN DAVIS, Opticain, Derby.

The Builder.

VOL. XIII.—No. 665.

WE continue our contributions to the History of Modern Architecture.* In 1810, the continuation of Cologne Cathedral appeared to Boisserée a desired object, which it would be hopeless to realize,—or, except "under the special favour of a mighty prince, and the auspices of a long and happy peace." But, in 1814, the event seemed possible: the French were no longer in Cologne, and the Rhenish provinces were attached to Prussia. Projects for all kinds of public works were entertained. But, although a loud appeal was made to defer everything in favour of the completion of the cathedral, the spirit for restoration and for revival in one class of art-works, had yet to reach its development. Boisserée, however, was not idle, and good fortune befriended him.

A scene-painter happened to be engaged at an inn at Darmstadt in getting up a decoration for a festival. He discovered, nailed on a stretcher, so as to be used for the purpose of drying beans, a piece of parchment, 13 feet by 3 feet 2 inches, on which appeared, and in good condition, a well-executed drawing. It was, in short, the original design for the northern tower of the cathedral, including the whole spire and the greater part of the western front. Boisserée was at once informed of the discovery, and was able to secure the valuable document. But this was not the only discovery. In Willemin's "Monumens Français Inédits," the publication of which commenced in 1806, there is a plate representing a great western window, with the name Peter Van Sardaam below. Boisserée found that this window so far corresponded with the Cologne design, that he wrote to the editor of the work in Paris—though, it would seem, only under the idea that some general information might be afforded him as to the Cologne school of architecture, and the name Van Sardaam. It turned out that there was a large drawing in the editor's possession, from which the engraving had been taken, the name having been appended to the latter by the editor, without any authority. This drawing Boisserée purchased, and was delighted to find that it was one showing the *southern* tower of the cathedral,—being, in short, the fellow drawing to the one he had already acquired. The second drawing was not in good condition, and a name upon it, which might have been that of the architect, was too much obliterated to be deciphered. With this drawing were too smaller ones, showing part of the choir. The first disappearance of the drawings is fairly chargeable to the French, during their occupation of Cologne, referred to in a former article.

Again, however, years elapsed, and the crane which had stood for centuries on the unfinished tower, fell down. The feeling of veneration which appears to cling to all who dwell under the shadow of a great cathedral, extended even to this long-disused piece of mechanism; and the erection of a new crane at Cologne, was the first practical inauguration in Europe of the spirit of architectural *restoration*. This was in the year 1819; and such was the importance of the event in the eyes of the people of Cologne, that a history of the town, published in the following year, is dated, "1820, the year after the erection of the new crane upon the tower of the cathedral."† The Crown Prince of Prussia shortly afterwards visited the cathedral, and took so much interest in the building, that its condition was reported upon, and money voted for the roof and other seriously defective parts. The Prussian finances, though barely reinstated after the difficulties of the war, at once contributed a sum equal to 18,000*l.* with which the works were commenced in 1824. Whilst these were going on, further calculations were made as to the sum required to repair the whole building. It then appeared that an amount equal to 65,000*l.* in addition would be wanted,—thus making the whole cost of *repairs*, 83,000*l.* At this, the government hesitated, and would have abandoned the remaining works, but for the urgency of the archbishop, appointed to the restored see; who also contributed to the defrayal of expenses, by a revived tax on marriages, baptisms, and burials. The requisite provision appearing to be made, the works were commenced, and lasted during twelve years. They included every description of structural and decorative work, as the securing the roof and walls, the rebuilding fourteen of the great buttresses, pinnacles, and flying buttresses, and the repairing the remainder; the renewal of the tracery of the choir windows, 54 feet in height (all these requiring extraordinary care and skill); the repair and restoration of all ornaments; the cleaning and repair of the stained-glass, and the decoration of the interior in colour. During this time one project was put forth by the city for the completion of the whole building, by levying a tax of seven *pfennings* per head *throughout Germany*; and another (which was at one time about being acted upon), by an architect, who must surely have been cousin-German to him who "restored" the nave of St. Saviour's, Southwark,—the proposal being to dispense with the buttresses and pinnacles, putting larger piers within, and supporting the roof, as it is said, by iron shafts instead of stone groining, all ornaments being left *en bloc*. That project was stopped by the death of the architect in question. Still it was desirable to complete the cathedral; and notwithstanding what had been done, it appears that the choir was considered somewhat unsafe without the support of the portion adjoining, as intended in the original plan. The appointment of Herr Zwirner as *Dombau-meister*; the succession of the Crown Prince to the throne; the seizure of the opportunity to raise the enthusiasm of the German people; the formation of the *Dombau-Verein*, or Cathedral-Building Society; and the petitioning of the new sovereign on his coronation in September, 1840, and the eventual prosecution of the work, are matters which might form an interesting story; but would lead us to dates somewhat more recent than those to which we would just now make reference. That however, to which we wish to draw attention, is the steady growth in Europe, of this desire of "restoring" architectural monuments. We have given the cathedral of Cologne, as an instance; but a similar spirit was at work in France, and at our own cathedrals. It is true, that for many years, either proper professional knowledge was wanting, or it did not occur to the guardians of fabrics how important it was to make a wise election as to such assistance. But, the desire was growing; and in certain cases, the common mason of the fabric made his work a labour of love; and the enthusiast who is ever to be found, the student of that only pile, kept jealous watch and ward over the hazardous duty of the "restorer." That such veneration for one work of mind should grow into the nature of a man, is no more to be wondered at, than that others should devote their lives as many do, to the study of a single poet, or other author; and that the fact as to many of the great cathedrals is as we put it, we think will be known to any one who has spent much time about those structures. The fine work of G. and L. Kreutz, on St. Marc's, at Venice, is one of the results of such veneration; but at home, Halfpenny's book on the Gothic Ornaments in York Cathedral, published in 1795, is an equally suitable illustration. At York, the restoration was wholly consigned to the mason; and as the work of a time when little attention generally was given to Gothic details, it must be considered as very successful. At Henry the Seventh's Chapel also, the works by Gayfere were well executed; though the stone was a most unfortunate selection.

Returning to the progress of modern Germany in art, the love of archæological research to which was due the growth of the spirit of *conservation* and "restoration," was not limited in its scope and its results to mediæval art. No nation has contributed more to our knowledge of Greek antiquities than have the Germans. The architect Klenze himself is known to have paid great attention to this branch of archæology, and though some of his own works may be more nearly reproductions of antique forms than such efforts should be with us in future, he has offered ample proof—though with the work of Elmes at Liverpool, it may not now be needed in England—of the possibility of combining the results of such study with breathing art. To Schinkel, and Klenze both, belongs prior claim to praise which has been accorded to Elmes—that of having afforded a triumphant vindication of the ever-living power of Greek art. With them the knowledge of such art neither stopped with the mimicry of a few forms, nor did it interfere with invention and design. Concurrently, however, with the growth in Germany of a new and worthy school of ART in architecture, was the gradual progress of the revivalism which has been alluded to, and these several forms of development,—archæological research; conservation and restoration of monuments; and reproductive imitation—each ranging over several different styles—should be fully comprehended as facts, before entering upon the study of the extraordinary state of architecture which succeeded both in England and Germany.

The quarterly organ from which we derived some of the particulars of the Cologne restoration, in another number, says,—"We must own to being sceptical about revivals in general;" and alluding to the comparison of Raphael Mengs with Raphael of Urbino, and to other circumstances, proceeds:—"It is not for us, however, to wonder with a kind of contempt that such revivals should have been hailed and followed by the hope and faith of the generation to which they belonged. Men's minds are too full of satisfaction at what is aimed at, to be fair judges of what is done. They are too warmly possessed with the praiseworthiness of the effort, coolly to estimate the value of the result; and it is only when the halo of such an enthusiasm has passed away, and the works are seen by their own unassisted light, that the world can pronounce whether they are real or sham. Then comes the reverse, as in the nature of things must be—what they pretended to be, from being their greatest virtue becomes their greatest sin, so that scarcely what they really are has a chance of being valued at its proper worth." Though the writer is speaking of a period so recent as the year 1846, the same spirit, as we have shown, had been growing from a date much earlier, so that we may with advantage proceed with the quotation:—"In such a mood of deification are the Germans now. They see the highest objects striven for with the most fervent zeal. They see men of intellect, education, and goodness devoted to the art; not from the thirst of gain, vanity of display, or ambition of fame, but, as much as in human nature lies, from the pure love of art itself. They see academies founded, exhibitions opened, public works carrying on; in short, all the outer paraphernalia of a great artistic period,

† "Quarterly Review." No. CLVI. October, 1846. "The Cathedral of Cologne."

and believe, as is most natural, that great artists must be at the bottom of it. This we believe also in part, though by no means in their power of judging them; we believe that there are men of great capacity and fine feeling among these German painters, but we doubt whether there be one, who will occupy the same place in the judgment of posterity as in the enthusiasm of the present day.* Those who would pursue the inquiry into this branch of our subject, may do well to consult the work of Count Raczynski, "Histoire de l'Art Moderne en Allemagne."

The revival referred to was a national and general one, acting primarily through the poetry and literature of the German people, aided, doubtless, by the pride of recovered liberty. The long habit of resorting to French taste was eradicated, partly because on open sore on that side was still rankling, but more, because the German history and mythology presented really, materials in which native art might produce works to rival the antique. The German-Greek, to which we have referred as the most valuable of the styles of architecture which came into use of course exhibits this spirit in a less degree than the general arts of poetry, painting, and sculpture: but it nevertheless—whilst seizing that attribute of the old Greek to which we have said too little importance has been attached, in England—elevated the character of the architecture, by making those sculpturesque accessories in unison less with Greek than with Teutonic history and associations. Still the revivalism extended in architecture far beyond that of the field of Greek archæologists, and even beyond the Mediæval and German associations which had grown up,—and of this tendency the State of Bavaria was shortly to present a most remarkable exemplification. The revived Gothic of Germany, however, we confess ourselves unable to appreciate.

HERALDRY IN ITS CONNECTION WITH ARCHITECTURE.†

From the very earliest periods in the history of mankind, of which any authentic records remain to us, we find it to have been a usage universally prevalent, for both individuals and communities to be distinguished and known by some *sign*, *device*, or *cognizance*.

On many occasions the use of some such distinctive insignia would be not desirable merely, but actually necessary. Thus, in the ratification of important documents, whether of a public or a private character, it would be requisite for the contracting parties to be provided with seals, which, both at the time then present and throughout all time to come, might appear as their corroborative witnesses. Again, the seal or signet of a potentate would form a peculiarly expressive as well as a most consistent symbol of high trust or of delegated authority. The same device with which the seal would be charged would also provide a ready and appropriate mark for various articles of property, as it might be employed for purposes of decoration and adornment. And then in war—that terrible condition of human life, which occupies so prominent a position in the history of past ages—some modification of the device of the chief would naturally be adopted by his followers, as being at once a token for mutual recognition and a sign of community of feeling and purpose; while the presence of the chief himself would be indicated by the display of his cognisance about his own person upon his dress, his armour, and his shield, and also upon some banner or ensign which might be raised aloft, and so be seen and distinguished from afar. In process of time, certain devices would be naturally invested with national as well as with personal symbolism: they would be held to express the sentiment of a people's nationality with no less significance, than to denote the individuality of certain personages and the succession of particular families.

† Read at the Architectural Museum, Canon-row, Westminster on Monday evening, October 1st, 1855, by the Rev. Charles Boutell, M.A.

The idea of symbolical expression appears to form one of the component elements of the human mind in its present condition. Through the agency of such figurative imagery, the mind is able both to concentrate a wide range of thought within a very narrow compass, and to give to the whole a visible form under a single image. Thus can the mind speak to the eye, each word being an ample volume; it can by such blazonry convey not only a multiplicity of definite impressions, but it is also by this means empowered to combine the imaginative with the real, and, while extending its speculations beyond the bounds of ascertained verities and actual facts, to impart a definitive character to the visions of the imagination.

The mind of the Oriental, which, in its entire scope of thought and tone of feeling, sympathizes after so remarkable a manner with the gorgeous aspect of nature in the East, and with the lavish profusion in which she there pours forth her treasures,—the mind of the Oriental would feel it to be as a primary impulse, to embody (or, at least, to indicate) under symbolical devices its fantastic reveries and shadowy imaginings: nor would the facts, the incidents, the experiences, and the manifold circumstances of actual life, be destitute of their particular symbolism. Symbols would, indeed, be a natural language with the Oriental; and by the Eastern sage in symbols would that language be written.

Accordingly, while we must admit a tendency to symbolism to be, to a certain extent, inherent in mankind in general, many of the most striking forms, both of symbolical thought and expression, were unquestionably derived by the nations of Europe from that wonderful people who, from so remote a period, were established in the valley of the Nile. Greece was the channel by which Egypt transmitted her symbols and her arts, hand-in-hand, towards the West. The particular class of symbolical devices with which we, on this occasion, are specially concerned, so far as relates to their use by ourselves in common with the other nations of Western Europe, certainly have their origin from the East. Such heraldry as might, with scarcely any modification, have been adopted by the warlike followers of Richard of the Lion's Heart, appears, nearly 500 years before the Christian era, amongst the Greek chivalry whom Æschylus has gathered in hostile army around the walls of Thebes. The splendid individuality with which the ancient dramatist has invested each one of the seven chieftains who were present at that early siege, owes its effectiveness in no slight degree to the appropriateness of the heraldic bearing displayed upon the *shield* of each, together with the minute exactness with which these several bearings are described.

These ancient Greeks, the orientals of Europe, we may entitle the fathers of European heraldry. At the same time, however (as I have already intimated), the spirit of symbolism appears to have been so far universally diffused, that we find the savage warriors of the "far West" cherishing with jealous care the distinctive insignia of their fathers and of their tribes. Such a general view of the use of these heraldic symbols confirms in a remarkable manner the theory, that they were in the first instance adopted by warriors, and that by them they were considered to have an express association with actual warfare.

There was abundant occupation for every warlike device throughout the stormy period of the Middle Ages. The Crusades then brought the rude yet gallant soldiers of the west into close contact with all that was left in Eastern lands of the refinement (if I may be permitted the expression), both military and social, of earlier times. Amongst other important results of those strange and strangely romantic enterprises, were great changes in the weapons and armour of the Western chivalry; and these changes were accompanied with the introduction of an infinite variety of armorial devices. The use of defensive armour, indeed, rendered it necessary for each warrior to assume and wear some personal cognizance, without which he could not have been distinguished. *Crests* were for this purpose placed upon basinets and helmets, and both the rich *surcoats* which the knights wore over their armour, and the *shields* which so long formed most important components of their defensive equipment, were emblazoned with some device,—whence the heraldic phrases, "*Coats of arms*" and "*Shields of arms*." These devices, thus used, partake in the ideal attributes of all symbols: they are, however, directly, and in a peculiar manner, associated either with individuals, families, or the community at large, so that they may be considered after a definite method; their varieties readily admit of classification, their characteristics may be clearly elucidated and fully set forth, and they may be subjected to certain general laws, and treated as forming a system in themselves. This classification and description, and these general laws we unite with the devices or insignia themselves, under the common title of heraldry.

I am now to make some remarks upon the *application of heraldry to architecture;* in so doing, I shall first point out certain conditions under which heraldry appears to have been applied to *their* architecture by the great mediævalists; and secondly, it will be my endeavour thence to deduce some practical inferences for our own guidance in the use of heraldry in architecture by ourselves, for such I consider to be the proper object of all lectures delivered in our Architectural Museum,—that is to say, they ought at least to aim at producing some practical results, having a direct bearing upon our own study and practice of architecture.

Heraldry, as we now understand that term, appears to have rapidly attained to a complete organization amongst the nations of Western Europe, and to have been recognised by them as a distinct science.* It was admirably suited, both to the peculiar requirements of the feudal system, and to the prevailing sentiments of the age in which it arose. It at once defined and maintained the distinctions of right, usage, and pretension, when these very distinctions were held to be matters of primary importance, and the observance of them was rigidly enforced. Combining in itself the indefiniteness of a figurative system with the exact precision of specific forms and inviolable rules, it was able to impart a fresh lustre of its own to chivalrous deeds, while it assigned to those very deeds their suitable recompense. Thus, in rewarding a valiant warrior with the right to bear and to transmit to all future generations some device which, with an accompanying word, perhaps, or sentence of deep significancy, should indicate his achievements, heraldry enhanced the glory which had been won, in the very act, as also by its peculiar method of securing for it a lasting memorial. The arms of the noble family of Hay (Marquis of Tweedale) are *three red shields* upon a shield of silver. The first of this name, with his two sons, are said to have won a battle through their own personal gallantry; and their three blood-stained shields were thereupon appointed by their sovereign to be borne by them and by their descendants for ever, as their armorial insignia, in token of their having proved themselves in the hour of peril to be the three shields of Scotland, their country. This may probably be merely a mythic legend: still it is one which furnishes an apposite illustration of the feeling which was entertained for heraldry, and also of the impression which heraldry was capable of producing: and, more especially, we here have an instance of the historical sentiment which was associated with heraldic insignia from the earliest period. The three ruddy shields of the Hays were not merely to symbolize their successful devotion in the eyes of the three trusty Scots themselves, or in the eyes of their grateful and admiring countrymen: far from this, they were designed to constitute an imperishable memorial of the men, and of what they had done for Scotland, and of what Scotland thought of them and of their deed. It is when regarded in this capacity, as a handmaid to history, that heraldry is at once so interesting and so valuable. This is also the quality (independently of all external fitness and sympathy) which, without doubt, framed the close alliance between the heraldry of the middle ages and their architecture. *Both* were essentially historical: the two in union rose to become a noble form of history. The

* Heraldry was not introduced into architecture before the Crusades.

architecture was the production and growth of the times in which it appeared: the *heraldry* grew and was developed with the growth and developement of our English national architecture. *Heraldry* symbolized the men who flourished from time to time. *Architecture* gave expression to the prevailing tone of feeling in succeeding generations, and, itself the greatest art, invited its sister arts to associate their several resources with its own.

And *heraldry* would find in the *architecture* of our country both a cordial welcome, and the most valuable co-operation: there would be an inherent sympathy (so to speak) between the strong, expressive redundant naturalness of the *Gothic*, and the singular compound of ideality and fact named heraldry: if the one would rejoice in the ornamental accessories furnished by the other, both would at once receive and impart reciprocal advantages through such an alliance in their historical capacity. The heraldic shield, while commemorating a benefactor, or denoting the influence of a particular family, would add greatly to the effectiveness of the *Gothic* spandril or boss; and the living stone of the Gothic architect would share its own faculties of display and durability with the heraldic shield.

Hence, it is easy to understand how readily heraldry was introduced, with one accord, both by architects and heralds into architecture. Heraldry made architecture more essentially, and exactly *historical*, than it could have become without it; and *architecture* exalted heraldry into a permanent record, and one which should be continually read.

We may estimate the value of *heraldry*, as an accessory to architecture, in an historical point of view, from considering how valuable to ourselves, is a group of shields of arms in an early building, or even a single shield upon some architectural fragment. Such heraldic insignia open a chapter of history before us at once: the well-known devices, and their peculiar method of artistic treatment, combined with the mouldings, or other chisel-work of the Gothic mason, tell their own tale; and this is a tale which, if not in itself complete, points out the way of readily attaining to completeness.

The singular value of heraldic insignia in architecture as exponents of history also becomes apparent in a remarkable manner, by comparing them with inscriptions carved in Gothic friezes, and elsewhere. These inscriptions are almost universally found to be more effective as a felicitous form of ornamentation, than really of much value as records: whereas in a series of heraldic devices, their historical importance is well-nigh sure to take precedence of their high worth as ornaments.

In determining the character of their heraldic accessories, the architects of the Middle Ages appear to have carefully adhered to the laws of the heralds. They thus secured for these accessories the reputation of "true heraldry," and, in so doing, they at the same time maintained their *historical accuracy*, and extended as widely as possible the range of this all-important element in their composition. *The historical capacity of heraldry is indeed measured by the degree of fidelity with which heraldic laws are observed.* Accordingly, in the heraldry of our purest Gothic architecture, we find a careful adherence to the fundamental principles of heraldry as a science. Every "coat of arms" has its own peculiar signification; and all heraldic marshalling (as the combination and arranging of several coats in a single shield, or in a succession of shields, is termed) is designed to contribute, after a certain definite manner, to the historical composition. The quarterings of a shield, and the order of the various shields which compose a group, and even the form of the shields themselves, are all adjusted upon a definite principle. The bearings on each shield are also subject to no less precise regulation: they are (with rare exceptions) restricted to such a device, or to such a composition of devices, as make up a "coat of arms," properly so called, and distinguished from all other cognizances and badges. The shield of arms, as it appears in our Gothic architecture, resembles the shield with its armorial blazonry as actually carried by the Mediæval knight; in the nature of the bearings with which it is charged, and in the fact that these bearings invariably range over the entire field, it also resembles the banner, which was altogether a distinct ensign from the pennon and the standard of the Mediæval chivalry,—distinct in this respect, that it bore the "coat of arms," and that only, and no other device. The "coat of arms" having an hereditary as well as a *personal* character, and being also in many instances invested with much contingent as well as direct symbolism, its historical value differs widely from that of the generality of merely personal badges and such like devices; and, on the other hand, the "*coat of arms*" has in it so much of personal symbolism and of a personal character, *that it requires to be, and it alone can rightly be, emblazoned upon a shield.* Accordingly, in architecture (as a general rule), the "coat of arms" has a distinct individuality of its own: it appears upon a shield, while all other devices, of whatsoever kind, are introduced into architectural compositions either by themselves or in immediate contact with some strictly architectural work,—certainly without a shield.

Deviations from this rule of restricting the shield to the "coat of arms," are very rare in architectural heraldry until a late period of the Gothic; and then the principal exceptions are small shields bearing monograms and merchants' marks,—devices, it may be added, which were designed to appear in the place of "coats of arms," when more regular heraldic blazonry was not obtainable. I may also here refer to the introduction of the symbols of the Crucifixion upon shields: shields with these remarkable bearings—the ladder, hammer, nails, spear, scourge, hyssop, the seamless garment, the dice, the crown of thorns, and the cross itself, frequently appear in late work; they were usually designated the "Arms of the Passion."

In *Monumental Heraldry* (the heraldry of monuments, which are most intimately connected with architecture itself) the same rule with reference to the shield generally obtains; but here the shield is occasionally seen charged with a personal device, as distinguished from the coat armour. Such cases, however, are strictly exceptional; and they appear almost exclusively in monumental compositions, which include in their heraldry the personal devices of royal personages.

The panels which surround the noble tomb of the Black Prince, in Canterbury cathedral, each contain (within their often-repeated cusping) a shield of arms in enamel; and these shields alternately bear the paternal "coat of arms" of that illustrious son of England,—the lilies and lions quarterly, differenced with the prince's own label, and three ostrich feathers. The shields charged with the feathers were introduced into the monument in accordance with the express provisions of the prince's will: the three feathers themselves are golden, and are set separately upon a sable field. This bearing may be considered as a second "coat of arms" adopted by the prince, and as such, it does not form any exception to the rule for the use of the shield.

I may here observe that there exists no authority whatever for the popular legend which derives the three ostrich feathers grouped within a coronet, the distinctive cognizance of the princes of Wales, from the Black Prince, and which asserts that this device was first assumed by him as a trophy and a memorial of Cressi. It is true that the blind old king of Bohemia fell on that day; but it is certainly not more than *probable* that the ostrich feathers afterwards borne by the Black Prince, were emblazoned on the banner of the ill-fated old king, and thence adopted by the victor. The German mottoes borne by the Black Prince with the three feathers, support such a *probable* origin for the cognizance itself; it is also singular that an ostrich was the badge of Anne of Bohemia (grand-daughter of the blind king who died at Cressi), the queen of Richard II. (himself son of the Black Prince), as is apparent in the decorations of the monumental effigy of this royal lady in Westminster Abbey.

The brass to Sir Symon de Felbrigge, K.G. Banner-bearer to King Richard II. (A.D. 1416) affords an example of the introduction of a royal badge upon a shield.* The badge is the shackle and fetter-lock. Besides these two badge-bearing shields and the royal banner, which rests on the knight's arm (an unique example), there are several other shields and heraldic devices of the utmost interest included in the composition of this brass.*

The shield of arms, and more especially in its earliest simple elongated form, always adds greatly to the effect of those architectural members with which it is associated; and this telling effect is due as well to the admirable skill with which the early Gothic architects and masons introduced heraldic shields, as to the inherent effectiveness of the shields themselves. Sometimes the heraldic shields appear as if suspended from their guiges (shield-belts) from the crockets of canopies (as in the brass to Alianore de Bohun, in Westminster Abbey; and in those to Sir Symon de Felbrigge; to Alice de Bryan, at Acton, in Suffolk; and to Lady Tiptoft, at Enfield); or they hang from pateræ which stud a group of mouldings forming a string, or from knots of foliage, after such a manner as to occupy the central area of spandrils; or, in other instances, the guige is passed over small bosses or hooks, introduced for that particular purpose; and then, again, they frequently rest upon the cusping of a spandril, of a panel, or of a three or four foil, or multifoil; or they are placed independently in relief, in similar positions. The deeply interesting architectural tombs of Edward III.; Philippa, his Queen; Eleanor, Queen of Edward I.; of Aymer de Valence; of Edmund Cronchback; of William de Valence; and of John of Eltham; with several others in Westminster Abbey, abound in the very finest examples of all these usages. And the grand series of shields of arms which, in diminished numbers, have survived the ruthless attacks both of wanton destroyers and of time, in the aisles of the choir and nave of the same venerable church, may be studied with the utmost advantage as examples of *architectural heraldry*. They are, indeed, to be numbered among the most precious relics of their class which Gothic art has left for the admiration and instruction of students. These shields are admirable in form; the artistic composition and execution of their charges, are equally worthy of the highest praise: and, they are alike excellent as examples of heraldry of the highest order, and also as illustrations of "heraldry in its connection with architecture." These shields are specially remarkable from the manner in which they are introduced into the architectural composition of the aisle-arcading: they are apparently suspended from *two* guiges, of which one passes over a corbel-head on either side of each shield. (Actual shields were in reality thus suspended by the guige.)

There is one form of introducing heraldic shields into their compositions, in favour with the architects of the closing years of the fourteenth century, and with their successors, which I cannot describe in terms of approbation: I refer to the representations of angelic figures holding shields of arms. However graceful in themselves these figures may chance to be, this duty of heraldic supporters (commonly discharged by some of the animal creation), is altogether inconsistent and derogatory for such forms as we assign to these celestial ministers. Figures of angels may very feliciously be placed, as in positions of watchful tending on their brethren of our race, and more especially in our seasons of extreme trial; but proper feeling must rescue them from every servile office, and from every unworthy association,—from every office, and from every association, at all at variance with our ideas of the angels, and of their mission as connected with ourselves.

The most beautiful examples of such angelic figures grouped with heraldic shields (the angels are here rather guarding the shields than supporting them), are those which fill the cusped circles of the spandrils of the great entrance-doorway (or porch) of Westminster Hall.

* See Rev. C. Boutell's "Monumental Brasses of England," in which work this fine brass is figured.

* A description of the tomb of Lord Bourchier, banner-bearer to Henry V. in Westminster Abbey, was here introduced, together with notices of numerous shields and other examples of heraldic insignia in the same abbey church, and in the cathedrals of Gloucester, Chichester, Hereford, York, Canterbury, and Lincoln. The shields upon the tomb of Eleanor, queen of Edward I. in Westminster Abbey, as also upon her memorial cross at Waltham, were referred to as the earliest known examples of *quartered* arms in architectural heraldry.

The abbey church of St. Alban supplies us with a characteristic example of a shield *held* by an angelic figure:—the shield bears the arms of one of the greatest of the forty, who in succession presided over the abbey of the British protomartyr, Abbot John de Wheathamstede.

The shields which appear in architecture before the close of the fourteenth century, bear witness to the high artistic powers of the men by whom they were produced. The plain surfaces both of the simple ordinaries of arms and of the field in their armorial compositions, are, in very many of these shields, richly diapered with various patterns; and upon a field of such rich and varied diaper, the devices with which the shields are charged are worked in bold relief. Animal forms thus attain to a truly wonderful degree of effectiveness. The cusping-spandrils of the main arch in the canopy of the justly celebrated "Percy Shrine" at Beverley Minster (of which we may congratulate ourselves on possessing casts in the Architectural Museum), have each a shield of arms, which yields in excellence to no other examples of architectural heraldry in existence. The singular beauty of the diapers, and the undercutting which causes the several devices almost to stand to the front of their respective shields, are but imperfectly rendered in these casts, though they are casts of unusual merit. In the originals, the lions, in the royal shield, appear as in the very act of leaping forth with characteristic bounds; while the fleurs-de-lys may be best described as lilies waiting to be gathered. The expression of the lions is also admirable; and it is varied, with the utmost skill, in each individual animal; and these animals are drawn almost to heraldic perfection: they may, perhaps, be a little too much conventionalized, they may have a little too much of the weasel in their proportions, and in their general contour there may be, in a slight degree, too little of the true "Felis Leo" of the veritable lion of Gordon Cumming and the naturalists; but they are first-rate heraldic lions for all that; and this never will be said even of a very fac-simile of the king of beasts, if it be placed upon a shield as an armorial ensign. And so, in like manner, in the case of the other figures. The fleurs-de-lys in the Beverley shield are eminently beautiful; indeed, this elegant device is rarely otherwise, but more rarely still is it *so* beautiful as here.

Each of these shields rests upon an armed figure, which reposes within the cusping: these figures, which, with the other details of this really extraordinary canopy, remain in a condition of almost untouched freshness and perfectness, afford various illustrations of armour of the utmost interest and value, and are themselves sculptured with combined delicacy and vigour.*

SLIPS OF LONDON'S HISTORY.

BLACKFRIARS AND WHITEFRIARS.

Last week Sir Francis Graham Moon, the Lord Mayor, entertained right pleasantly at the Mansion House the "Noviomagians" (an antiquarian and social club, of which our readers have heard something before now), and invited the office-bearers of the Society of Antiquaries and others to meet them. There were Mr. J. Y. Akerman, Mr. Anderton, Mr. Bennoch, Mr. Butterworth, Mr. Alderman Carter, Mr. G. R. Corner, Mr Durham,† Mr. Godwin, Mr. Edward Hawkins, Mr. S. C. Hall, Mr. Charles Hill, the Rev. Joseph Hunter, Mr. Edward D'Anson, Mr. Robert Lemon, Mr. Lott, the Rev. Edward Moon, Mr William Moseley, Mr. Ouvry, Mr. Parry, Mr. Henry Stevens, of Vermont, Mr. Stevenson, Mr. William Tite, M.P. Mr. W. Wansey, Mr. Alderman Wire, and several besides.

To maintain the ordinary character of the club-meetings, some short papers were read after dinner, including one by Mr. Lemon (of the State Paper Office), which is sufficiently curious to lead us to make the foregoing note, and to print the paper entire.

Distinguished as our host has been in his presidency of the first city of modern times, it occurred to me that a note of the abodes of some few of the celebrated personages who passed their lives in quietude and retirement in those parts of London where commercial activity now reigns paramount, would not be unacceptable.

The migration of the citizens westward is a very curious and interesting problem, which I hope some day to see fully worked out by abler hands than mine. Within the compass of two centuries, a race of men have wholly disappeared from the City as inhabitants. In the fifteenth and sixteenth centuries, numbers of the nobility and gentry possessed houses and estates in the City, in which they permanently dwelt—not for the purposes of traffic or commerce, but as independent gentlemen residing in the pleasantest localities they could select. While on the one side the Tower was a royal residence, and on the other, Bridewell was a favourite resort of royalty, and the gorgeous tilts and tournaments of Smithfield were pageants of the utmost attraction, it cannot be wondered at that spots in Cheapside and Cornhill, in the fair lanes leading to the river, and on the banks of the river itself, were eagerly sought for by the followers of the court and the votaries of pleasure.

In arranging the noble collection of State archives under my charge, I have occasionally made a note of the residences of some of the most celebrated characters of the Elizabethan period, and I confine myself to the notice of a few only on the present occasion. Previous to Elizabeth I find that,

In 1548, John Lisle, Earl of Warwick, afterwards Duke of Northumberland, resided in Ely-place, and at the same time Sir Anthony St. Leger, Lord Deputy of Ireland, had his abode in Southwark, at Chamberlain's-wharf in Tooley-street, formerly called from him "St. Leger's-wharf."

In 1549, Sir Edward Wootton had a house in Warwick-lane.

In 1552, Sir Philip Hoby, at the Tower.

In 1556, Sir Roger Cholmeley lived in the Old Bailey; and in 1558, Sir Francis Englefield, then Secretary of State, rusticated in the pleasant paths of Whitefriars.

Coming now to the time of Elizabeth, in the first year of her reign, John de Vere, Earl of Oxford, resided at London Stone itself, so of course he must have been a thorough Londoner.

In 1559, Frances, the celebrated Duchess of Suffolk, lived at the Charter-house.

In 1567, Richard Bertie, ancestor of the Earls of Lindsey, lived in elegant style on his estates in the Minories and the Barbican; and in 1568, the learned John Jewell, Bishop of Salisbury, resided in St. Lawrence-lane. I doubt if the smallest bishop that now exists, even Sodor and Man, would voluntarily prefer living in that locality.

In 1570, Sir Thomas Gresham had Gresham-house, and there very properly, as a citizen, he carried on his immense mercantile transactions, as well as his diplomatic agencies.

In 1571, Lady Eleanor Pelham is found in the Minories; Sir Ralph Sadleir, the ambassador, in Howard-place; and Margaret, Countess of Lennox, the mother of Lord Darnley, at Islington and Hackney.

The Lord Chief Justic Catlyn, in 1572, was fashionable enough to take up his abode in St. Bartholomew's the Great; and in 1576, I find that Sir Walter Mildmay, the Chancellor of the Exchequer, was his next neighbour in the same place. In that same year, Lady Mary Sydney lived at St. Paul's-wharf, Sir Richard Baker in St. John's Zachary, Sir George Peckham at St. Sepulchre's, and Dame Elizabeth Leigh at St. Olave's Jury.

In 1579, a serious affray took place in Fleet-street, between Mr. Edmond Wyndham and Lord Rich, when Wyndham, being nearly overpowered by his assailants, found refuge in the house of the French ambassador, in Salisbury-court.

I will not trouble you with more details of this nature, but proceed at once to read a document singularly illustrative of them, and highly important as to the jurisdiction of the City in relation to the curious localities of the Black and the White Friars. It appears to be a claim made by the resident inhabitants there, for a confirmation or grant of exclusive privileges, and to relieve themselves from the troublesome interference of the Lord Mayor and his officers, whose presence, no doubt, was on many occasions personally inconvenient. The document is as follows:—

> A Note of Liberties as the Inhabitantes of the late dissolved Houses of the Blacke and White Friers do claime to have exempte from the Cittie of London:—

Inprimis.—To be free from all arrestes to be made within the precinctes of the said howses by the maiour or anie officers of the said Cittie.

Item.—No searche to be made within the said precinctes, but by the cunstables, with the assistance of the inhabitantes of the same, at the commandement of the justices of the peace, to be appointed by speciall commission for the same.

Item.—That all artifficers and craftesmen whatsoever (althoughe theie be no freemen of the Cittie) lawfullie to exercise theire trades, misteries, and occupations, without controllment of the maior or other officers of the Cittie.

Item.—To be free from all tenthes and 15ths to be granted as well to the Queene's Matie and of all other tenthes, 15ths, taxes, tallages, coates, and other burthens whatsoever, to be imposed uppon them by the Cittie as hitherto hathe bin accustomed.

Item.—To be free from watches, wardes, juries of enquiries, and others, to be charged within the Cittie.

Item.—To be free from all offices, lawes, statutes, custommes, and ordinances of the Cittie.

> A Declaration of such interest as Her Highnes hathe in the said precinct, with the casualties herunto belonging, together with a petition for the well government of the same:—

Inprymis.—Her Highnes hathe all landes and goodes of traitours and fellons, &c.

Item.—All waifes, straies, escheates, bloodeshedes, fines, amercementes, and casualties whatsoever.

Item.—Authoritie to appointe justices of the peace, bailifes, constables, and other officers within the said precinctes.

And therefore.—Wee, whose names are subscrybed, beinge resiante within the said precinctes, moost humblie beseech Her Matie that it wold please Her Highnes to appointe commissioners of the peace, not only for the preservation of Her Majestie's said interest, but also for the good governement of the said precinctes.

The names of all such persons, as well honorable as worshipfull, inhabiting within the said precinctes, or neere adjoyninge to the same, of which it maie please Her Highnes to make choice of commissioners.

INHABITING WITHIN THE PRECINCTS.

Inprimis — The Earl of Lincoln, L. Admirall of England.	Sir Wm. Morgan.
The Bishop of Wigorne.	Tho. Gorge.
The Lord Cobham.	Charles Morrison.
The Lord Cheynie.	William Moore.
The Lord Lawarr.	Thomas Browne.
The Lord Russell.	Roger Alforde.
The Lord Clinton.	Henry Knoles, senr.
Sir Ambrose Jermyn.	George Haies.
Sir Nicholas Poynes.	Robert Croswell.
Sir Tho. Gerrarde.	Vincent Skinner.
	Frances Kempe.
	Anthony Kempe.

ADJOININGE TO THE SAIDE PRECINCTE.

The Lord Buckhurst.	The Master of the Rolles.
The Lord Chief Justice of England.	The Queene's Sollicitour.
The Lord Chief Justice of the Common Pleas.	Mr. Tho. Fanshawe.
	Peter Osborne.
	Mr. Powle, of the Chancery.

Item.—In eclesiasticall jurisdiction to be subject to the Ordenary of the Diocesse, as we are alreadie annexed to the same by Acte of Parliamente.

Memd.—That the Lord Steward hathe bothe claymed and exercised jurisdiction within the said precinctes in Her Ma^tes^ right.

The order of the presente governement nowe used in the Blacke Friers.

Firste.—Theie have a churche and churcheyarde, founde of benevolence.

Item.—A preacher there maintained by the benevolence of the inhabitantes, whoe every Sonday and holliday preachethe in the said churche, saiethe Divine Service, and every first Sunday in the monethe ministerethe the Communyon.

Item.—A house prepared, also of benevolence, for his habitation.

Item.—The gates of the said precincte are shutt every eveninge, and opened againe in the morninge, and a porter maintained for that purpose.

Item.—A scavenger for the cleane keepinge of the streates.

Item.—The bridges at the Thames and Brydewell ordenarylie kepte.

Item.—A conducte of water for the inhabitantes maintcyned within the saide precincte; whereby theie are not forced to go into the Cyttie for anie water.

* To be continued.

† I fine first of the Queen wearing a mural crown; by this settler, all was exhibited

Item.—Lanterne and light orderly kept, as in the Citye.

Item.—If any house be infected of the plague, the doore is shut up, and a bill set over the same, and a collection made for the sustentation of the infected house.

Item.—A collection monethlie made for the reliefe of the poore, at every communyon.

Item.—If any incontinent person be taken, he or she is punished by carte, and sent to Brydewell, and presented to the ordenary by the churchwardens.

Item.—If anie be disordered, the cunstable seethe him to be corrected; which cunstable is sworn and appoynted by the justices of the verge.

Item.—All victualers are bounde before the justices of the verge for there good order.

(Signed) T. Cobham.
Henry Cheyney.
Anthony Kempe.
Thomas Browne.
Willm. Moore.

Touchinge Ordinances for the Whitefriers.

The inhabytantes there, since the death of the late steward, and the determynation of the commission of the justices of the peace appoynted by him for the governement of the same, duringe which time theie were well governed, beinge often empeached by the maior and other officers of the city, have not of late bin willinge to make suche contribution as were necessarie for the good order of the same. But uppon the determination for the quiet enjoyenge of the libertie, theie will take order as followethe:—

Inprimis; for theire churche, havinge none and beinge for the smale nomber not able to build any, the precincte beinge annexed to the diocese of London, theie will all be bounde to Paules Churche, and there to frequent service and to communycate as the lawes requier.

Item.—Theire gates shalbe orderly shutt and opened at convenient times, and porters appointed for the same.

Also, a scavenger to keepe the precincte cleane.

Item.—Tipling howses shalbe bound for good order.

Item.—Searches to be made by the cunstables with the assistance of the inhabitantes at the commandemente of the justices.

Item.—Rogues and vagabondes, and other disturbers of the public peace, shalbe corrected and punished by the authoretie of the justices.

Item.—A bailife to be appointed for leavienge of suche duties and profittes which apperteine unto Her Matie.; as also for returne of proces for execution of justice.

Item.—Incontinent persons to be presented unto the Ordenary, to be tried and punished.

Item.—The poore within the precincte shalbe provyded for by the inhabitantes of the same.

Item.—In tyme of plague, good order shalbe taken for the restrainte of the same.

Item.—Lanterne and light to be mainteined duringe winter time.

(Signed) Willm. Lawar.
Charles Morison.
Geor. Puttenham.
Tho. Gorges.
Fran. Alford.

There is no date to this curious and interesting paper, but from the signatures attached to it, and the appearance of the handwriting, it must have been as nearly as possible about the middle of the reign of Queen Elizabeth, or about the year 1581. What immediate effect this memorial had does not appear; but it is quite certain that both the precincts of the Black and White Friars enjoyed exclusive, and even dangerous privileges, for nearly two centuries afterwards. According to Maitland, the inhabitants of the Black Friars not imagined, but exercised, a right, independent of the jurisdiction of the City of London, until the year 1735, when it was terminated by an action brought by the City in the Court of King's Bench, and the jury returned a verdict in favour of the City. The exclusive privileges of the White Friars precinct grew to be so dangerous, that they were determined by Act of Parliament in 1696.

It seemed to me this slight but authentic notice of a curious little republic—an *imperium in imperio*—might be interesting as a scene of bygone time, and might even lead us to regret that such scenes were gone for ever. What delight it might be, even now, if a portion of the citizens could enjoy such a pleasant retreat, free from troublesome lord mayors and their more troublesome officers, to have their own exclusive pump, to light up their own lanterns, to dwell where incontinent persons dare not show their naughty wicked heads, or to indulge in the excitement of a cart exhibition, if any such were unwise or unlucky enough to be caught. But all our pleasures are gradually disappearing before the march of reform and the flight of the rail. Hanging is difficult, and even unfashionable.

I will not detain you any longer. The state of society here indicated continued in London throughout the reign of James I.

How the glorious fire of London broke out, and how, thereupon, everybody that could migrated westward; and how streets arose and markets were planned; and how the Lord Mayor opposed all the buildings he could; and how, by main force, he demolished the stairs at the New Hungerford Market; and how he got a sharp rap of the knuckles from the Privy Council for so doing; and how he was obliged to submit, and build them up again:—behold, it is all written in manuscript, in a very large book, from which, some day or other, if I ever have an opportunity, I shall make it more at large appear unto your lordship.

SOME ACCOUNT OF CREWE HALL AND NANTWICH.*

Nantwich is the beau ideal of a peaceful, quiet old English town, carrying the mind back to that golden age when as yet spinning-jennies were not, when the whistle of steam and the roar of the locomotive had never been heard. Its streets are narrow and somewhat tortuous, but clean and well kept. Many of the houses are half-timbered black and white, some with considerable pretence in their architecture. This seems to have been a distinguishing feature of Nantwich in times of old. Master William Webb, in his "Itinerary," written in the reign of James I. thus discourseth thereon: "Whatsoever hath been the causes, or howsoever the inhabitants there have had their invancement, sure I am, there can hardly be found a town merely uplandish as we term it, neither traded unto by waters, nor enriched by any special trades or manufactures, that hath such a knot of wealthy and landed men in so small a compass. . . . . The buildings within the same town are very fair and neat, and every street adorned with some special mansions of gentlemen of good worth; the middle and principal parts of the town being all new buildings, by reason of a lamentable fire which happened there in the year 1583, that consumed in one night all the dwellings from the river side to the other side of the church."

Another beauty of Nantwich is thus alluded to by Master Webb: "It may not seem amiss, though I reckon it not as a note of antiquity, yet (out of my love) to note one lustre of this town; that into the five entrances into the same, which way soever you come, your eye is entertained with a fair, gentlemanly house at the end or entry of the first street every way." There are other towns which might be mentioned in which a similar "lustre" at the principal entrances would be a very desirable acquisition.

The origin and meaning of the name "Nantwich" are obscure, and have given rise to considerable discussion. The good people of the locality find no difficulty in settling the question. Wich, according to their interpretation, signifies, in Saxon, a salt-work, and Nant, in Welsh, a brook or valley. Nantwich is, therefore, the salt-work on the brook, which correctly gives its designation. This etymology is the exact counterpart of the famous one in the "Antiquary," which led to such a keen contention between Jonathan Oldbuck and Sir Arthur Wardour. To say nothing of the absurdity of deriving each syllable from a separate language, we cannot find, after the most diligent research, that *wich* means a salt-work, or has any connection with salt, either in Latin, Welsh, Anglo-Saxon, German, or English. As to the prefix, *nant*, it is of comparatively modern application. Even in the seventeenth century, the town is said to be vulgarly called Nantwich; but in ancient deeds and other writings, Wicus Malbanus, or Wich Malbank.

The true history of the name, so far as it can be ascertained, appears to be as follows. The manufacture of salt in the locality dates from a very remote origin, and there is little doubt was carried on before the arrival of the Romans. By the ancient Britons it was called "Hellath Wen," or the white pit, from the whiteness of the salt made here.

That the Romans formed settlements here is sufficiently proved by the remains of their roads, and other constructions. Amongst the Romans a small collection of houses was called "Vicus," which has been perpetuated in the Saxon termination Wick, or Wich, so common in various parts of the country. The presence of the salt having been the cause of the Roman settlements originally, and of their preservation under the Saxon dominion, seems sufficiently to account for the curious fact that all, or nearly all the places where brine-pits are found, have the suffix "Wich" attached to their names. At the time of the Domesday Survey, the town bore the simple appellation of "Wich." "Erat in Warmundestron hundred unum Wich, in quo erat putens ad salem faciendum. Modo tenet eundem Wich, Willielmus Malbedeng de comite, cum omnibus consuetudinibus ibidem pertinentibus." From this family of Malbedeng, or Malbank, the town received the name of Wich Malbank, which it retained many hundred years. When the present name of Nantwich obtained currency, or how it arose, does not appear. It may possibly be a corruption of Malbank Wich, softened into Bank Wich, but of this each will judge for himself.

Though long the most considerable town in the county next to Chester, Nantwich does not seem to have sustained many vicissitudes. The great fire of 1583 has already been alluded to. "In the year of grace 1617, the British Solomon, James I. vouchsafed," according to Master Webb, "to make this town the lodging-place for his royal person; and after he had for some hours accommodated himself in the house—then his royal court—it pleased him to walk so far as the brine-seth, and with his eye to behold the manner of the well, and to observe the labours of the briners. And after his majesty's gracious inquiry among the poor drawers, of many things touching the nature of the same brine, and how they proceeded to convert it into salt, most princely rewarding them with his own hand, his majesty returned to the court."

The peaceful tranquillity of Nantwich was rudely interrupted during the time of the civil wars, the contending parties having made it an arena of strife. It was taken and retaken several times, but held out stoutly for the Parliament. One Captain Sandford, a truculent cavalier, addressed a letter of summons to the garrison, in which he says, "You see my battery is fixed, from which fire shall eternally visit you day and night, to the terror of your old and females, and the consumption of your thatched houses. Believe me, gentlemen, I have laid by my former delays, and am now resolved to batter, burn, and storm you." Alas, for big words and sounding threats! a few days afterwards, the sturdy roundheads of Nantwich resisted and repulsed the threatened attack, and the redoubtable Captain Sandford was laid low.

During the last two centuries, Nantwich has pursued the even tenor of its way, without much vicissitude or incident. The salt manufacture has dwindled down to a mere trifle, but the town, nevertheless, shows no symptoms of poverty or decay. It is placed in the midst of a fertile district, overflowing with milk and butter, and especially rejoicing in cheese, for which the locality has been famous from time immemorial.

Besides the half-timbered houses already mentioned, there are a few objects of interest which may be briefly alluded to. In the churchyard stands an ancient timber building, now a free school, but originally the common hall of the freemen of the guild. The projecting two-storied porch, a fine specimen of half-timber construction, bears the date of 1611.

The sessions house, situated in the market-place, built over an open arcaded space, occupied as a market-house, was erected in 1720, by King George II. then Earl of Chester. It presents nothing worthy of remark.

There are several sets of almshouses, situated

* See p. 506, *ante*.

near the principal entrances to the town, some of which, erected in the seventeenth century, are worthy of examination for their design and arrangement.

The main architectural ornament of Nantwich is its venerable church, a noble specimen of the ecclesiastical architecture of the fourteenth century. Historically, it appears to have been originally a chapelry under the parish church of Acton, belonging to the Abbey of Combermere, and it is doubtless to this connection that the architectural beauty of the church is owing. Since the year 1677 it has ranked as a parish church. The building is in plan a Latin cross, being the only church of this form in Cheshire, except Chester Cathedral. The nave has four bays, with clerestory and aisles; the chancel three bays; and the transepts three bays, each without aisles. The dimensions are spacious, being 170 feet in length, and 120 feet across the transepts. The principal parts of the structure, most of the windows of the side aisles, the chancel, and the north transept, are of early fourteenth century work: many of the windows have tracery heads of beautiful flowing designs. The east and west windows, and the south transept, are of the fifteenth century, or Perpendicular work, of large dimensions, and well-executed designs. The west window, in particular, has nine lights, and is extremely elaborate. The chancel is very richly ornamented: the buttresses are very bold, with double pinnacles and gargoyles, and the remains of a rich open-work crenellated battlement. The east window has had a fine open-work canopy rising above the battlement of the roof. A small vestry, harmonizing beautifully with the architecture of the church, is projected from the north-east corner of the chancel. A porch, in two stories, projects from the south-western corner.

The clerestory of the nave is of late Pointed design.

The tower rises from four bold piers at the intersection of the cross. Immediately above the roof it takes the octagonal form, the angles being cut off by squinches, and broached up into the plinth of the octagon. The octagonal portion has one window in each face, except the northern one, which is occupied by a stair turret. A buttress is carried up at each angle, finished with crocketted pinnacles. The summit finishes with a crenellated battlement. The tower rises about 100 feet above the soil. Its architecture is in a *later* style than the body of the church, probably after the middle of the fourteenth century.

Internally the nave and transepts are finished comparatively plain. The chancel is very elaborate. The ceiling is vaulted with stone of a complicated pattern, almost approaching fan groining, springing from attached columns in the walls. The capitals and the bosses at the intersections are richly carved. There are richly carved sedilia and a piscina on the south side, and a priest's door under the middle window, of beautiful design.

The chancel is fitted up with oak stalls and tabernacle work. There is a tradition that this work was brought from Combermere Abbey, but its appearance does not justify the statement. It has evidently been prepared for, and fitted to, the place which it now occupies. The workmanship and design are good, but many parts appear never to have been completed.

Attached to the north-east central pier there is a stone pulpit and stair of elaborate panelling, but of late date. A stone balustrade across the chancel archway of similar design seems to have formed the base of the wood rood-screen now destroyed.

The present state of the building is most deplorable. Having been erected, like most of the Cheshire churches, with the friable sandstone of the district, the exterior is frayed by the weather to a lamentable degree. Many of the pinnacles are gone; the rich carved work an undistinguishable mass; the battlements dilapidated, and the tracery scarcely able to hang together. An attempt was made some years ago to restore the south-western angle of the nave, but the work is coarse, and incompatible with the original construction. The interior, though not so much dilapidated, presents an unsightly conglomeration of galleries, partitions, pews, and staircases, in which neglect and disorder are the most prominent features. Above the southern porch is a vaulted chamber containing a library of books, principally the Christian fathers, many of rare and valuable editions. These are allowed to rot and mildew without the slightest care or attention. It is stated, however, that a vigorous attempt is about to be made to clear and renovate the interior, and to restore the exterior to its original beauty. The worthy rector, the Rev. Mr. Cheator, is, we understand, earnestly enforcing the matter upon the Christian liberality of the county, and we heartily wish success to his efforts.*

There are one or two points connected with the proposed restoration which are open to controversy. The gentleman who has been professionally consulted on the subject is probably the highest authority to whom application could have been made, and it is with considerable diffidence that we offer an opinion; but, if we have been rightly informed, a principle has been enunciated in reference to this restoration, which, if acted upon, would, as we think, be fraught with the most disastrous effects to the ancient architecture of this country.

The prevalent style of the architecture of the church, as already stated, is early fourteenth century, or what is usually termed Flowing Decorated. It is proposed, we understand, that the whole of the building shall be restored in conformity with this style, that the clerestory of the nave shall be removed or remodelled, and that the magnificent fifteenth-century west, east, and south transept windows shall be demolished and superseded by new designs of flowing tracery. Against this proposition we beg to enter our earnest protest, and call upon the lovers of ancient English art, and on all who are imbued with the true antiquarian spirit to join us in so doing. What is it which constitutes the value of our ancient architectural remains? Not their mere æsthetical beauty, though that may be great; not the excellence of their workmanship and the mathematical skill displayed in their construction, though these are well worthy of study: it is, as already stated, the history of mind and progress which they display,—it is that they bear upon every line the impress of the age which produced them,—that they are actual and tangible portions of the history of our country: they are part and parcel of that dear old England which we all so much love,—all the better, perhaps, for a few inconsistencies and defects. This charm once broken, the glory is departed, and nothing remains but the mere question of taste and convenience, too feeble, except in special instances, to produce any glow of enthusiasm or affection. But it may be said, why not remove inconsistencies and interpolations, and restore a building to its pristine beauty, in accordance with the ideas and intentions of its original designers?

The question is a wide one, but admits, we think, of a very simple reply. What is meant by restoring a building? Is it not simply the act of taking out the decayed and injured portions, and replacing them by parts identical in design with what they were before? In regard to mediæval structures, the idea of restoration generally includes the removal of any renaissance or pseudo-classical excrescences which may interfere with its unity as a whole. On this principle the extensive restorations which have been in progress in France for some years have been conducted, and with excellent effect. Anything which goes beyond this may be improvement, but certainly is not restoration. Suppose, in the case of the church before us, the building had been constructed with materials comparatively imperishable, would the idea have been entertained for a moment, of destroying any genuine mediæval part of the structure because of any fancied inconsistency in the style? If such a principle could be established, what havoc would be made in our noble cathedrals, which are for the most part histories of the progressive changes from the heaviest Norman to the most delicate fifteenth century work. What difficulties also would exist in the way of substitutions. In the present case, if the large perpendicular windows are destroyed, who is to be the judge of what would have been the design if erected at the time of the remainder? There is no end to the confusion and uncertainty of such a procedure, which would produce a result both false to history and unsatisfactory to the lovers of ancient art. We sincerely trust that such barbarous interference and mangling of our ancient specimens will never be permitted.

J. A. Picton.

* This church is beautifully illustrated in Bowman and Crowther's magnificent work on Gothic architecture, recently published.

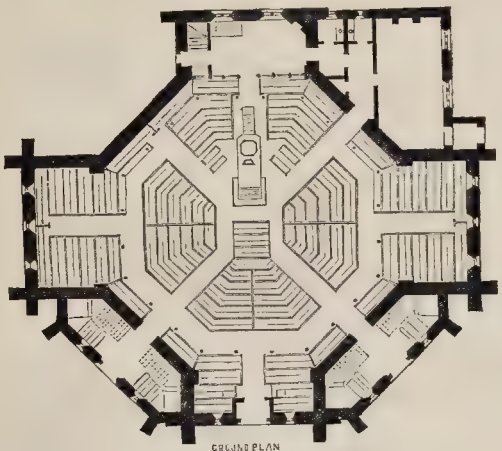
CANONBURY CHAPEL, ST. PAUL'S-ROAD, ISLINGTON.

In our last number (p. 516) we gave some particulars of a chapel which has been commenced in Islington, for the Evangelical Nonconformists, by Rowland and Evans, from the designs of Messrs. Habershon. The building has been undertaken by the London Congregational Chapel Building Society, in connection with a local committee; and it is situate in a neighbourhood said to be much in want of accommodation for religious worship.

The committee state, that "the large and rapidly-increasing district of Islington has a population of about 110,000, with church and chapel accommodation for less than 30,000; that is, for little more than one-fourth of the population. That the present number of inhabitants is about twice as great as it was fifteen years ago, and, during that period, very little has been done by all religious bodies for providing increased accommodation for public worship. Only one additional chapel has been erected by the Congregationalists for an additional population of about 55,000 persons."

We may add to our former memoranda, that the height of the building to the apex of gables is 57 feet; the interior height to lantern, 60 feet: the span of the roof is 66 feet. There will be transverse arches at the four transepts, and three large windows and eight clerestory windows. The fittings will be deal, stained. The contract for building and fittings is 3,500*l*. The clerk of the works is Mr. Houghton; the honorary secretary, Mr. T. A. Burr.

CHURCH-BUILDING NEWS.



Lincoln.—The chief stone of the cemetery chapels was laid on 20th ult. The architect is Mr. M. Drury, and the builder, Mr. W. Huddlestone.

Sudbury.—The reopening of St. Peter's Church, Sudbury, after a restoration, in which the substitution of free chairs for boxed pews presents the chief feature, took place on Tuesday week. The nave, and a considerable part of the aisles, have been furnished with chairs of a light and inexpensive kind, and benches, of a skeleton character, have been placed against the outer walls. The east end of the chancel has been treated with colour on the walls around the window, with a painted reredos beneath it, and a stained glass window of five lights, representing the four major prophets and the four evangelists in the outer lights, with the Nativity of our Lord and an enthroned figure of Him in the centre light, supported by the other eight figures; the gift of Mr. E. Stedman. The organ occupies one of the chancel aisles, and the chancel itself is fitted with choir-stalls of wainscot, agreeing with the old remains. Some colour has been restored on the ceilings and throughout the nave and chancel; and the old font has been in part relieved with gold and colour. The west entrance of the church has been brought into use, and an internal screen, with doors, formed to protect it from the market-place, upon which the church abuts. The funds for the restoration have been provided by subscriptions from the town. Mr. Butterfield was the architect employed.

Aylesbury.—A second painted window, the gift of Mr. Z. D. Hunt, has been placed in the north chancel of the parish church here. The centre figure represents St. John the Baptist, with lamb, cross, and motto. The artist was Mr. J. G. Waller. The new window now being erected in the chancel will shortly be completed: it will also be of painted glass.

Southampton.—The foundation-stone of the new district church of Christ Church, Northam, was laid on Monday before last. The church is to be built by Mr. Joseph Bull, and will be

CANONBURY CHAPEL, ISLINGTON.—Messrs. Habershon, Architects.

capable of seating about 500 persons.—The consecration of the new church of St. John the Evangelist, Rownhams, took place on Thursday before last. The church is situated opposite one of the entrance-gates of Rownhams, in the centre of an extensive piece of ground, presented by Mr. Chamberlayne, and owes its origin, as the *Hampshire Advertiser* states, to the late Major Colt, who bequeathed a large sum for its erection, as well as for the parsonage-house and schools. Some subscriptions have been added to the building fund. Mrs. Colt has invested 2,000*l.* for the endowment. The church is quite finished, and the house and schools nearly so. The church is in the Decorated Gothic style of the middle period: it consists of nave, transept, and chancel, with tower and spire. The exterior of the walls is Plymouth whinstone, relieved with Caen dressing, of which latter the spire is built. The interior open Gothic arched roof is of grained oak; the open pews also of oak. The side windows are all of stained glass, containing many old medallions, consisting of designs from Scripture history in the Mediæval style, worked up with modern glass, by Mr. Ward, of London. The east and west windows are plain at present. The chancel is raised. The pavement of the centre of the aisle is tesselated, and the remainder of the floor is in encaustic tiles. The front of the carved communion-table is of Maltese stone, sent as a present. The architect is an amateur, the Rev. Mr. Grey; the builder, Mr. Pedley. The edifice is heated with hot air. The parsonage-house and school-house, and schools, are of deep red brick, in the Gothic manner. The grounds, which are several acres in extent, are being laid out.

Newport (*Wales*).—The restoration of St. Woollos Church, Newport, has just been completed. Its chief peculiarity arises from the fact that the different portions of the buildings which form the present church, were executed at different periods of time. The portion between the tower and nave, now called St. Mary's, was the original fabric, erected, it is said, by St. Woollos. This appears from the nature and character of the masonry, and its disunion from that of the other portions which lie in contact with it. The present nave, which consists of an arcade for five arches on each side, was next added; and this was flanked, on each side, by Norman aisles. The corbel stones, which supported the roof, are still remaining in the south aisles. Clerestory windows were placed above the roof of the aisles, but these were subsequently diverted from their original

use, by being enclosed in loftier aisles of the Perpendicular style. The windows in these are of large dimensions. The chancel is of geometric date, with many details of interest. The tower was added about the same period as the aisle. The canopied figure is replaced without restoration: it is still doubtful whom it was intended to represent. The gallery in the north aisle has been removed: the west one, which contained the organ, has been taken away; and the rood-loft, which formerly occupied the east end of the house, has given place to a chancel aisle, the effect of which is to increase the apparent length of the church. The roof, which was formerly plastered, has been cased with boarding and rib work, with large carved bosses at the intersections. The old pews have been removed and others substituted. The floor is paved with red and black tiles, and the sacrarium contains a diapered pattern in encaustic tiles. The present church is calculated to seat upwards of five hundred persons, and its restoration has been effected at a cost of about 2,500*l.* The heating is by hot water, and the lighting by gas. The gas standards are of brass, and a corona is suspended from the chancel. The gas fittings were supplied by Mr. Middleton, of Newport. The architects were Messrs. W. G. and E. Habershon, of London and Newport; and the builders, Messrs. Edy, Basford, and Knight, of St. Neots. The staining and glazing were by Mr. James Sanders, of Pillgwenlly. The opening took place on Thursday in week before last. The restoration fund is still short of the requisite amount.

Anglesey.—The re-opening of Penmon Priory Church, Anglesey, took place on 19th ult. after being closed for nearly four years. The church has been restored, at a cost of about 1,180*l.* in accordance with plans prepared by Messrs. Weightman, Hadfield, and Goldie, of Sheffield, architects, and under the superintendence of Mr. T. Ellis, of Beaumaris. The principle adopted in renovating the fabric was, to restore it, as it had come down to this generation; and as the chancel was of the Decorated period, it was restored in that style,—the rest of the building, being Norman, in the Norman style. The chancel has had a new east window of three lights inserted instead of the old one of two lights, and six new windows in the north and south walls; copied from an old window. The walls have been only partially rebuilt. The roof over the old church is new, as well as the gable stones and crosses; and the entire floor of the nave, transepts, and tower, and the chancel aisle, have been laid with polished Yorkshire flagging. The space within the communion rails is floored with encaustic tiles, manufactured by Messrs. Maw and Co. Against the east wall are two tablets, containing the Commandments—painted in ancient letters, by Miss Owen, of Trefdraith; the joint gift of herself and sister. The chancel end of the church is occupied by open benches, all free: the rest of the church is unencumbered with seats, excepting some moveable benches. The corona, branches, and sconces, were furnished by Messrs. Hart, of London. The north transept, which had been levelled, has been rebuilt on the old foundation, discovered in excavating, and is separated off by a curtain, so as to form a vestry. A Norman window, the design of which has been borrowed from the arcades in the south transept, is placed in the east wall, and two plain semi-circular headed windows in the north gable. The arcades in the south transept have been cleaned and restored, and a Norman window occupies the east wall. This window, and the corresponding one in the north transept, have been filled with stained glass, taken out of the old east window of the chancel, and repaired by Mr. Evans, of Shrewsbury. On one of them St. Christopher is represented bearing Christ through a river, with a bishop standing by; on the other, St. Catherine, attended by a mitred bishop. The nave and tower have been repaired, and an old window in the former released from the coats of mortar which concealed a moulding surrounding the edge of the splay. The precincts of the church have been improved by the addition of a piece of ground to the graveyard, the gift of Sir Richard Bulkeley, Bart. There is still a deficiency of 200*l.* in the restoration fund.

Fillingham.—A memorial to the late Major Dalton, who fell at Inkermann, has been erected in the churchyard of Fillingham, by the tenantry of Mr. J. Dalton, of Fillingham Castle. It consists of a Gothic pillar, with square shaft, surmounted by crocketted pinnacle and cross, the pediment bearing the inscription. There is a disproportion between the pinnacle and the shaft, which gives the former a cumbersome appearance. The carving was by Mr. Keyworth, of Hull.

Ugthorpe.—The opening of St. Ann's Roman Catholic Church, at Ugthorpe, nine miles north of Whitby, took place on Thursday before last. The design was furnished by Messrs. Weightman, Hadfield, and Goldie, of Sheffield. Mr. Goldie superintended the work, and the plans were carried out by Mr William Falkingbridge, of Whitby, the contractor. The church is in the transition from the Early English to the decorated style of architecture, and consists of a nave and aisles, with tower at the west end of north aisle, the lower story of which forms a porch. The chancel and a large sacristy are to the north. The tower is formed of two stages, the upper one intended for bells, the lower containing the organ gallery, which opens into the nave by an arch. The nave is separated from the aisles by arcades, with pointed stone arches, carried upon circular shafts, with moulded capitals and bases. The aisles are lit by two-light windows, with simple tracery in the heads. The clerestory is lit by small trefoil windows, and a large four-light window of geometrical tracery occupies the western gable. The chancel has an eastern window, with tracery of a more ornate description, together with two small side windows, at the sills of which respectively are the sedilia and piscina. The altar and reredos are by Messrs. Lane and Lewis, of Birmingham, and are sculptured in Caen stone. The roofs throughout the church are of open timbers stained, the space between the rafter being coloured blue. The nave and aisles are seated with open seats. It is intended to fill the eastern and western windows with stained glass, to be furnished by Messrs. Hardman, of Birmingham. The walls of the edifice are lined with brick, so as to insure dryness. The total cost will be about 1,400*l.* The church is calculated to contain 500 persons.

BRONZE CASTING FOR THE COLOSSAL WASHINGTON MONUMENT.

The casting of the horse for the above monument at Munich is one of the great feats of modern foundry, as 15 tons of bronze had to be melted and kept in a state of fluidity. For several days and nights previously a large body of fire was working at these huge masses, which required to be stirred at times, to which they answered in a grumbling tone. Still, when the bronze was entirely liquified, an ultimate essay was made in a small trial cast, and for heightening the colour some more copper was even then added. Successively all the chambers through which the metal had to flow in the form were cleared of the coal with which they had been kept warm, and the master ultimately examined all the air spiracles and the issues of the metal; then the props of the different tubes were placed, and every man had his duty and place assigned to him. Finally, the master, amidst the intense expectation of the many art-amateurs present, pronounced the words, "In the name of God;" and then three mighty strokes opened the fiery gulf, out of which the glowing metal flew in a circuit to the large form. The sight was magnificent; and in the little sea of fire stood the master, and gave his commands about the successive opening of the props. Hot vapour poured forth from the air spiracles; in the conducts the metal boiled in waves; still, no decision yet, as the influx of the bronze in the very veins of the figure could be but slow. At once flaming showers jumped out of the air conducts, and the master proclaimed the cast to have *succeeded*. A loud cheer followed, when the master approached Mr. Crawford, the artist of the Washington monument, to congratulate him on this success. Another cheer was given to M. de Miller, the chief of the Royal Foundry of Munich, who had personally conducted the work.

FOREIGN INTELLIGENCE.

Austria.—Discovery of an Unknown Roman Town.—It has been known before, that there existed near the Saalfeld of Klagenfurth (Carinthia) the ruins of an ancient Roman town, whose name, however, has been hitherto doubtful. Still, many inscriptions and other documents make it probable that it is the ancient *Virunum*, which there lies before our eyes. In the forest of Tältschach the traces of houses are so distinct that one may wander from street to street, and the surrounding space is covered with the ruins of larger buildings. The Historical Society of Carinthia made excavations here last summer, when a large house was discovered, containing six rooms, but without windows, while the entrance was formed by a portico. The exterior of this building has some fresco paintings: the interior is deficient; leading to the belief that it has been the amphitheatre of this old Roman municipium.

Italy.—Censure of Stones.—The bronze tablet which had been erected in the church of Santa Croce, in Florence, to the memory of those who fell at Cortenone in defending Italian liberty, has been removed thence, and found an asylum in the Townhall of Turin, with the following inscription—a sample of modern lapidary style:—

I nomi di questi prodi,
Che la carità del natio luogo aven collocato ad onore
In Santa Croce di Firenze;
E non poterano durarvi per tristizia di tempi,
Il Municipio Torinese
In questi tavole conforme pianeuto accoglieva.
Addì, 9 Giugnio, 1855.

Rome.—The Papal Government is not entirely inactive in restoring some of the old buildings of its metropolis. The lower portion of the Pantheon, and especially that side which looks towards the Piazza della Minerva, has been freed of those little buildings which have been plastered to it during the Middle Ages. Those parts have been surrounded by an iron railing in the same way as was done around the Temple of Mars Ultor, which affords now an easy access to the lower parts of the above huge building.——At Benevento the Arch of Trajan has been cleared all around of the extraneous masonry and rubbish which hitherto disfigured that fine monument.

Rome.—Cornelius's last Cartoon.—As the works of this great artist are viewed successively by thousands, his personal occurrences also are reported throughout Europe. Cornelius has painted a portion of his cartoon "The Eve (*Ervcartung*) of the Last Judgment," at Aricia, near Rome, a place redundant of traditions and oldest history. The picture reaches now to the lower parts where the fathers and teachers of the Church form the connecting link between heaven and earth. The Saviour, whose figure in the "Last Judgment" of the Ludwigskirche, at Munich, is 12 feet, will have on this cartoon the colossal height of 16 feet. The last touches will be given to this picture when executed in *fresco*, when also the semicircle of the apsis of the Basilica will impart to the horizontal row of the blessed choirs a more lively configuration.

Cialine Peat.—M. C. J. Brocke, a chemist at Cologne, has made a new invention in the preparation of peat, to which he gives the above name. He says that Cialine peat can be made of most sorts of common peat, and that it will surpass every other fuel in the intensity of flame and heat. The experiments hitherto made in forges show that Cialine will produce a flame several feet long, while common peat will only give one 7 or 8 inches long.

Restoration of the Dom of Speyer.—The restoration of the western portion of the dome, which is carried on under the direction of building director Hübsch, in the pure Romanic style, proceeds successfully. The King of Prussia has undertaken the expense of rebuilding the two western steeples, the Austrian government pays for the construction of the entrance-hall and the lower portion of the principal front, and the upper part and the great circular window will be completed by the assistance of the Duke of Nassau,—a strange, but perhaps the only practicable way of completing those huge bequests of the Middle Ages. The Dom of Speyer is the largest building of Romanic style in the whole of Germany, its length being 450 feet, the width 120 feet, and

the height of the middle nave up to the top of the roof, 148 feet. Besides, its interior, wider in the middle nave than the Dom of Cologne, which has been of late adorned by fine fresco paintings, makes it a sight worthy of general admiration.

LATE WAGES—DRUNKEN WORKMEN.

Early closing has of late become an approved principle: it is practised by numerous large establishments (chiefly mercantile), and it is embodied in an association duly organized, with its secretary, offices, and bankers. Nevertheless, early closing is not the general usage, for Saturday nights still discover the shambles and provision business quarters replete with life and radiant of gas, until midnight chimes the Sabbath in.

Whatever repression may be exercised in the prevention of Sunday trading, whatever exhortations are poured from the pulpit, to discourage drunkenness, nothing is so sure to lead to infraction of the existing laws in this behalf, as the inconsiderate and inhuman habit of paying the artizan the wage of his toil at a late hour on the Saturday.

In any case, even that of the most skilled mechanic, the late hour brings with it a temptation and a fatality, but too seldom overcome.

It has come to my knowledge that there are highly respectable firms, tradesmen, and others, employing very numerous hands, who delegate the office of paymaster to a foreman, or clerk, and that the hard-earned vails of the tired mechanic are paid to him at nine, ten,—ay, at eleven o'clock; and there are instances of such transactions being settled in *public houses!*

If it could be proved that employers were cognizant of such practices, would it not be worse than the tally-shop factory system, so deprecated by provincial senators? As it is, no language of reprobation can be too forcible to stigmatize the diabolical system.

That a public-house should be chosen as a place for disbursement, argues that the pay-clerk has an interest in the unrighteous profits grasped under such circumstances. The later the hour, the longer has the faint expectant had to conflict with his patience. Companions of the tap-room, in the same dilemma, must, while occupying the place, have something *for the benefit of the house;* and how much more (perhaps on an empty stomach), for his own injury, and for the perdition of his family?

Wherever such a system is ordinarily practised, the wife and family soon learn: she or they attend at the accustomed place and hour, trying to save all they can from the demon of drink; but despite the claims on paternity, nay, despite prospective starvation, too much of the week's pay is expended on the draught, at all times too inviting, and, under the anxious circumstances detailed, but too irresistible; and the debauch of Saint Monday is the sure sequel, until the riot of ruin is played out.

Preachers may declaim, and philanthropists may prose against excesses of the poor in this beastly propensity; but until an interdict is placed on late and irregular payment of wages, and until the regulation of these matters become, like the Factory Labour Bill, part and parcel of the law of the land, no thorough reform can be hoped for amongst the working classes.

For such there is no alternative but to make their frugal market on the Sunday morn. The Sabbath sun should rise to cheer the labourer of every other day: he might on that day of remission, if released from the charge of purveying for *his only family dinner*, be enabled to emerge from the tainted alley, and, by recreation beyond the verge of town or city, escape the more polluted contamination of evil associates, and evil habits,—not that the public-house is necessarily the source of malignant influences,—it ought by no means to be so; for it must be *in winter*, the poor man's only resort,—there he meets his equals,—there hears and details all he knows of news, and of interests personal to his section and order of being. This communion, however, can only be held *in moderation* and in *temperance;* and the existing state of tap-rooms (wholly neglected as they are by Government, *except as to the interests of excise*) is but little calculated to school the people, either in morals or right political knowledge and feeling.

A fair day's pay for a fair day's work, is a good English maxim. Let it be rendered at a fair time, and a suitable hour.

Let the quality of the beer and spirits, as well as their quantity and strength, be tested by the police, or some Governmental authority,—the quality, alas, is notoriously bad and unwholesome; but above all, let the strictest scrutiny be imposed upon the vintner who measures out to the customer already intoxicated, one drachm, one scruple more of the body-destroying liquor. A first offence in this regard should be amerced in a heavy penalty; a second, in the *irremediable forfeiture of license.*

To insure the discontinuance of the baneful practice of paying the labourer late on Saturday, but especially to stop the use of public-houses for that purpose, perhaps the best way will be to give to the public the names of all who continue to do so. QUONDAM.

PROVINCIAL NEWS.

Spalding.—At the Corn-Exchange, in course of erection, the contractor, Mr. W. Sharman, has commenced fixing the principals for the roof of the new building: the beams weigh between three and four tons each.

Bury St. Edmunds.—In pulling down the house in Abbeygate-street (late Hine's) for Messrs. Harvey and Hudson's Bank, some fresco (?) painting has been discovered in one of the first-floor chambers. It consists of foliage in a dead green, with lilies and other flowers, and the peacock, squirrel, and snail resting upon it, and above is a border in dull red with grapes, figs, and promegranates. The fresco is painted on the timbers as well as on the plaster, which is flushed between them, and appears by some small remnants to have been afterwards covered with tapestry, and at later periods with successive paper-hangings. It is probably of a date prior to Elizabeth. The house, including the adjoining property, was built on the old plan of a front with wings running backward, and a courtyard between, the windows in the court being of the old mullioned form without transoms, and there is a carved cornice round the top, which is dated 1610.——The site is nearly ready for the foundations of the new bank; the design for which has been prepared, as we are informed, by Mr. Farrow, builder and mason, of Bury. The works will not be executed by Mr. Farrow.——At the Cemetery Chapels the works are progressing.——There is nothing else new to note at Bury.

Chelmsford.—The two rival Corn-Exchange Companies here are proceeding with their object. That which adopts the Black Boy announces that its deed is ready for signature. The other, according to the local *Chronicle*, has deputed the architect and two directors to visit some of the best corn-exchanges in the kingdom, in order to avail itself of the information thus acquired to render the structure which is about to rise in Tindal-square as perfect and commodious as possible.

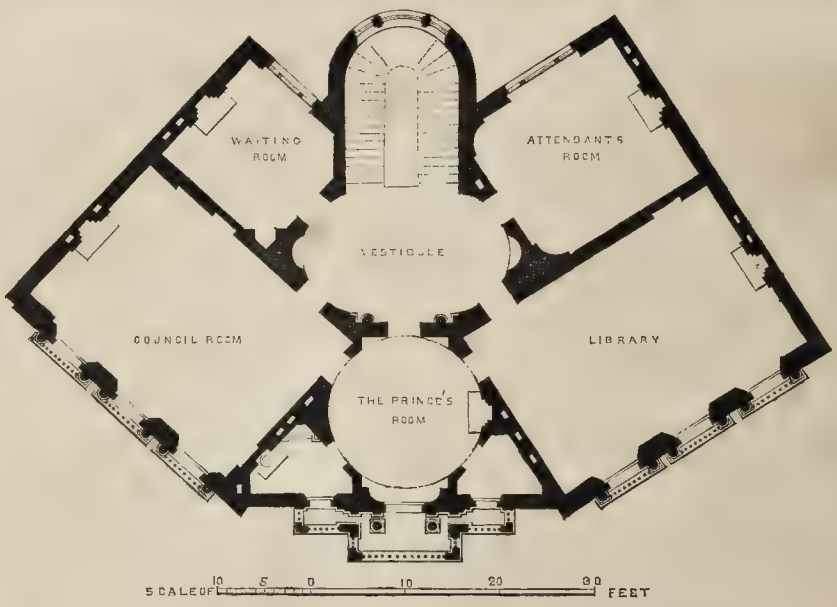
Newport (Isle of Wight).—At a recent meeting of the local Highway Commissioners, for the purpose of receiving tenders for altering the high road near Apse Down, the following amounts, according to the *Hampshire Independent*, were given in by six competitors for performing the work in question:—

Mr. Mayo, of Wales	...£5,454
Mr. Croft, of Brighton ...	... 3,213
Mr. Tycehurst, ditto ...	... 3,029
Messrs. Cox and Brown, Southampton	2,455
Mr. Booker, Isle of Wight ...	... 2,418
Mr. Denness, ditto ...	... 2,275

—"It will be thus seen," adds the paper named, "that the successful contractor has offered to perform the work for 3,179*l.* less than the highest! a sum in itself amounting to no less than 904*l.* over the tender sent in by Mr. Deuness."

Winchester.—The contractors for carrying out the alterations and additions at the barracks here, are about to commence operations. Messrs. Piper, of Pimlico, are the contractors, and the alterations will cause an outlay of about 20,000*l.* exclusive of a large sum for the removal of the present hospital, which is to be built on a more commodious scale, upon a healthier spot.

Cambridge.—The inauguration of the Cambridge waterworks took place on Tuesday before last. Three collecting tanks are sunk in the chalk, one of them at the pumping station, the other two at the springs that supply the Cherry-hinton brook. They are all made to communicate with a well, or lower reservoir, directly under the engine-house, and thence the water is pumped through a 10-inch main to the upper reservoirs, which are on the highest point of the hill known as the "Fifty-acre allotments." These reservoirs are of brick throughout. Tanks and sluices are provided to drain them, as well as delivering valves and screens, through which the water must pass before it reaches the town. They are calculated to hold 1,200,000 gallons, raised by steam power capable of lifting it at the rate of 40,000 gallons per hour, 135 feet high. The water, of which there is an abundant supply, is said by the local *Chronicle* to be remarkable for its softness and purity. The works were designed by Mr. James Simpson, civil engineer, and executed by Mr. George Peters, contractor, under the immediate superintendence of Mr. Lea.



Ashby.—The inhabitants of Ashby have resolved to build a corn exchange. They have formed themselves into a committee, and fixed on a site, with provision for butchers' shambles, and a fish and vegetable market, under the same roof. The project has been gone into under the sanction of Lord Howe. The site fixed on is where the Lamb Inn at present stands (opposite the Post-office). The capital is estimated at 3,000*l.* to be raised in 10*l.* shares, and the company is to be registered under the Joint Stock Companies' Act. The building is intended to be 310 feet long, by 40 feet wide, and to be lighted from the roof. Mr. Stevens, architect, Derby, has been instructed to make preparatory plans.

Doncaster.—At a recent meeting of the local Board of Health, the surveyor, while reporting that the flagging in Printing-office-street had nearly been completed, stated that in Sheffield, Leeds, and other large towns in that part of the country, the self-faced Greenmoor flagging had been extensively used, and that it "was found to answer exceedingly well, being as durable as the other, with a cost, including the kerb, of 1s. per square yard, or 2s. per running yard, less than that which had been lately finished."

Darlington.—Active steps are being taken to establish a branch Government school of art for this town and district. The local *Times* trusts the inhabitants will come forward to defray the expenses of starting what will before long be a self-supporting institution.

Monkwearmouth.—There is now in the process of erection here a large manufactory, for the purpose of making ships' tanks and steam-boilers. The building is about 150 feet in length by 60 feet in breadth. There are eight fires, the smoke of which is conveyed along a flue built on the top of the south wall, leading to a chimney 60 feet in height. The whole of the masonwork has been executed by Messrs. James Young and Co. builders, Sunderland.

Edinburgh.—The City Water Company here has resolved to apply to Parliament for power to bring in a further supply of water from the estate of Colzium, a few miles to the west of the aqueduct at Westrigg. The proposed supply consists of the waters of Colzium, Baddpark, and North Listonshiels; which, it is considered, will furnish a security against a deficiency for many years to come. The present sources of supply, as enumerated by the local *Post*, are Comiston, Swanston, Glencorse, and the Listonshiels, Bavelaw, and Black Springs. Connected with these sources are seven large reservoirs in different parts of the Pentland Hills; and they have furnished, up to a recent period, from 530 or 540 to 600 cubic feet per minute for the use of the inhabitants of Edinburgh, Leith, and Portobello. The excessive drought of the past season, from January downwards, has reduced this quantity to from 420 to 450 cubic feet per minute, arising from the Clubbiedean, Torduff, and Bonally reservoirs having become wholly dried up.

THE OFFICE OF THE DUCHY OF CORNWALL: PLAN OF FIRST-FLOOR.

THE CRYSTAL PALACE AS AN EDUCATOR.

The time is now near at hand when the Crystal Palace must either become a school of art, and the grandest that has ever been instituted, or degenerate into a huge amusement garden, a national theatre for the relaxation of the million, a Vauxhall on a larger scale.

The partial success which attends the present direction of the institution proves in a decided manner that a continual attempt to unite the two purposes must ultimately result in a comparative failure. As long as the whole is a novelty the public, ever anxious for something new, will flock in continued streams to the building, but when that phase in its character no longer exists, the attraction will fade away. That it will always be one of the lions of the day its size alone insures—the marvel of a new mode of building—or alone the wondrous beauty of that grandly majestic garden. Flower-shows and concerts, too, may occasionally infuse something like national life into it, but they must necessarily be periodical.

These are all means to an end, and admirable means no doubt they are; but if the scheme of a popular educator is to be carried out, the directors have a long journey before them, whilst as yet they have only collected the necessary materials for the task. If the original idea of a people's palace—a vehicle of instruction and elevating recreation—a high and holy sympathiser with the hidden affections of a Christian people, be still the ideal of the Crystal Palace, then it is surely time that a decided character for this purpose should be given to the whole exhibition.

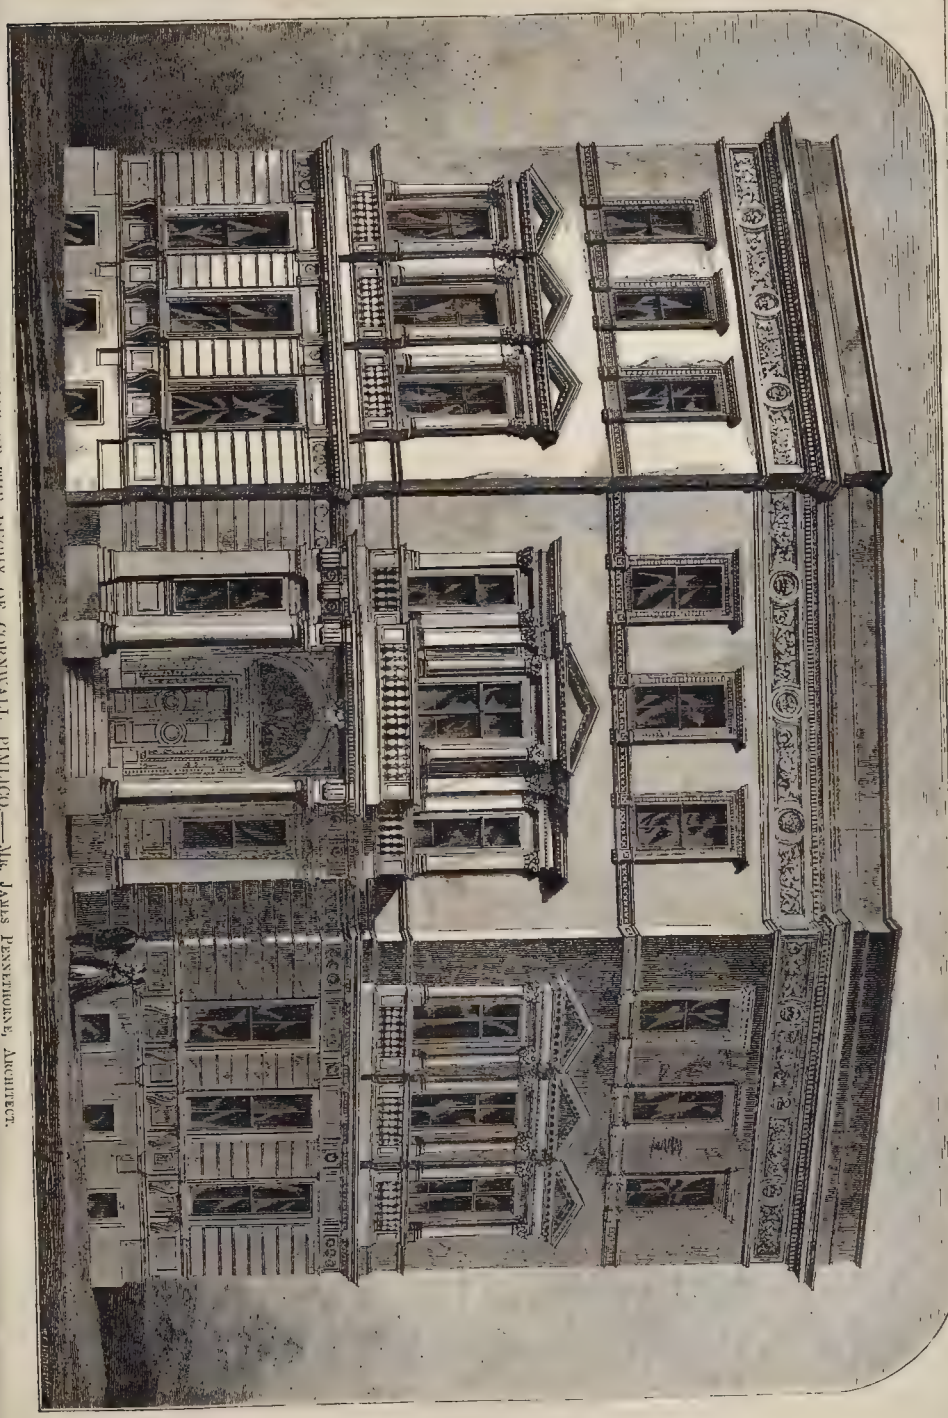
The first feeling of astonishment at the general effect is now wearing away, and giving place to the very proper spirit of inquiry which follows, as to what meaning all the present arrangements of the individual objects and courts can possibly be intended to convey. After the second or third visit, when the whereabouts of the several courts and distinguished statues are ascertained, the visitor who attempts to appreciate the materials for examination systematically commences an inquiry into the courts of styles and schools of sculpture,—the reproduction of the most attractive system of architecture and decoration—and the cherished relics of Grecian sculpture, in order to compare them with the productions of the modern architect and sculptor of every country. This is the manner in which those who study to appreciate the Exhibition endeavour to derive instruction from, and arrive at conclusions concerning, the treasures which it contains. But on commencing the examination, he is surprised to find how few facilities are afforded him for such scrutiny. He finds that the courts, as a whole, have no *progressive* arrangement, but seem to have been placed where they are by mere accident,—that Greek and Roman, French and English, German and Italian sculpture, are distributed more with a view to the approximation in size of the subjects, than distinction of schools, or comparison of merit; and that, in fact, the arrangement of so many beautiful objects is managed so as to *astonish* rather than *educate*, perplex rather than define.

This need not be so. Classification need not give rise to sameness, and would materially assist education. The feelings of those who tremble for the freshness, the lovely disorder, and fairylike confusion of their luxurious lounge, should not be weighed in the balance with the moral culture and intellectual refinement of a whole people.

The Crystal Palace may be looked upon as a huge alphabet, by which the English people are to be taught to read what is true to nature, and beautiful in art. But under existing circumstances, it requires a large amount of pre-existing knowledge of the language to be able to distinguish the *A* from the *B*, and the *B* from the *D*.

It is evident, therefore, that the education of the people has not been the primary consideration in the present arrangements, for had that been the case, a simple and more effective scheme would have been adopted — a scheme which would make the Crystal Palace that which it is so well fitted to become—a school of art, and science, and beauty, and not a mere place of periodical idleness for the throngs of holiday folk, who, unconscious of the riches which surround them, mistake that grand establishment for an immense amusement gallery, revel for a while amidst its scattered treasures, and return to London with a mind confused and a brain bewildered.

WALTER SMITH.



THE OFFICE OF THE DUCHY OF CORNWALL, BUCKINGHAM-GATE.

By an Act passed in the reign of King George III. the office of the Duchy of Cornwall was built and established in Somerset House. This office was wanted for the Commissioners of Inland Revenue, and the Commissioners of Works and Public Buildings thereupon agreed with the representatives of the Prince of Wales, who is also Duke of Cornwall, to purchase a piece of land in Pimlico, close to Buckingham Palace, and to build thereon an office for the duchy, in lieu of the office in Somerset House, under certain arrangements settled by an Act of Parliament passed in the 17th and 18th of Victoria, cap. 93. The new site was part of the hereditary possessions and land revenues of the Crown.

In the session of 1854, Parliament voted 16,889*l.* for carrying out the agreement referred to in this Act, and for other expenses. The plans for the new building were prepared by Mr. Pennethorne, and submitted to competition, and Messrs. Haward and Nixon's tender of 9,377*l.* being the lowest, the contract was made with them for the erection.

The site was purchased by the public from the land revenues at 4,300*l.* It is an awkwardly-shaped piece of ground at the angle where two roads meet, and it will be seen that Mr. Pennethorne has ably met the difficulty in his plan. The fronts are, for the most part, formed in cement, and will be painted stone colour in the spring. The entrance doorway is handsome.

PROPOSED MEMENTO OF SIR HUGH MYDDLETON.—A correspondent draws our attention to a proposal in the *Clerkenwell News*, by "D. H." that the beneficent founder of the New River water-supply should have some monument erected to his memory, and that the top of the new building in Claremont-square, Pentonville-hill, where his statue would stand over his own element, as it may be called, is an appropriate site for such a memorial. It is certainly a just reproach to the Londoners of several generations, past and present, that no such monument has ever been erected to one who spent a large fortune in obtaining for them a bountiful supply of one of the chief necessaries of life, and we heartily second the proposal to erect a suitable monument to Sir Hugh Myddleton.

THE OFFICE OF THE DUCHY OF CORNWALL, PIMLICO.—Mr. James Pennethorne, Architect.

METROPOLIS LOCAL MANAGEMENT ACT AND BUILDERS.

THE following are those clauses in the new Act for the better Local Management of the Metropolis," to which it is more especially desirable, with reference to the Building Act and otherwise, that the attention of builders and architects should be given. The Act itself should be obtained, but we have drawn out these clauses, that they may have the better chance of being read and remembered:—

Vestry or District Board in certain Cases may compel Owners, &c. of Houses to construct Drains into the Common Sewer. Penalty on Owners, &c. for Neglect.

73. "If any house or building, whether built before or after the commencement of this Act, situate within any such parish or district, be found not to be drained by a sufficient drain communicating with some sewer, and emptying itself into the same, to the satisfaction of the Vestry or Board of such parish or district, and if a sewer of sufficient size be within 100 feet of any part of such house or building, on a lower level than such house or building, it shall be lawful for the Vestry or Board, at their discretion, by notice in writing, to require the owner of such house or building forthwith, or within such reasonable time as may be appointed by the Vestry or Board, to construct and make from such house or building into any such sewer a covered drain, and such branches thereto, of such materials, of such size, at such level and with such fall as shall be adequate for the drainage of such house or building, and its several floors or stories, and also of its areas, watercloseta, privies, and offices (if any), and for conveying the soil, drainage, and wash therefrom into the said sewer, and to provide fit and proper paved or impermeable sloped surfaces for conveying surface water thereto, and fit and proper sinks, and fit and proper syphoned or otherwise trapped inlets and outlets for hindering stench therefrom, and fit and proper water supply and water-supplying pipes, cisterns, and apparatus for scouring the same, and for causing the same to convey away the soil, and fit and proper sand-traps, expanding inlets, and other apparatus for hindering the entry of improper substances therein, and all other such fit and proper works and arrangements as may appear to the Vestry or Board, or to their officers, requisite to secure the safe and proper working of the said drain, and to prevent the same from obstructing or otherwise injuring or impeding the action of the sewer to which it leads; and it shall be lawful for the said Vestry or Board to cause the said works to be inspected while in progress, and from time to time during their execution to order such reasonable alterations therein, additions thereto, and abandonment of part or parts thereof, as may to the Vestry or Board or their officers appear, on the fuller knowledge afforded by the opening of the ground, requisite to secure the complete and perfect working of such works; and if the owner of such house or building neglect or refuse, during twenty-eight days after the said notice has been delivered to such owner, or left at such house or building, to begin to construct such drain and other works aforesaid, or any of them, or thereafter fail to carry them on and complete them with all reasonable despatch, it shall be lawful for the Vestry or Board to cause the same to be constructed and made, and to recover the expenses to be incurred thereby from such owner in the manner hereinafter provided."

Provision for combined Drainage of Blocks of Houses.

74. "If it appear to the Vestry or Board of any parish or district that a group or block of contiguous houses, or of adjacent detached or semi-detached houses may be drained and improved more economically or advantageously in combination than separately, and a sewer of sufficient size already exist or be about to be constructed within 100 feet of any part of such group or block of houses, whether contiguous, detached, or semi-detached, it shall be lawful for such Board or Vestry to order that such group or block of houses be drained and improved, as hereinbefore provided, by a combined operation."

No House to be built without Drains constructed to the satisfaction of the Vestry or District Board.
